As a responsible company, we don't ignore customers after the deal, but will keep an eye on your exam situation. Although we can assure you the passing rate of our ACP-120 study materials nearly 100 %, we can also offer you a full refund if you still have concerns. If you try our ACP-120 Study Materials but fail in the final exam, we can refund the fees in full only if you provide us with a transcript or other proof that you failed the exam.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q56-Q61):

NEW QUESTION # 56

A company-managed project has issue-level security configured, with two security levels. However, Andre only sees one of them in the Security Level dropdown field. Identify a possible reason.

- A. The other level is marked as the default.
- B. Andre does not have Set Issue Security permission.
- C. Andre does not have Edit Issues permission.
- D. The other level is configured for different issue types.

- E. Andre is not in a group or project role.

Answer: B

Explanation:

In a company-managed project with issue-level security configured, the `Set Issue Security` dropdown field allows users to set the security level for an issue, restricting who can view it. If Andre only sees one security level instead of both, the most likely reason is that he lacks the `Set Issue Security` permission (Option C), which is required to view and select security levels in the dropdown.

* Explanation of the Correct Answer (Option C):

* The `Set Issue Security` permission allows users to set or change the security level of an issue.

Without this permission, a user may not see all available security levels in the `Set Issue Security` dropdown, or the field may be hidden or restricted. If Andre lacks this permission, he might only see the default security level (if set) or no options at all, depending on the configuration.

* Exact Extract from Documentation:

`Set Issue Security` permission

The `Set Issue Security` permission allows users to set or change the security level of an issue, which determines who can view it.

Without this permission, users cannot modify the `Set Issue Security` field or may only see a subset of available levels.

To check this permission:

* Go to Project settings > Permissions.

* Verify which users, groups, or roles have the `Set Issue Security` permission. Note: The visibility of security levels in the dropdown also depends on the user's membership in groups or roles defined in the security levels. (Source: Atlassian Support Documentation, "Configure issue security schemes")

* Why This Fits: The `Set Issue Security` permission is directly responsible for allowing users to interact with the `Set Issue Security` field. If Andre lacks this permission, he may not see both security levels, making Option C a likely reason.

* Why Other Options Are Incorrect:

* The other level is configured for different issue types (Option A):

* Issue security levels are not tied to specific issue types; they apply to all issues in a project under the issue security scheme. The configuration of security levels is project-wide, so this is not a valid reason.

* Extract from Documentation:

Issue security levels apply to all issue types in a project using the same issue security scheme. They are not restricted by issue type. (Source: Atlassian Support Documentation, "Configure issue security schemes")

* Andre is not in a group or project role (Option B):

* While security levels may restrict visibility based on groups or project roles, the question is about Andre's ability to see security levels in the dropdown, not about viewing issues. The `Set Issue Security` permission determines whether Andre can see and select levels, not his membership in groups or roles for visibility purposes.

* Extract from Documentation:

Security levels define who can view issues (e.g., users in a group or role). The `Set Issue Security` permission controls who can set the level, not who can view the issue.

(Source: Atlassian Support Documentation, "Configure issue security schemes")

* The other level is marked as the default (Option D):

* Marking a security level as the default ensures it is automatically applied to new issues if no level is specified. However, this does not prevent other levels from appearing in the `Set Issue Security` dropdown for users with the `Set Issue Security` permission.

* Extract from Documentation:

The default security level is applied to new issues if no level is set. All available levels are shown in the `Set Issue Security` dropdown to users with the `Set Issue Security` permission.

(Source: Atlassian Support Documentation, "Configure issue security schemes")

* Andre does not have Edit Issues permission (Option E):

* The `Edit Issues` permission allows users to modify issue fields, but the `Set Issue Security` field is specifically controlled by the `Set Issue Security` permission. A user can have `Edit Issues` permission but still not see security levels if they lack `Set Issue Security`.

* Extract from Documentation:

The `Set Issue Security` permission is separate from `Edit Issues` and specifically controls access to the `Set Issue Security` field.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Additional Notes:

* Another possible reason (not listed) could be that Andre is not in the groups or roles defined for the second security level, limiting its visibility in the dropdown. However, the `Set Issue Security` permission is the most direct cause listed.

* To resolve the issue, check Andre's permissions in Project settings > Permissions and ensure he has `Set Issue Security`.

NEW QUESTION # 57

Gary complains that he is not getting any notifications when issues are updated.

According to the notification helper, he should receive notifications for all issues he is watching. His coworkers confirm they receive those notifications and they regularly update issues that he is watching.

