With 312-38 study tool, you are not like the students who use other materials. As long as the syllabus has changed, they need to repurchase learning materials. This not only wastes a lot of money, but also wastes a lot of time. Our industry experts are constantly adding new content to 312-38 exam torrent based on constantly changing syllabus and industry development breakthroughs. We

also hire dedicated staff to continuously update our question bank daily, so no matter when you buy 312-38 Guide Torrent, what you learn is the most advanced. Even if you fail to pass the exam, as long as you are willing to continue to use our 312-38 study tool, we will still provide you with the benefits of free updates within a year.

The EC-Council Certified Network Defender (CND) certification is a popular IT security certification that is designed to validate an individual's skills and knowledge in network security. EC-Council Certified Network Defender CND certification is offered by the International Council of E-Commerce Consultants (EC-Council), which is a globally recognized organization that provides certifications in various fields of IT security. The EC-Council CND certification exam is aimed at individuals who want to demonstrate their expertise in network security and protect their organizations from cyber threats.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q103-Q108):

NEW QUESTION # 103

Fill in the blank with the appropriate term _____ is a free open-source utility for network exploration and security auditing that is used to discover computers and services on a computer network, thus creating a "map" of the network.

Answer:

Explanation:
Nmap

NEW QUESTION # 104

Syslog and SNMP are the two main _____ protocols through which log records are transferred.

- A. Push-based
- B. Host-based
- C. Pull-based
- D. Network-based

Answer: A

NEW QUESTION # 105

FILL BLANK

Fill in the blank with the appropriate term. A _____ network is a local area network (LAN) in which all computers are connected in a ring or star topology and a bit- or token-passing scheme is used for preventing the collision of data between two computers that want to send messages at the same time.

Answer:

Explanation:
Token Ring

Explanation:

A Token Ring network is a local area network (LAN) in which all computers are connected in a ring or star topology and a bit- or token-passing scheme is used in order to prevent the collision of data between two computers that want to send messages at the same time. The Token Ring protocol is the second most widely-used protocol on local area networks after Ethernet. The IBM Token Ring protocol led to a standard version, specified as IEEE 802.5. Both protocols are used and are very similar. The IEEE 802.5 Token Ring technology provides for data transfer rates of either 4 or 16 megabits per second.

Working:

Empty information frames are constantly circulated on the ring. When a computer has a message to send, it adds a token to an empty frame and adds a message and a destination identifier to the frame. The frame is then observed by each successive workstation. If the workstation sees that it is the destination for the message, it copies the message from the frame and modifies the token back to 0. When the frame gets back to the originator, it sees that the token has been modified to 0 and that the message has been copied and received. It removes the message from the particular frame. The frame continues to circulate as an empty frame, ready to be taken by a workstation when it has a message to send.

NEW QUESTION # 106

Which of the following router configuration modes changes terminal settings on a temporary basis, performs basic tests, and lists system information?

- A. Global Config
- B. Interface Config
- C. User EXEC
- D. Privileged EXEC

Answer: C

NEW QUESTION # 107

John is working as a network defender at a well-reputed multinational company. He wanted to implement security that can help him identify any future attacks that can be targeted toward his organization and take appropriate security measures and actions beforehand to defend against them. Which one of the following security defense techniques should be implement?

- A. Proactive security approach
- B. Reactive security approach
- C. Preventive security approach
- D. Retrospective security approach

Answer: A

Explanation:

John should implement a Proactive security approach. This approach is part of the adaptive security strategy that is built on a 4-pronged approach -- Protect, Detect, Respond, and Predict1.

By being proactive, John can anticipate potential threats and vulnerabilities and take steps to mitigate them before they can be exploited. This is in contrast to reactive or retrospective approaches, which deal with threats after they have occurred. The proactive approach is aligned with the Certified Network Defender (CND) program's emphasis on preparing network defenders to identify parts of an organization that need to be reviewed and tested for security vulnerabilities, and how to reduce, prevent, and mitigate risks in the network.
