## Free PDF Efficient ADX-350 - Test Salesforce Certified Hyperautomation Specialist Exam Dump

The ADX-350 study braindumps are compiled by our professional experts who have been in this career for over ten years. Carefully written and constantly updated content of our ADX-350 exam questions can make you keep up with the changing direction of the exam, without aimlessly learning and wasting energy. In addition, there are many other advantages of our ADX-350 learning guide. Hope you can give it a look and you will love it for sure!

## Salesforce Certified Hyperautomation Specialist Exam Sample Questions (Q33-Q38):

### NEW QUESTION # 33

Northern Trail Outfitters (NTO) wants to automate a multi-step process that spans several departments. How do Interactive Steps in Flow Orchestration help NTO involve users at key steps of the process?

- A. They leverage AI processing to automatically interact with the customer and collect customer data.
- B. They allow the user to interact directly with external systems through the Salesforce UI.
- C. They enable users to collaborate on specific work items.
- D. They allow the user to interact with the process in between automated backend steps.

Answer: D

### NEW QUESTION # 34

Northern Trail Outfitters is concerned about security in their Salesforce org regarding their newly created hyperautomation flow that calls a MuleSoft API. A mechanism needs to be implemented that restricts which users can invoke the flow.

Which setting is available to a hyperautomation practitioner that meets this security requirement?

- A. Assign an appropriate profile or permission set to users in the connected app.
- B. Assign an appropriate profile or permission set to users in the external service.
- C. Configure OAuth 2.0 in the connected app.
- D. Configure OAuth 2.0 in the external service.

**Answer: A**

Explanation:

\* Profiles and Permission Sets: Assigning the appropriate profile or permission set to users in the connected app restricts access to the MuleSoft API. This method ensures that only authorized users can invoke the hyperautomation flow.

\* OAuth 2.0 Configuration: Configuring OAuth 2.0 is important for authentication, but it does not directly control which users can invoke the flow. The profile or permission set is used to manage user permissions.

\* External Service Permissions: Assigning permissions in the external service is less relevant than managing permissions within Salesforce, where the flow is executed.

\* Connected App Security: Properly securing the connected app by configuring user profiles and permission sets ensures compliance with security policies and restricts access as required.

### NEW QUESTION # 35

A Salesforce administrator asks for advice on how to build their Salesforce flow. They need to complete several DML actions as part of their Salesforce flow and are running into DML governor limits during testing.

Which two pieces of advice should be given to the Salesforce administrator to improve their flow? (Choose two.)

- A. Avoid putting DML statements inside of For Loop occurrences.
- B. Use the upsert action to reduce the amount of DML statements required during the flow runtime.
- C. Loop through a collection variable to save more records with a single DML statement.
- D. Use DML statements at the end of the flow wherever possible.

**Answer: A,C**

Explanation:

\* Avoid DML in For Loops: Placing DML (Data Manipulation Language) operations inside a loop can quickly exceed Salesforce governor limits, as each iteration performs a separate DML operation. It's best to collect records in a list and perform DML operations outside the loop.

\* Use Collection Variables: By looping through a collection variable and adding records to it, you can perform bulk DML operations, which are more efficient and less likely to hit governor limits.

\* Use Upsert Action: Using the upsert action can reduce the number of DML statements by combining insert and update operations. However, this strategy depends on the specific flow requirements and data structure.

\* DML Statements at the End: Consolidating DML operations to the end of the flow is advisable, but care should be taken to handle errors and exceptions appropriately.

### NEW QUESTION # 36

AnyAirlines is creating a hyperautomation solution that will run any time a record is created in NetSuite and will update a record in Salesforce. Many records present in Salesforce need to be related to the updated record. AnyAirlines wants to automatically update each of these dependent records.

When combined, which two hyperautomation solutions should be used to automate this process without involving IT? (Choose two.)

- A. MuleSoft Composer
- B. MuleSoft RPA
- C. Salesforce Flow
- D. Anypoint Platform

**Answer: A,C**

Explanation:

To automate the process of updating related records in Salesforce when a record is created in NetSuite, combining Salesforce Flow and MuleSoft Composer is ideal:

MuleSoft Composer:

Use MuleSoft Composer to create a flow that triggers when a new record is created in NetSuite. Configure the flow to update the corresponding record in Salesforce. This ensures that changes in NetSuite are automatically reflected in Salesforce.

Salesforce Flow:

Use Salesforce Flow to create a record-triggered flow that updates all dependent records whenever the primary Salesforce record is updated.

This flow can be set to trigger on updates to the primary record and include logic to identify and update all related records.

Combining MuleSoft Composer for integration and Salesforce Flow for in-Salesforce automation ensures that the entire process is streamlined and automated without requiring IT involvement.

Salesforce Flow Documentation

### NEW QUESTION # 37

Northern Trail Outfitters publishes REST APIs to Anypoint Exchange. They write the REST APIs using RAML and share these APIs with internal and external users.

In which language or languages can a user download these APIs?

- A. RAML and Apiary only
- **B. RAML and OAS only**
- C. RAML only
- D. RAML, OAS, and Apiary

**Answer: B**

Explanation:

Users can download REST APIs published to Anypoint Exchange in the following languages:

RAML (RESTful API Modeling Language):

RAML is a modeling language for defining APIs, used by MuleSoft for creating REST APIs.

OAS (OpenAPI Specification):

OAS, also known as Swagger, is another widely-used standard for defining APIs.

MuleSoft supports both RAML and OAS formats, allowing users to choose between these two standards when downloading API definitions.
