AP-208 Free Dump Download, Exam AP-208 Vce

Salesforce AP-208 learning materials help you to easily acquire the Financial Services Cloud Accredited Professional AP-208 certification even if you have never touched the relative knowledge before. With our AP-208 Exam Questions, you will easily get the favor of executives and successfully enter the gates of famous companies.

Salesforce Financial Services Cloud Accredited Professional Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which three permission sets grant access or extend permissions for record alerts in Financial Services Cloud (FSC)?

- A. OmniStudio Admin permission set
- B. FSC Foundations permission set
- C. FSC Standard permission set

- D. OmniStudio User permission set
- E. FSC Basic permission set

Answer: B,C,D

Explanation:

Record alerts are a feature of Financial Services Cloud that let users create and display alerts on record pages to highlight important information or actions. Record alerts are based on OmniStudio, a low-code platform for building digital experiences in Salesforce. To access or extend permissions for record alerts in Financial Services Cloud, users need to have one of the following permission sets:

FSC Standard permission set: This permission set grants access to the core features of Financial Services Cloud, including record alerts. Users with this permission set can view and create record alerts on supported objects, such as accounts, contacts, financial accounts, and opportunities¹.

FSC Foundations permission set: This permission set grants access to the common features of Financial Services Cloud that are shared across subverticals, such as retail banking, wealth management, and insurance. Users with this permission set can view and create record alerts on supported objects².

OmniStudio User permission set: This permission set grants access to the OmniStudio features, such as OmniScripts, DataRaptors, Integration Procedures, and Record Alerts. Users with this permission set can view and create record alerts on any object that has the Record Alert component enabled³.

NEW QUESTION # 77

A financial institution has custom security and visibility rules where certain users need to see specific records even though they are not typically engaged in that Account. This includes legal and compliance members who must be engaged for particular deals.

Which Financial Services Cloud capability provides the ability to accommodate this request?

- A. Custom Sharing Rules
- B. Business Rules Engine
- C. Compliant Data Sharing
- D. Interaction Summaries

Answer: C

Explanation:

The Financial Services Cloud capability that provides the ability to accommodate the request of sharing specific records with certain users who are not typically engaged in that account is Compliant Data Sharing.

Compliant Data Sharing is a feature that allows users to share records with other users based on criteria such as record type or field value. Users can create sharing rules for objects such as account, contact, individual, financial account role, opportunity participant role, or case team role. By using Compliant Data Sharing, the financial institution can share records with legal and compliance members who must be engaged for particular deals based on a field value that indicates the deal type.

NEW QUESTION # 78

A retail bank is using Financial Services Cloud to support its operations. The bank has received complaints that its clients' documentation is often submitted late and when clients call, customer service agents are struggling with multiple systems to determine where the documentation is.

Which solution should a consultant suggest the client explore?

- A. The Send Documents flow for Retail Banking
- B. Process Builder to create automatic document requests for missing items
- C. An APEX solution to leverage the SendMail capabilities of Salesforce
- D. A Marketing Cloud integration to manage client communications

Answer: A

Explanation:

The solution that the consultant should suggest the client explore to improve its clients' documentation submission and tracking is the Send Documents flow for Retail Banking. The Send Documents flow for Retail Banking is a prebuilt flow that allows users to send

documents requests to clients via email and track the status of the requests in FSC. The flow uses DocuSign eSignature integration to enable clients to sign and return documents electronically. By using the Send Documents flow for Retail Banking, the consultant can help the client streamline and simplify its document management process and improve its customer service agents' efficiency

NEW QUESTION # 79

While working for an insurance client implementing Financial Services Cloud, an API integration between Salesforce and a risk control system has been configured. The consultant is asked to ensure the correct profiles and permissions were set up for this connection. Which two steps should the consultant take?

- A. Update the System Administrator profile to include the API Only User.
- B. Assign the integration user to the System Administrator profile.
- C. Create a dedicated Integration User.
- D. Create a new custom profile and ensure API Only is selected.

Answer: C,D

Explanation:

To ensure the correct profiles and permissions for an API integration between Salesforce and a risk control system, the consultant should do the following steps:

Create a dedicated Integration User that will be used to authenticate and authorize the API calls between Salesforce and the risk control system. The Integration User should have a unique username, password, and security token that are not shared with other users or systems. The Integration User should also have the minimum permissions and access settings required to perform the integration tasks.

Create a new custom profile and ensure API Only is selected. The API Only option restricts the user from logging in to the Salesforce user interface, but allows the user to access the Salesforce API. The custom profile should also have the appropriate object permissions, field-level security, record types, page layouts, and other settings that are relevant for the integration. The custom profile should be assigned to the Integration User.

NEW QUESTION # 80

In Financial Services Cloud, what is the criteria for commas and symbols to be displayed correctly on the Financial Account Summary component?

- A. User's locale must match user's currency.
- B. User currency must match org default currency.
- C. Account currency must match org default currency.
- D. User's locale and language must match user's currency.

Answer: A

Explanation:

The criteria for commas and symbols to be displayed correctly on the Financial Account Summary component is that user's locale must match user's currency. The locale is a setting that determines how dates, times, numbers, and currencies are formatted and displayed for a user. The currency is a setting that determines how monetary amounts are formatted and displayed for a user. By matching the user's locale with their currency, FSC can ensure that commas and symbols are displayed correctly on the Financial Account Summary component according to the user's preferences and expectations

NEW QUESTION # 81

.....
