## UiPath-ADPv1 Exam Course & UiPath-ADPv1 Valid Exam Questions

You may urgently need to attend UiPath-ADPv1 certificate exam and get the certificate to prove you are qualified for the job in some area. If you buy our UiPath-ADPv1 study materials you will pass the test almost without any problems. Our UiPath-ADPv1 study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase. To further understand the merits and features of our UiPath-ADPv1 Practice Engine you could look at the introduction of our product in detail.

## UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.</li> </ul>

## UiPath (ADPv1) Automation Developer Professional Sample Questions (Q73-Q78):

### NEW QUESTION # 73

What is the purpose of the Invoke Code activity in UiPath?

- A. Invokes VB MET or Java code optionally passing it a list of input arguments
- **B. Invokes VB.NET or C# code, optionally passing it a list of input arguments.**
- C. Invokes Java code, optionally passing it a list of input arguments.
- D. Invokes VB MET code optionally passing it a list of input arguments

**Answer: B**

Explanation:

The purpose of the Invoke Code activity in UiPath is to invoke VB.NET or C# code, optionally passing it a list of input arguments. The Invoke Code activity allows the developer to write and execute custom code in VB.NET or C# within a UiPath workflow. The Invoke Code activity has a Code property, where the developer can enter the code to be executed. The Invoke Code activity also has an Arguments property, where the developer can specify the input and output arguments for the code. The Invoke Code activity can be useful for performing complex calculations, manipulating data, or integrating with external libraries or applications that are not supported by the existing UiPath activities. References: [Invoke Code]

### NEW QUESTION # 74

What happens when closing a Remote Debugging Connection while a debugging execution is in progress?

- **A. Debugging execution stops gracefully, then the connection is closed.**
- B. Debugging execution ends in exception, then the connection is closed.
- C. It is not possible to close the connection while debugging is in progress.
- D. The remote robot continues the execution after Studio closes the connection.

**Answer: A**

Explanation:

When you close a remote debugging connection while a debugging execution is in progress, the execution is stopped gracefully on the remote robot and the connection is closed. This means that the robot will finish the current activity and then stop the execution, without throwing any exception or error. This is the recommended way to end a remote debugging session, as it ensures that the robot is in a consistent state and ready for the next execution. References: [Remote Debugging]

### NEW QUESTION # 75

In UiPath Orchestrator: when managing multiple Jobs in a queue, which feature allows operators to dictate the execution sequence by assigning the importance of each Job?

- A. Job Queuing Strategy
- B. Job Dependency Settings
- **C. Job Priority Levels**
- D. Job Execution Order

**Answer: C**

Explanation:

In UiPath Orchestrator, the Job Priority Levels feature allows operators to assign priority to jobs in a queue, thereby dictating their execution sequence based on their importance.

#### NEW QUESTION # 76

What is the correct sequence of steps in a REFramework project that is linked to Orchestrator if an application exception occurs on a Queue Item in the Process Transaction state?

Instructions: Drag the Description found on the "Left" and drop on the correct Step Sequence found on the Right".

**Answer:**

Explanation:

Explanation:

#### NEW QUESTION # 77

A developer has created a string array variable as shown below:

UserNames = {"Jane", "Jack", "Jill", "John"}

Which expression should the developer use in a Log Message activity to print the elements of the array separated by the string ","?

- A. String.Join(UserNames, ", ")
- B. String.Concat(",", UserNames)
- C. String.Concat(UserNames, ",")
- **D. String.Join(",", UserNames)**

**Answer: D**

Explanation:

To print the elements of a string array separated by a specific string, the String.Join method is used in C#.

This method takes two parameters: the first is the separator string and the second is the array to join into a single string.

Given the options and the requirement to separate array elements with a comma and a space (" "), the correct expression to use in a Log Message activity would be:

C: String.Join(" ", UserNames)

This will produce a single string with each element of the UserNames array separated by " " (a comma followed by a space).

#### NEW QUESTION # 78