Which update to Gary's personal settings must have occurred (Choose one)

- A. The setting You make changes to the issue was disabled
- **B. The setting Watch your issues was disabled**
- C. The setting Email notifications format was changed
- D. The setting You're watching the issue was disabled

Answer: B

NEW QUESTION # 58

A team of technical writers works in the WRITE project. The project uses a single, shared workflow.

To better match the team's way of working they request a workflow change: The initial status of their project's workflow should be changed from Open to Awaiting Inspiration.

- You navigate to the Workflows section of the administration, update the Name of the status in the workflow designer and publish your change.

What are two implications of this change? (Choose two.)

- **A. Awaiting Inspiration will be created as a new Status in Jira.**
- B. The Open Status will be changed to Awaiting Inspiration in all workflows using that status.
- C. Transitions to the Awaiting Inspiration status will fail until the post functions for those transitions are updated.
- **D. The workflow scheme for the WRITE project will need to be published before the change takes effect.**
- E. Filters and Gadgets that referred to the Open status by name will be broken.

Answer: A,D

NEW QUESTION # 59

One of your teams has noticed a spelling mistake in the name of an issue type.

What should you do before correcting the name of the issue type?

- A. Warn users that dashboard gadgets that refer to the issue type in their configuration will need to be updated with the corrected name.
- B. Warn users that saved filters using the issue type will not be able to find the issue type after the change.
- **C. Update the issue type schemes to refer to the new name.**
- D. Update the workflow schemes for the issue type to use the new name.

Answer: C

Explanation:

NEW QUESTION # 60

Two projects were created as follows:

* OPS1: Created from the Procurement project template.

* OPS2: Created from the Process Control project template. You need to create project OPS3. You want it to have the same components as OPS1 but the same schemes as OPS2. How should OPS3 be created?

- A. With a shared configuration with OPS1 from the Process Control project template
- **B. With a shared configuration with OPS2 from the Procurement project template**

Answer: B

Explanation:

Requirements for OPS3:

* Same Components as OPS1: Components are configurations within a project, not typically part of the shared scheme setup during

creation.

* Same Schemes as OPS2:Schemes (Workflow Scheme, Issue Type Scheme, Screen Schemes, Field Configuration Scheme, Permission Scheme, etc.) define the core configuration and behavior of a project.

How Project Creation Options Work:

* Creating from a Template: Sets up a project with a new set of schemes and configurations based on the chosen template. The new project does not initially share schemes with any other project.

* Creating with Shared Configuration: When you create a project and choose "Share settings with an existing project" (e.g., share with OPS2), the new project (OPS3) uses the exact same scheme objects as the existing project (OPS2). Changes to these schemes will affect both projects. This is the mechanism to ensure OPS3 has the same schemes as OPS2.

Analyzing the Options:

* with a shared configuration with OPS1 from the Process Control project template

* Shared configuration with OPS1: This would give OPS3 the same schemes as OPS1. This contradicts Requirement 2 (needs schemes from OPS2).

* from the Process Control project template: Choosing a template is generally an alternative to sharing configuration. If you share configuration, the template choice is irrelevant for the schemes. This part makes the option confusing, but the core action (sharing with OPS1) is incorrect based on the scheme requirement.

* with a shared configuration with OPS2 from the Procurement project template

* Shared configuration with OPS2: This would give OPS3 the same schemes as OPS2. This satisfies Requirement 2.

* from the Procurement project template: As above, the template choice is confusing when sharing configuration. However, the critical action (sharing schemes with OPS2) aligns with the requirement.

Addressing the Component Requirement:

Neither "creating from a template" nor "creating with shared configuration" will automatically copy the Components from OPS1 to OPS3. Components need to be set up manually within the OPS3 project after it has been created.

Conclusion:

To meet the requirement of having the same schemes as OPS2, you must create OPS3 using the "Share settings with an existing project" option and select OPS2. Option B correctly specifies sharing the configuration with OPS2.

The mention of the template in Option B is likely extraneous or indicates a slightly flawed understanding in the question's options, but the core part "shared configuration with OPS2" is the correct action to satisfy the scheme requirement. The component requirement must be handled separately after project creation.

Therefore, the correct approach described in the options is:

with a shared configuration with OPS2 from the Procurement project template

NEW QUESTION # 61

.....

When you know you will enjoy one year free update after purchase, you may consider how to get the latest ATlassian ACP-120 exam torrent. Here, we will tell you, the PDF4Test system will send the update ACP-120 exam dumps to you automatically. You can pay attention to your payment email. If you find there is update and do not find any update email, do not worry, you can check your spam. If there is still not, please contact us by email or online chat. Besides, if you have any questions about ATlassian ACP-120, please contact us at any time. Our 7/24 customer service will be always at your side and solve your problem at once.
