The best ITIL-4-Practitioner-Release-Management Real Test Dumps: ITIL 4

Practitioner: Release Management Exam are suitable for you - Actual4dump

Undergoing years of corrections and amendments, our ITIL-4-Practitioner-Release-Management exam questions have already become perfect. They are promising practice materials with no errors. We are intransigent to the quality issue and you can totally be confident about their proficiency sternly. As indicator on your way to success, our practice materials can navigate you through all difficulties in your journey. Every challenge cannot be dealt like walk-ins, but our ITIL-4-Practitioner-Release-Management simulating practice can make your review effective. That is why they are professional model in the line.

Peoplecert ITIL-4-Practitioner-Release-Management Exam Syllabus Topics:

Topic	Details
Topic 1	• Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.
Topic 2	• AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.
Topic 3	• Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.

Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12
A release manager has decided on a policy of not allowing users to choose to accept software updates. What is this an example of?

- A. Continuous integration
- B. A 'push' approach
- C. A 'pull' approach
- D. Continuous delivery

Answer: B

Explanation:
TheITIL 4 Practitioner: Release Managementdocument explains the difference between push and pull approaches in release management:"In a push approach, updates are deployed to users without giving them a choice, often to ensure compliance or security. In a pull approach, users can choose when to adopt updates" (Section 3.2.3).
* Option A (A 'pull' approach) is incorrect because a pull approach allows users to choose when to accept updates, which contradicts the scenario.
* Option B (A 'push' approach) is correct, as the policy of not allowing users to choose means the updates are automatically deployed to them, fitting the definition of a push approach.
* Option C (Continuous delivery) and Option D (Continuous integration) are development practices, not release deployment strategies. Continuous delivery involves making releases available frequently, but it doesn't specify whether users must accept them (push) or can choose (pull).
The scenario describes a push approach, making B the correct answer.

NEW QUESTION # 13
Which activity of the 'release model development and improvement' process is used to standardize the preparation of release instances?

- A. Release execution
- B. Release management approach review and development
- C. Release model review and development
- D. Product architecture and service relationship analysis

Answer: C

Explanation:
The release model development and improvement process aims to create and refine standardizedmodels for releases. TheITIL 4 Practitioner: Release Managementdocument explains:"Release model review and development involves defining and standardizing the structure, contents, and schedule of releases to ensure consistency in the preparation of release instances"(Section 3.2.2).
* Option A (Release management approach review and development) focuses on the overall practice approach, not specifically the preparation of release instances.
* Option B (Release model review and development) directly addresses standardizing the preparation of release instances by defining repeatable models.
* Option C (Product architecture and service relationship analysis) is a supporting activity to understand dependencies, not to standardize release preparation.
* Option D (Release execution) is the process of deploying a release, not developing or standardizing models.
The correct answer is B, as it directly relates to standardizing release preparation through model development.

NEW QUESTION # 14
A release manager has noticed that the organization has many standardized services provided to international organizations. Which aspect of release management will this situation directly affect?

- A. Continuous integration
- B. The release plans
- C. The release models
- D. Continuous delivery

Answer: C

Explanation:
Standardized services provided to international organizations imply a need for consistency andscalability in how releases are managed across diverse contexts. TheITIL 4 Practitioner: Release Management document explains that release models are used to standardize the approach to releases:"Release models define the structure, contents, and schedule of releases... They ensure consistent and repeatable processes, which is particularly important for organizations with standardized services"(Section 3.2.2).
* Option A (The release plans) refers to specific plans for individual releases, which may be affected indirectly but are not the primary aspect impacted by standardization needs.
* Option B (Continuous integration) and Option C (Continuous delivery) are development practices that may interact with release management but are not directly affected by the need for standardization across international services.
* Option D (The release models) is directly affected, as standardized services require well-defined release models to ensure consistency, repeatability, and scalability across international contexts.
The situation directly impacts the design and application of release models to accommodate standardized services globally. Thus, the correct answer is D.

NEW QUESTION # 15
Which is a key input to the release planning and coordination process?

- A. Documented findings on the success of a release
- B. Updates to the continual improvement register
- C. Details about the users who will be affected
- D. Notifications to stakeholders about the release status

Answer: C

Explanation:
The release planning and coordination process in ITIL 4 Release Management requires inputs toensure effective planning and execution of releases. TheITIL 4 Practitioner: Release Managementdocument specifies:"Key inputs to release planning and coordination include details about the users who will be affected, as this helps in scheduling and communicating the release to

minimize disruption"(Section 3.2.1).
* Option A (Documented findings on the success of a release) is an output of a release evaluation, not an input to planning.
* Option B (Updates to the continual improvement register) may inform long-term improvements but isn' t a direct input to planning a specific release.
* Option C (Details about the users who will be affected) is a critical input, as understanding the user base helps tailor the release schedule, communication, and impact mitigation strategies.
* Option D (Notifications to stakeholders about the release status) is an output of the release process, not an input to planning.
The correct answer is C, as user details are essential for effective release planning and coordination.

NEW QUESTION # 16
A service owner is initiating the release planning and coordination process for a complex project. What is an example of the FIRST activity that the service owner should undertake in this instance?

- A. Ensure that the release procedures are appropriate for the particular release under consideration
- B. Test the service components and take remedial action as necessary
- C. Select a release model that fits with the types of changes to be included in the release
- D. Check that an automated notification has been sent to stakeholders

Answer: C

Explanation:
The release planning and coordination process begins with defining the approach for the release. TheITIL 4 Practitioner: Release Managementdocument states:"The first step in release planning and coordination is to select an appropriate release model that fits the types of changes to be included in the release. This ensures that the release approach aligns with the nature and complexity of the changes"(Section 3.2.1).
* Option A (Test the service components) is part of the release execution or testing phase, not the first step in planning.
* Option B (Ensure that the release procedures are appropriate) is a subsequent step after selecting the model, to confirm procedural alignment.
* Option C (Select a release model) is the first activity, as it sets the foundation for how the release will be structured and managed, especially for a complex project.
* Option D (Check that an automated notification has been sent) occurs later, during the communication phase of the release process.
The correct answer is C, as selecting the release model is the initial step in release planning.

NEW QUESTION # 17
......

By focusing on how to help you effectively, we encourage exam candidates to buy our ITIL-4-Practitioner-Release-Management practice test with high passing rate up to 98 to 100 percent all these years. Our ITIL-4-Practitioner-Release-Management exam dumps almost cover everything you need to know about the exam. As long as you practice our ITIL-4-Practitioner-Release-Management test question, you can pass exam quickly and successfully. By using them, you can not only save your time and money, but also pass ITIL-4-Practitioner-Release-Management Practice Exam without any stress. Before you place orders, you can download the free demos of ITIL-4-Practitioner-Release-Management practice test as experimental acquaintance.
