Highly Authoritative Analytics-DA-201 Learning Question Will Help You Pass Your Exam - Real4test

For the challenging Salesforce Analytics-DA-201 exam, they make an effort to locate reputable and recent Salesforce Analytics-DA-201 practice questions. The high anxiety and demanding workload the candidate must face being qualified for the Salesforce Analytics-DA-201 Certification are more difficult than only passing the Salesforce Analytics-DA-201 exam.

Salesforce Certified Tableau Data Analyst Sample Questions (Q94-Q99):

NEW QUESTION # 94

When a Data Analyst needs to format workbook settings, which options are available in the Format Workbook panel?

- A. Number format and Shading
- B. Dashboard Height and Width pixel settings
- **C. Fonts and Lines**
- D. Fonts and Color Palette

Answer: C

NEW QUESTION # 95

You have the following visualization.

The Last() calculation is set to compute using Table (across)

Which value will appear in the crosstab for the Consumer segment of the year 2018 if you change compute to use Order Date?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

The LAST() function in Tableau returns the number of rows from the current row to the last row in the partition. When you compute using 'Order Date', it will change the partitioning of the calculation. If

'Consumer' in '2018' is the last row in its partition when computed by 'Order Date', then LAST() will return 0 for that cell.

The LAST() function in Tableau is a table calculation that returns the number of rows from the current row to the last row in the partition. The value of LAST() is 0 for the last row, increases by 1 for each row above the last row, and can be negative for rows below the current row if there are such rows in the partition.

In the provided visualization, LAST() is set to compute using Table (across). Changing the compute mode to use "Order Date" will adjust the partitioning of the data upon which the LAST() function is calculated. Since

"Order Date" is likely to be a unique value per row (assuming each order has a unique date), each row becomes its own partition.

For the Consumer segment of the year 2018, if "Order Date" is unique for each row, then the last row in each partition (in this case, each individual row) will have a LAST() value of 0 because there are no other rows in the partition - it's the last row of its own partition.

Therefore, when you change the compute mode of LAST() to use "Order Date", each cell under the Consumer segment for the year 2018 will have the LAST() value of 0, because each order date creates a partition of one, making every row the last in its partition.

NEW QUESTION # 96

You have the following worksheet.

Answer:

Explanation:

NEW QUESTION # 97

You have a table that contains four columns named Order Date, Country, Sales, and Profit.

You need to add a column that shows the day of the week for each row. For example, orders placed on August 31, 2022, will show a day of

Wednesday.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

Answer:

Explanation:

Explanation:

To add a column that shows the day of the week for each row, you should complete the formula as follows:

DATENAME

(
'weekday'
, [Order Date])

The DATENAME function in Tableau returns the name of a specified part of a date or datetime value, such as the year, month, or day. It takes two arguments: the date part and the date. In this question, you want to return the name of the weekday, such as Monday, Tuesday, or Wednesday, for each order date. Therefore, you need to use 'weekday' as the date part and [Order Date] as the date. The formula will return a string value that represents the name of the weekday for each order date.

NEW QUESTION # 98

You have the following dataset.

Customer Name	Sales	Rank
Adrian Barton	10,000	3
Raymond Buch	12,000	2
Miller	12,000	2
Tamara Chand	18,000	1

You need to calculate the ranking shown in the Rank field.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

Answer Area

RANK

RANK_DENSE

RANK_MODIFIED

ROW_NUMBER

salesforce

((Customer Name))

((Sales))

(SUM(Sales))

Answer:

Explanation:

Answer Area

RANK

RANK_DENSE

RANK_MODIFIED

ROW_NUMBER

salesforce

((Customer Name))

((Sales))

(SUM(Sales))

Explanation:

To calculate the ranking shown in the Rank field, you need to use the RANK_UNIQUE function, which returns the unique rank of each value in a partition. You need to specify the expression as SUM([Sales]), which calculates the total sales for each product. You also need to specify the order as descending, which means that the highest sales will have the lowest rank. Finally, you need to specify the restart as every

[Category], which means that the ranking will reset for each category. References: https://help.tableau.com/current/pro/desktop/en-us/functions_functions_tablecalculation.htm https://help.tableau.com/current/pro/desktop/en-us/calculations_calculatedfields_lod_rank.htm

NEW QUESTION # 99

.....

When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultorily. Absorbing the lessons of the Analytics-DA-201 study materials, will be all kinds of qualification examination classify layout, at the same time on the front page of the Analytics-DA-201 study materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study. Saving the precious time users already so, also makes the Analytics-DA-201 Study Materials look more rich, powerful strengthened the practicability of the products, to meet the needs of more users, to make the Analytics-DA-201 study materials stand out in many similar products.
