

Pass Guaranteed Quiz High Pass-Rate C-CPI-2506 - SAP Certified Associate - Integration Developer Mock Test

P.S. Free 2026 SAP C-CPI-2506 dumps are available on Google Drive shared by Prep4sureExam: <https://drive.google.com/open?id=1zxEwCqBBsXgMQpn5qcne2Kcr9BY1B-9s>

We provide 1 year of free updates. In conclusion, Prep4sureExam guarantees that if you use the product, you will pass the C-CPI-2506 exam on your first try. Its primary goal is to save students time and money, not just conduct a business transaction. Candidates can take advantage of the free trials to evaluate the quality and standard of the C-CPI-2506 Dumps before making a purchase. With the right C-CPI-2506 study material and support team passing the examination at first attempt is an achievable goal.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 3	SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 4	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

2026 Updated C-CPI-2506 Mock Test | C-CPI-2506 100% Free Reliable Test Braindumps

It is very normal to be afraid of the exam, especially such difficult exam like C-CPI-2506 exam. We know that encouragement alone cannot really improve your confidence in exam, so we provide the most practical and effective test software to help you pass the C-CPI-2506 Exam. You can use our samples first to experience the effect of our software, and we believe that you can realize our profession and efforts by researching and developing C-CPI-2506 exam software from samples of C-CPI-2506.

SAP Certified Associate - Integration Developer Sample Questions (Q46-Q51):

NEW QUESTION # 46

What can you use to prevent overload in an OData request and reply call?

- A. HTTP adapter
- **B. Paging**
- C. Stop parameter
- D. Query filter

Answer: B

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options \$top and \$skip to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: OData API | SAP Help Portal, SAP Integration Suite: enrich a payload with OData Service | SAP Blogs

NEW QUESTION # 47

In a Data Store write operation, you want to set an Entry ID by reading a header value from an incoming message. Which notation do you use to implement this?

- A. S{receiverheader}
- **B. \${header.receiver}**
- C. S{receiverheader}
- D. S\${headerreceiver}

Answer: B

Explanation:

In SAP Cloud Integration, dynamic configuration values (headers, properties, body elements) are accessed using Expression Language (EL) notation:

`${header.<headerName>}` # Accesses a message header value.

`${property.<propertyName>}` # Accesses a message property.

`${body}` # Accesses the payload.

Therefore, when you want to set an Entry ID in a Data Store Write operation using a header value, the correct syntax is `${header.receiver}`.

NEW QUESTION # 48

When does the "Trace" log level expire and when will the log files be re-moved?

- A. Expiration. 10 minutes Removal. After 24 hours
- B. Expiration: 15 minutes Removal: After 10 hours
- **C. Expiration: 10 minutes Removal: After 1 hour**
- D. Expiration: 15 minutes Removal: After 24 hours

Answer: C

Explanation:

The "Trace" log level expires after 10 minutes and the log files are removed after 1 hour. The "Trace" log level is the most detailed log level that can be set for an integration flow. It records all the information about the message processing, such as headers, properties, payloads, attachments, and exceptions. However, it also consumes more resources and storage space than other log

levels. Therefore, it is recommended to use it only for troubleshooting purposes and for a short duration. The "Trace" log level can be activated from the Monitor Message Processing view or from the integration flow editor. Reference: Log Levels | SAP Help Portal, Activating Trace Log Level | SAP Help Portal

NEW QUESTION # 49

What are API Management components?Note: There are 2 correct answers to this question.

- A. API Designer
- B. API Entity
- C. Authorization server
- D. Product

Answer: A,D

Explanation:

Key API Management components in SAP Integration Suite:

API Designer # Used to design APIs, import specifications (OpenAPI, RAML), and define metadata.

Product # Groups one or more APIs into a package that can be published to API Business Hub Enterprise.

Other options:

Authorization Server # Part of security infrastructure, not a direct API Management component.

API Entity # Not a defined component; the actual entities are API Proxies, Providers, and Products.

Thus, correct components are API Designer and Product.

NEW QUESTION # 50

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect data type
- B. Incorrect source type
- C. Incorrect source value
- D. Incorrect name

Answer: A

Explanation:

The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs

NEW QUESTION # 51

.....

As the feedbacks from our worthy customers praised that our C-CPI-2506 exam braindumps are having a good quality that the content of our C-CPI-2506 learning quiz is easy to be understood. About some esoteric points, our experts illustrate with examples for you. Our C-CPI-2506 learning quiz is the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing our C-CPI-2506 study guide.
