Standard DA0-002 Answers, DA0-002 Guaranteed Success

We guarantee to you that the refund process is very simple and only if you provide us the screenshot or the scanning copy of your failure marks we will refund you in full immediately. If you have doubts or problems about our DA0-002 exam torrent, please contact our online customer service or contact us by mails and we will reply and solve your problem as quickly as we can. We won't waste your money and your time and if you fail in the exam we will refund you in full immediately at one time. We provide the best DA0-002 Questions torrent to you and don't hope to let you feel disappointed.

Our DA0-002 practice dumps compiled by the most professional experts can offer you with high quality and accuracy practice materials for your success. Up to now, we have more than tens of thousands of customers around the world supporting our DA0-002 Exam Questions. If you are unfamiliar with our DA0-002 study materials, please download the free demos for your reference, and to some unlearned exam candidates, you can master necessities by our DA0-002 training guide quickly.

DA0-002 Guaranteed Success - DA0-002 New Exam Bootcamp

We provide CompTIA DA0-002 web-based self-assessment practice software that will help you to prepare for the CompTIA certification exam. CompTIA DA0-002 Web-based software offers computer-based assessment solutions to help you automate the entire CompTIA Data+ Exam (2025) testing procedure. The stylish and user-friendly interface works with all browsers, including Mozilla Firefox, Google Chrome, Opera, Safari, and Internet Explorer. It will make your certification exam preparation simple, quick, and smart. So, rest certain that you will discover all you need to study for and pass the CompTIA DA0-002 Exam on the first try.

CompTIA Data+ Exam (2025) Sample Questions (Q118-Q123):

NEW QUESTION # 118
A data analyst receives a flat file that includes dates. The analyst needs to calculate the number of days from the dates on the file to the current date. Which of the following is the best way to complete this task?

- A. Use date functions to analyze the data with no conversion.
- B. Validate the date format with logical functions and use date functions to analyze.
- C. Convert data to date format and use date functions.
- D. Transform data to a numerical value and use mathematical functions.

Answer: C

Explanation:
This question pertains to theData Analysisdomain, focusing on date calculations. The task is to calculate the difference between dates

in a file and the current date, requiring proper date handling.
* Convert data to date format and use date functions (Option A): Flat files often store dates as strings (e.g., "2023-01-01").
Converting them to a date format (e.g., using Python's datetime or SQL's TO_DATE) allows the use of date functions (e.g.,
DATEDIFF) to calculate the difference to the current date, which is the best approach.
* Validate the date format with logical functions and use date functions to analyze (Option B):
Validation is unnecessary if conversion handles format issues, making this overly complex.
* Use date functions to analyze the data with no conversion (Option C): Without converting to a date format, date functions may fail
if the data is stored as strings.
* Transform data to a numerical value and use mathematical functions (Option D): This is inefficient and error-prone compared to
using date functions.
The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods," and converting to date
format followed by date functions is the standard method for such calculations.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

NEW QUESTION # 119
Which of the following data repositories stores unstructured and structured data?

- A. Data mart
- B. Data lake
- C. Data store
- D. Data silo

Answer: B

Explanation:
This question falls under theData Concepts and Environmentsdomain of CompTIA Data+ DA0-002, which involves understanding
different types of data repositories and their characteristics. The task is to identify a repository that can store both unstructured and
structured data.
* Data store (Option A): A data store is a general term for any data repository, but it's not specific enough to confirm it stores both
unstructured and structured data.
* Data silo (Option B): A data silo is an isolated data repository, often structured, and not typically designed for unstructured data.
* Data mart (Option C): A data mart is a subset of a data warehouse, focused on structured data for specific business areas, not
unstructured data.
* Data lake (Option D): A data lake is a centralized repository that stores raw data in its native format, including both structured
(e.g., tables) and unstructured (e.g., text, images) data, making it the correct choice.
The DA0-002 Data Concepts and Environments domain includes understanding "different types of databases and data repositories,"
and a data lake is specifically designed to handle both unstructured and structured data.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

NEW QUESTION # 120
Which of the following elements is the most important to include in a dashboard for internal technical audiences?

- A. Key performance indicators
- B. Company branding
- C. Dynamic features
- D. Methodology section

Answer: A

Explanation:
This question pertains to theVisualization and Reportingdomain, focusing on dashboard design for specific audiences. Internal
technical audiences (e.g., data analysts, IT staff) need actionable, data-driven insights.
* Methodology section (Option A): Methodology is important for research reports, not dashboards, especially for technical
audiences who prioritize data.
* Dynamic features (Option B): Dynamic features (e.g., interactivity) are useful but not the most critical element for technical
audiences.
* Key performance indicators (Option C): KPIs provide critical metrics (e.g., system uptime, error rates) that technical audiences
need to monitor and act on, making this the most important element.
* Company branding (Option D): Branding is more relevant for external audiences, not internal technical ones.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and KPIs are essential for technical dashboards.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 4.0 Visualization and Reporting.

NEW QUESTION # 121
A data analyst receives a new data source that contains employee IDs, job titles, dates of birth, addresses, years of service, and employees' birth months. Which of the following inconsistencies should the analyst identify?

- A. Duplication
- B. Equivalence
- C. Parallel
- D. Redundancy

Answer: D

Explanation:
This question falls under theData Governancedomain, focusing on identifying data quality issues. The dataset includes dates of birth and birth months, which suggests a potential inconsistency.
* Redundancy (Option A): The dataset includes both dates of birth (e.g., 1990-05-15) and birth months (e.g., May), which is redundant because the birth month can be derived from the date of birth, indicating a data quality issue.
* Equivalence (Option B): Equivalence isn't a standard data quality term in this context; it might refer to data matching, which isn't the issue here.
* Parallel (Option C): Parallel isn't a recognized data quality term; it might relate to processing, not data inconsistencies.
* Duplication (Option D): Duplication refers to identical records, but the issue here is redundant fields, not duplicate rows.
The DA0-002 Data Governance domain includes "data quality control concepts," and redundancy is a key inconsistency when the same information is stored in multiple forms unnecessarily.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

NEW QUESTION # 122
A data analyst has a dashboard that shows weekly data. For the past few weeks, the data has not updated.
Which of the following is the best way to confirm that the data is current?

- A. Validating that the proper data sources are being used
- B. Removing all filters from the dashboard
- C. Working with a database administrator on query optimization
- D. Setting up a monitoring alert that checks on data freshness

Answer: D

NEW QUESTION # 123
