Pdf PDII Dumps | Practice PDII Exam Online

It's universally acknowledged that passing the exam is a good wish for all candidates, if you choose PDII study materials of us, we can ensure you that you can pass the exam just one time. We have the professional team to search for and study the latest information for exam, therefore you can get the latest information. Furthermore, the quality and accuracy for PDII Exam briandumps are pretty good. We also pass guarantee and money back guarantee for you fail to pass the exam. Or if you have other exam to attend, we will replace other 2 valid exam dumps for you freely.

Salesforce Platform Developer II Sample Questions (Q160-Q165):

NEW QUESTION # 160
A developer wrote the following method to find all the test accounts in the org:
What should be used to fix this failing test?

- A. Test. fixsdSsarchReaulta [) method to set up expected data
- B. @testsetup method to set up expected data
- C. Teat.loadData to set up expected data
- D. @isTest (SeeAllData=true) to access org data for the test

Answer: A

Explanation:
The best way to fix this failing test is to use the Test.setFixedSearchResults() method to set up expected data. This method allows the developer to specify the records that are returned by the SOSL query in the test context, which mimics the search behavior in the org. The developer can pass a list of record IDs to this method, and then assert that the search results match the expected records. Using @isTest(SeeAllData=true) to access org data for the test is not recommended, as it might cause unpredictable test results or dependencies on the org data. Using @testsetup method to set up expected data is not sufficient, as it will not affect the SOSL query results. Using Test.loadData to set up expected data is also not sufficient, as it will not affect the SOSL query results.

NEW QUESTION # 161
Users report that a button on a custom Lightning web component (LWC) is not saving the data they enter. The button looks to be clicked, but the LWC simply sits there, seemingly doing nothing.
What should the developer use to ensure error messages are properly displayed?

- A. Add a try-catch block surrounding the DML statement.
- B. Use the Database method with a110rNone Set to false.
- C. Add the <apex:messages/> tag to the component.
- D. Add JavaScript and HTML to display an error message.

Answer: D

Explanation:
To ensure error messages are properly displayed in a Lightning web component, the developer should use JavaScript to handle errors in the component's client-side code and use HTML to display the message on the UI. This can be combined with Apex exception handling for server-side operations.

NEW QUESTION # 162
A developer is creating a page in App Builder that will be used in the Salesforce mobile app.
Which two practices should the developer follow to ensure the page operates with optimal performance?
Choose 2 answers

- A. Limit 25 fields on the record detail page.
- B. Limit the number of Tabs and Accordion components.
- C. Limit five visible components on the page.
- D. Analyze the page with Performance Analysis for App Builder.

Answer: B,D

Explanation:
For mobile app pages in App Builder, best practices include limiting the number of heavy components like Tabs and Accordion because they can negatively impact performance due to increased client-side processing and data transfer. Also, using Performance Analysis in App Builder helps in identifying components that may slow down page performance and provides recommendations for improvements. References:
Optimize Performance in the Salesforce Mobile App
Lightning App Builder Performance Analysis

NEW QUESTION # 163

Consider the controller code above that is called from a Lightning component and returns data wrapped in a class.

Consider the controller code above that is called from a Lightning component and returns data wrapped in a class.

The developer verified that the Queries return a single record each and there is error handing in the Lightning component, but the component is not getting anything back when calling the controller getSomeData().

What is wrong?

- A. The member's Name and Option should not have getter and setter.
- B. Instances of Apex classes such as MyDataWrapper cannot be returned to a Lightning component.
- C. The member's Name and Option should not be declared public.
- D. The member's Name and Option of the class MyDataWrapper should be annotated with @AuraEnabled also.

Answer: D

NEW QUESTION # 164

Choose the correct definition for <apex:actionFunction>

- A. Can be associated with an AJAX request (actionFunction/actionSupport/actionPoller) and shows content conditionally depending on the status of the request (in progress/complete). Use the "id" field to specify name; use "status" field on related components to connect them
- B. Adds AJAX support to another component (e.g. onClick, onMouseUp, onFocus, etc.)
- C. Allows for controller methods to be called directly from Javascript. Must be encapsulated in tags. Unlike actionSupport, these functions can be called directly from Javascript code
- D. Sends an AJAX request according to the time interval you specify. If this ever gets re-rendered, it resets
- E. Signifies which components should be processed by the server when an AJAX request is generated

Answer: C

NEW QUESTION # 165

......

Our PDII training braindump is elaborately composed with major questions and answers. We are choosing the key from past materials to finish our PDII guide question. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the PDII Test Question. Then, you will have enough confidence to pass the PDII exam. What are you waiting for? Just come and buy our PDII exam questions!
