2026 Latest Pass4Leader OGEA-103 PDF Dumps and OGEA-103 Exam Engine Free Share: https://drive.google.com/open?id=1CGI_kTcBC39RY2KJQjnfZ3oIqUJkZH8

If you are new to our website, you can ask any questions about our OGEA-103 study materials. Our workers are very familiar with our OGEA-103 learning braindumps. So you will receive satisfactory answers. What is more, our after sales service is free of charge. So our OGEA-103 Preparation exam really deserves your choice. Welcome to come to consult us. We are looking forward to your coming at any time.

In order to provide a convenient study method for all people, our company has designed the online engine of the OGEA-103 study practice dump. The online engine is very convenient and suitable for all people to study, and you do not need to download and install any APP. We believe that the OGEA-103 exam questions from our company will help all customers save a lot of installation troubles. You just need to have a browser on your device you can use our study materials. We can promise that the OGEA-103 Prep Guide from our company will help you prepare for your exam well. If you decide to buy and use the study materials from our company, it means that you are not far from success.

OGEA-103 Exam Questions Dumps, TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam VCE Collection

All these three OGEA-103 real dumps formats contain the actual and updated TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam OGEA-103 exam questions that will surely repeat in the upcoming OGEA-103 exam and you can easily pass it with good scores. Today is the best time to learn new in-demand skills and upgrade your knowledge. Yes, you can do this easily. Just enroll in the TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam OGEA-103 Exam and start preparation with TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam OGEA-103 exam dumps. The updated, real, and verified The Open Group Dumps are ready for download. Just pay affordable TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam OGEA-103 exam dumps charges and get the exam dumps file in your mailbox and start Pass4Leader OGEA-103 exam preparation.

The Open Group OGEA-103 Exam is a highly sought-after certification for professionals who are looking to establish themselves in the field of Enterprise Architecture. TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam certification is designed to test the knowledge and skills required to understand and apply the principles of Enterprise Architecture using the TOGAF framework. TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam certification exam is a combination of Part 1 and Part 2 of the TOGAF Enterprise Architecture certification.

The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

- A. Phases F
- B. Phases B C and D
- C. Phases G and H
- **D. Phase E**

Answer: D

Explanation:

Explanation

In Phase E of the ADM cycle, building block gaps become associated with work packages that will address the gaps. This phase involves creating an Implementation and Migration Plan that defines a set of work packages and Transition Architectures that will deliver the Target Architecture. Reference: The TOGAF Standard | The Open Group Website, Section 3.2.5 Phase E: Opportunities & Solutions.

NEW QUESTION # 17

Please read this scenario prior to answering the question

You are working as the Chief Enterprise Architect within a law firm specializing in personal injury cases. Many of the firm's competitors have improved their litigation strategies, and efficiency by streamlining their processes using Artificial Intelligence (AI). The CIO has approved a Request for Architecture Work to examine the use of Machine Learning in defining a new AI-driven litigation and finance process for the firm. This process would instruct the lawyers and analysts as to what tasks and portfolio they should work on. The key objectives are to increase task profitability, maximize staff utilization, and increase individual profitability. The CIO has emphasized that the architecture should enable the fast implementation of continuous Machine Learning. The solution will need to be constantly measured for delivered value and be quickly iterated to success.

Some of the partners have expressed concerns about letting the AI make the decisions, others about the risks associated with use of it for the type of service they deliver. The CIO wants to know if these concerns can be addressed, and how risks will be covered by a new architecture enabling AI and Machine Learning.

Refer to the scenario

You have been asked to respond to the CIO recommending an approach that would enable the development of an architecture that addresses the concerns of the CIO and the concerns of the partners.

Based on the TOGAF standard which of the following is the best answer?

- **A. You recommend that an analysis of the stakeholders is undertaken resulting in documenting the stakeholders and their concerns in a Stakeholder Map. The concerns and relevant views should then be defined for each group and recorded in the Architecture Vision document. The requirements will include risk mitigation through regular assessments. This will also allow a supervised agile implementation of the continuous Machine Learning.**
- B. You recommend creation of a set of business models that can be applied uniformly across all architecture projects. The stakeholders will be trained to understand the business models to ensure they can see that their concerns are being addressed. Risk will be addressed once the Security Architecture is developed, which will happen later to avoid slowing down the agility required by the CIO.

- C. You recommend that all possible models be created for each candidate architecture that will enable the AI and Machine Learning solution. This ensures that all the necessary data and detail is addressed. A formal review should be held with the stakeholders to verify that their concerns have been properly addressed by the models. Agility will be considered during Phase G Implementation Governance.
- D. You recommend that a Communications Plan be created to address the key stakeholders, the most powerful and influential partners. This plan should include a report that summarizes the key features of the architecture reflecting their requirements. You will check with each key stakeholder that their concerns are being addressed. Risk mitigation and agility will be explicitly addressed as a component of the architecture being developed.

Answer: A

Explanation:

A Stakeholder Map is a technique that can be used to identify and classify the stakeholders of the architecture work, and to document their key interests, requirements, and concerns. A stakeholder is any person, group, or organization that has a stake in the outcome of the architecture work, such as the sponsor, the client, the users, the suppliers, the regulators, or the competitors. A Stakeholder Map can help to understand the needs and expectations of the stakeholders, and to communicate and engage with them effectively¹ The steps for creating a Stakeholder Map are:

Identify the stakeholders of the architecture work, using various sources and methods, such as interviews, surveys, workshops, or existing documents.

