Use Latest Microsoft AZ-305 Dumps For Smooth Preparation

If you fail AZ-305 exam unluckily, don't worry about it, because we provide full refund for everyone who failed the exam. You can ask for a full refund once you show us your unqualified transcript to our staff. The whole process is time-saving and brief, which would help you pass the next AZ-305 Exam successfully. Please contact us through email when you need us. The AZ-305 question dumps produced by our company, is helpful for our customers to pass their exams and get the AZ-305 certification within several days. Our AZ-305 exam questions are your best choice.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q65-Q70):

NEW QUESTION # 65

You have an Azure subscription that is linked to an Azure Active Directory Premium Plan 2 tenant. The tenant has multi-factor authentication (MFA) enabled for all users.

You have the named locations shown in the following table.

- You have the users shown in the following table.
 - You plan to deploy the Conditional Access policies shown in the following table.
 - For each of the following statements, select Yes if the statement is true. Otherwise, select No.
- NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 66

You have an Azure subscription.

You need to deploy an Azure Kubernetes Service (AKS) solution that will use Windows Server 2019 nodes.

The solution must meet the following requirements:

Minimize the time it takes to provision compute resources during scale-out operations.

Support autoscaling of Windows Server containers.

Which scaling option should you recommend?

- A. horizontal pod autoscaler
- B. Kubernetes version 1.20.2 or newer
- C. Virtual nodes with Virtual Kubelet ACI
- D. cluster autoscaler

Answer: C

Explanation:

Azure Container Instances (ACI) lets you quickly deploy container instances without additional infrastructure overhead. When you connect with AKS, ACI becomes a secured, logical extension of your AKS cluster. The virtual nodes component, which is based on Virtual Kubelet, is installed in your AKS cluster that presents ACI as a virtual Kubernetes node. Kubernetes can then schedule pods that run as ACI instances through virtual nodes, not as pods on VM nodes directly in your AKS cluster.

Your application requires no modification to use virtual nodes. Deployments can scale across AKS and ACI and with no delay as cluster autoscaler deploys new nodes in your AKS cluster.

Diagram Description automatically generated

Note: AKS clusters can scale in one of two ways:

The cluster autoscaler watches for pods that can't be scheduled on nodes because of resource constraints.

The cluster then automatically increases the number of nodes.

The horizontal pod autoscaler uses the Metrics Server in a Kubernetes cluster to monitor the resource demand of pods. If an application needs more resources, the number of pods is automatically increased to meet the demand.

NEW QUESTION # 67

You plan to import data from your on-premises environment to Azure. The data is shown in the following table.

What should you recommend using to migrate the data? To answer, drag the appropriate tools to the correct data sources-Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 68

You need to recommend a solution to generate a monthly report of all the new Azure Resource Manager resource deployment in your subscription. What should you include in the recommendation?

- **A. Azure Activity Log**
- B. Azure Advisor
- C. Azure Monitor action groups
- D. Azure Monitor metrics

Answer: A

Explanation:

Explanation

Activity logs are kept for 90 days. You can query for any range of dates, as long as the starting date isn't more than 90 days in the past.

Through activity logs, you can determine:

- * what operations were taken on the resources in your subscription
- * who started the operation
- * when the operation occurred
- * the status of the operation
- * the values of other properties that might help you research the operation Reference:

<https://docs.microsoft.com/en-us/azure/automation/change-tracking>

NEW QUESTION # 69

Your company has the divisions shown in the following table.

Sub1 contains an Azure App Service web app named App1. App1 uses Azure AD for single-tenant user authentication. Users from contoso.com can authenticate to App1.

You need to recommend a solution to enable users in the fabrikam.com tenant to authenticate to App1.

What should you recommend?

- **A. Configure assignments for the fabrikam.com users by using Azure AD Privileged Identity Management (PIM).**
- B. Enable Azure AD pass-through authentication and update the sign-in endpoint
- C. Configure the Azure AD provisioning service.
- D. Configure Supported account types in the application registration and update the sign-in endpoint.

Answer: A

NEW QUESTION # 70

.....

In this rapid rhythm society, the competitions among talents are growing with each passing day, some job might ask more than one's academic knowledge it might also require the professional Microsoft certification and so on. It can't be denied that professional certification is an efficient way for employees to show their personal Designing Microsoft Azure Infrastructure Solutions abilities. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right AZ-305 Exam Material, which will save your time and money in the preparation of the AZ-305 exam. Our AZ-305 latest questions is one of the most wonderful reviewing Designing Microsoft Azure Infrastructure Solutions study training dumps in our industry, so choose us, and together we will make a brighter future.
