Salesforce Order Management Administrator Accredited Professional 認定 Order-Management-Administrator 試験問題 (Q29-Q34):

質問 # 29

Which three objects are found within Order Management?

Choose 3 answers

- A. Payment Summary
- B. Fulfillment Order
- C. Warehouse Checklist
- D. Invoice
- E. Shopping Bag

正解: A、B、D

質問 # 30

Which object record is created when customer returns a product after fulfillment?

- A. Fulfillment Order
- B. Order Summary Adjustment
- C. Payment Order Summary
- D. Return Order

正解: D

解説:

The object record that is created when customer returns a product after fulfillment is Return Order. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc. Verified

質問 # 31

A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Payment Method
- B. Order Payment Summary
- C. Payment
- D. Order

正解: B

解説:

The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&type=5

質問 # 32

An administrator needs to ensure that the Orders coming from B2C Commerce honor some business rules which need to be the same in both B2C and Order Management. This validation must happen before the Order Summary object is created. What can the administrator suggest to the developer to implement this requirement?

- A. Handle this in the Commerce System originating the Orders.
- B. Use a SalesforceLabs solution
- C. Use an AppExchange solution
- D. Write an Apex class with the validation rules and expose it as an Invocable Action

正解: A

解説:

The administrator can suggest to the developer to handle this requirement in the Commerce System originating the Orders. This way, the validation rules can be applied before the orders are sent to Order Management via the B2C Commerce Integration. The B2C Commerce Integration imports order data into Order Management and creates Order Summary records based on the order data. The validation must happen before the Order Summary object is created, so it cannot be done in Order Management using Apex or other tools. 質問 # 33

Which two APIs can an admin suggest so that customers can initiate order cancellations and returns from the B2C Commerce storefront and have their action carry out the cancel and return operations in Order Management?

- A. Bulk APIs
- B. Connect APIs
- C. REST APIs
- D. Streaming APIs

正解: B、C

解説:

Two APIs that an admin can suggest so that customers can initiate order cancellations and returns from the B2C Commerce storefront and have their action carry out the cancel and return operations in Order Management are:

Connect APIs. These are RESTful APIs that expose resources in Order Management, such as orders, payments, shipments, etc. They allow customers to perform CRUD (create, read, update, delete) operations on these resources from external systems, such as B2C Commerce.

REST APIs. These are HTTP-based APIs that enable developers to access data in Order Management using standard HTTP methods, such as GET, POST, PUT, PATCH, and DELETE. They allow customers to interact with Order Management resources using JSON or XML formats.