Classify the stakeholders according to their roles, responsibilities, and relationships, using various criteria and dimensions, such as power, influence, interest, attitude, or impact.

Define the concerns and relevant views for each stakeholder group, using various techniques, such as business scenarios, use cases, or value propositions. A concern is a key interest or issue that is relevant to the stakeholder, such as a goal, a problem, a need, or a risk. A view is a representation of the system of interest from the perspective of one or more stakeholders and their concerns.

Record the stakeholders and their concerns in a Stakeholder Map, which shows the mapping between the stakeholder groups, the concerns, and the views. The Stakeholder Map also shows the dependencies, assumptions, and issues related to each stakeholder and concern.

Therefore, the best answer is B, because it recommends the approach that would enable the development of an architecture that addresses the concerns of the CIO and the partners, using the Stakeholder Map technique. The answer covers the following aspects:

An analysis of the stakeholders is undertaken, which involves identifying, classifying, and defining the stakeholders and their concerns.

The stakeholders and their concerns are documented in a Stakeholder Map, which provides a clear and comprehensive picture of the stakeholder landscape and their interests.

The concerns and relevant views are recorded in the Architecture Vision document, which is the output of Phase A: Architecture Vision of the Architecture Development Method (ADM), which is the core process of the TOGAF standard that guides the development and management of the enterprise architecture. The Architecture Vision defines the scope and approach of the architecture work, and establishes the business goals and drivers that motivate the architecture work. The Architecture Vision also involves obtaining the approval and commitment of the sponsors and other key stakeholders, and initiating the Architecture Governance process² The requirements include risk mitigation through regular assessments, which involves identifying, analyzing, and evaluating the risks that may affect the architecture, and determining the appropriate measures or actions to prevent, reduce, or mitigate the risks. Risk mitigation can also involve monitoring and reviewing the risk situation, and communicating and reporting the risk status and actions³ This approach also allows a supervised agile implementation of the continuous Machine Learning, which involves applying agile principles and practices to the architecture development and implementation, such as iterative and incremental delivery, frequent feedback, collaboration, and adaptation. A supervised agile implementation can help to ensure the quality, value, and alignment of the architecture, and to respond to the changing needs and expectations of the stakeholders.

NEW QUESTION # 18

Consider the following chart:

Which important concept for Enterprise Architecture Practitioners does it illustrate?

- A. An Enterprise Architecture must be developed in phases with a limited fixed duration.
- B. ADM phases must be run simultaneously until the relevant information has been produced.
- C. Enterprise Architects must use Gantt charts to communicate with Stakeholders.
- **D. ADM phases must be run in a sequenced approach to produce the Architecture.**

Answer: D

Explanation:

The chart shown is a Gantt chart, which is commonly used for project management to illustrate a project schedule. In the context of

TOGAF (The Open Group Architecture Framework), which is a framework for enterprise architecture, this Gantt chart is demonstrating the sequenced approach to the Architecture Development Method (ADM). The ADM is the core process of TOGAF which provides a tested and repeatable process for developing architectures. The ADM is described as being iterative, over the whole process, between phases, and within phases. For each iteration of the ADM, a fresh decision must be taken about each of the parameters (scope, granularity, time period, and architecture assets).

The ADM consists of a number of phases that have to be followed in sequence:

Preliminary Phase: Framework and principles

Phase A: Architecture Vision

Phase B: Business Architecture

Phase C: Information Systems Architectures, including Data and Application Architectures Phase D: Technology Architecture

Phase E: Opportunities and Solutions Phase F: Migration Planning Phase G: Implementation Governance Phase H: Architecture Change

Management Requirements Management Each phase is dependent on the outputs of the previous phase and the Requirements Management phase runs throughout. The Gantt chart clearly shows the dependency and sequence in which these phases occur, implying that a structured approach is followed to produce the enterprise architecture.

The TOGAF Standard, Version 9.2, a standard of The Open Group

The TOGAF documentation available at <https://publications.opengroup.org/standards/architecture> and

<https://publications.opengroup.org/guides/architecture>

NEW QUESTION # 19

What are the four architecture domains that the TOGAF standard deals with?

- A. Business, Data, Application, Technology
- B. Baseline, Candidate, Transition, Target
- C. Capability, Segment, Enterprise, Federated
- D. Application, Data, Information, Knowledge

Answer: A

NEW QUESTION # 20

Which of the following are the four purposes that typically frame the planning horizon, depth and breadth of an Architecture Project, and the contents of the EA Repository-?

- A. Avant-Garde Big-Bang, Discreet and Cohesive
- B. General Foundational Subordinate and Superior Architecture
- C. Strategy Portfolio Project Solution Delivery
- D. Segment, Capability. Enterprise and End-to-end Target Architecture

Answer: C

Explanation:

Strategy Portfolio Project Solution Delivery are the four purposes that typically frame the planning horizon, depth and breadth of an Architecture Project, and the contents of the EA Repository. They correspond to different levels of abstraction and granularity in the architecture development process. Reference: The TOGAF Standard, Version 9.2 - The Open Group, Section 2.4 Architecture Repository.

NEW QUESTION # 21

.....

It is our promissory announcement on our OGEA-103 exam questions that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our OGEA-103 Preparation braindumps are totally the perfect one. And you can find the comments and feedbacks on our website to see that how popular and excellent our OGEA-103 study materials are.
