VMware Cloud Foundation 9.0 Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

An administrator must obtain an overview of all vSAN and non-vSAN datastores within a VCF environment using VCF Operations. Where should the administrator access this information?

- A. Data Protection & Recovery
- B. Diagnostic Findings
- C. VCF Health
- D. Storage Overview

Answer: D

Explanation:

The Storage Overview dashboard provides visibility into capacity, performance, and health across vSAN and non-vSAN datastores. Administrators can track datastore utilization, latency, throughput, and availability from a single pane of glass.

NEW QUESTION # 42

Which vSphere feature reduces the time required to patch and update multiple ESXi hosts in a cluster by using a centralized repository and automated workflows?

- A. Enhanced vMotion Compatibility (EVC)
- B. vSAN Health Service
- C. Host Profiles
- D. vSphere Lifecycle Manager (vLCM)

Answer: D

Explanation:

vSphere Lifecycle Manager allows administrators to centrally manage ESXi images and automate patching tasks across multiple hosts, streamlining updates while minimizing manual intervention.

NEW QUESTION # 43

An administrator is tasked with migrating a set of virtual machines between data centers using HCX.

To minimize downtime and ensure data consistency, which two HCX migration options should be considered? (Choose two.)

- A. HCX Bulk Migration
- B. HCX Replication Assisted vMotion (RAV)
- C. HCX vMotion
- D. HCX Cold Migration
- E. HCX Network Extension

Answer: E

Explanation:

VM storage policies in a VMware vSphere environment are used to define and enforce specific storage requirements for virtual machines, such as performance (e.g., IOPS), availability (e.g., RAID levels), and redundancy. These policies ensure that VMs are placed on storage that meets their particular needs and that storage resources are utilized effectively.

NEW QUESTION # 44

Which security feature in ESXi ensures that only signed and trusted code can run during the host boot process?

- A. vSphere Encryption
- B. TPM 2.0 Integration
- C. Secure Boot
- D. Lockdown Mode

Answer: C

Explanation:

Secure Boot uses digital signatures to verify the integrity of the ESXi boot loader and kernel modules.

Lockdown Mode restricts remote access, TPM integration stores cryptographic keys, and vSphere Encryption secures VM data at rest, not the boot process itself.

NEW QUESTION # 45

Which of the following tasks can be performed on a virtual machine through vCenter Server?

- A. Create snapshots and revert to them
- B. Modify VM CPU and memory settings
- C. Configure the physical NIC driver on the ESXi host
- D. Clone or template a VM

Answer: A,B,D

Explanation:

Snapshots, cloning, and resource configurations are all managed through vCenter. Configuring the physical NIC driver on the ESXi host (B) is handled at the host level and not specifically within the VM settings in vCenter.
