WGU Information Technology Management QGC1 Sample Questions (Q112-Q117):

NEW QUESTION # 112

What is a wireframe in IT design?

- A. A polished design with visual design and interactivity
- B. A diagram of system data flow without functionality
- C. A basic layout without visual design or interactivity
- D. A detailed coded interface for backend testing

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In IT and UX design, a wireframe is a low-fidelity, structural blueprint of a screen, page, or interface. Its key characteristics are:

It shows the basic layout: placement of menus, buttons, content areas, images, forms, and navigation elements.

It does not focus on visual styling: usually no colors, branding, fonts, or detailed graphics.

It generally has no interactivity: it represents what goes where, not how the system behaves in detail.

Wireframes are used to:

Clarify information hierarchy and navigation flow.

Align stakeholders on the structure of the solution before investing in visual design or development.

Serve as a bridge between requirements and higher-fidelity mockups or prototypes.

This is exactly described by "a basic layout without visual design or interactivity," which matches Option C .

Why the other options are incorrect:

A . A diagram of system data flow without functionality That describes a data flow diagram (DFD), not a wireframe. DFDs focus on data movement, not page layout.

B . A polished design with visual design and interactivity That describes a high-fidelity mockup or interactive prototype, not a wireframe.

D . A detailed coded interface for backend testing That refers to an implemented UI or test harness, which goes far beyond the purpose and fidelity of wireframes.

NEW QUESTION # 113

Which type of memory describes a special type of rewritable memory that is compact and portable?

- A. Random access
- B. Flash
- C. Read-only
- D. Cache

Answer: B

Explanation:

Flash memory is a type of non-volatile rewritable memory that is compact and portable. It is commonly used in USB drives, SSDs, and memory cards. Unlike RAM, which loses data when power is off, flash memory retains stored information even without power.

NEW QUESTION # 114

Which statement describes the analysis phase of the systems development life cycle (SDLC)?

- A. Identifying end-user business requirements and refining project goals into defined functions and operations
- B. Establishing full descriptions of the desired features and operations of the system

- C. Establishing a high-level strategy and goals for an intended project
- D. Physically constructing software and information systems using programming languages

Answer: A

Explanation:

* Analysis Phase in SDLC:

* The analysis phase involves gathering detailed requirements from stakeholders to ensure the system aligns with business needs.

* This phase translates high-level goals into specific functions, operations, and deliverables.

* Key Activities in the Analysis Phase:

* Engaging stakeholders and subject-matter experts.

* Documenting requirements in detail (e.g., user stories, use cases).

* Identifying potential constraints and refining goals.

* Incorrect Options Analysis:

* A. Physically constructing software: Part of the development phase.

* B. Desired features descriptions: Happens in the design phase.

* D. High-level strategy: Belongs to the planning phase.

* "SDLC Analysis Phase Best Practices" (Gartner).

* ITIL Requirement Gathering Framework (Axelos).

NEW QUESTION # 115

What is a feature of a supply chain enterprise resource planning (ERP) system?

- **A. Inventory and material tracking**
- B. Brand awareness via marketing
- C. Reduced lead times
- D. Automated customer service

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A supply chain enterprise resource planning (ERP) system focuses on the flow of materials and products from suppliers through production to customers. One of its fundamental features is inventory and material tracking across different locations and stages in the supply chain.

This feature allows organizations to:

Monitor stock levels in real time

Track materials and products as they move through warehouses, production, and distribution Coordinate purchasing, replenishment, and logistics Improve accuracy in fulfilling orders and planning production By tracking inventory and materials within the ERP system, organizations gain visibility and control over their supply chain operations.

Option A (Reduced lead times) is a desired outcome or benefit that may result from effective supply chain ERP use, but it is not itself a specific system feature.

Option B (Brand awareness via marketing) belongs to marketing and branding functions, not supply chain ERP.

Option D (Automated customer service) is more closely tied to CRM or customer service platforms than to supply chain ERP.

Therefore, the correct feature of a supply chain ERP system is inventory and material tracking.

NEW QUESTION # 116

Which prototyping method demonstrates how a solution operates using various data and business rules as inputs?

- A. Workflow modeling
- **B. Simulation**
- C. Static modeling
- D. Storyboards

Answer: B

Explanation:

Simulation is a prototyping method that replicates how a system or solution would function in real-world scenarios. It allows

businesses to test various data inputs, business rules, and operational conditions before full implementation. This method helps identify potential issues and optimize decision-making.
