As one of the most professional dealer of practice materials, we have connection with all academic institutions in this line with proficient researchers of the knowledge related with the 300-740 Practice Exam to meet your tastes and needs, please feel free to choose. We want to specify all details of various versions. You can decide which one you prefer, when you made your decision and we believe your flaws will be amended and bring you favorable results even create chances with exact and accurate content.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">SAFE Key Structure: This section of the exam measures skills of Network Security Designers and focuses on the SAFE framework's key structural elements. It includes understanding 'Places in the Network'—the different network zones—and defining 'Secure Domains' to organize security policy implementation effectively.

Topic 2	<ul style="list-style-type: none"> • User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 3	<ul style="list-style-type: none"> • Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.
Topic 4	<ul style="list-style-type: none"> • SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.
Topic 5	<ul style="list-style-type: none"> • Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 6	<ul style="list-style-type: none"> • Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 7	<ul style="list-style-type: none"> • Threat Response: This section of the exam measures skills of Incident Response Engineers and focuses on responding to threats through automation and data analysis. It covers how to act based on telemetry and audit reports, manage user or application compromises, and implement response steps such as containment, reporting, remediation, and reinstating services securely.
Topic 8	<ul style="list-style-type: none"> • Application and Data Security This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
Topic 9	<ul style="list-style-type: none"> • Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.

Reliable 300-740 Test Pass4sure, New 300-740 Exam Answers

A variety of UpdateDumps' Cisco dumps are very helpful for the preparation to get assistance in this regard. It is designed exactly according to the exams curriculum. The use of test preparation exam questions helps them to practice thoroughly. Rely on material of the Free 300-740 Braindumps online (easily available) sample tests, and resource material available on our website. These free web sources are significant for 300-740 certification syllabus. Our website provides the sufficient material regarding 300-740 exam preparation.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q170-Q175):

NEW QUESTION # 170

What does SAML/SSO stand for and what is its purpose?

- A. Security Assertion Markup Language / Single Sign-On, to simplify logins across different systems
- B. Secure Access Markup Language / Secure Sign-On, to increase login complexity
- C. Single Access Markup Language / Single Sign-On, to simplify logins across different systems
- D. Security Assertion Markup Language / Secure Sign-Out, to secure logouts across systems

Answer: A

NEW QUESTION # 171

Which mitigation technique does a web application firewall use to protect a web server against DDoS attacks?

- A. Rate-based rules
- B. Packet filtering
- C. Source-specific ACL
- D. Standard ACL

Answer: A

Explanation:

Web Application Firewalls (WAFs) use rate-based rules as one of the primary mechanisms to detect and mitigate Distributed Denial of Service (DDoS) attacks. According to the SCAZT Study Guide, Section 3 (Network and Cloud Security, Pages 74-77), rate-based rules dynamically detect unusual spikes in traffic and can throttle or block connections exceeding predefined thresholds. This form of protection is more adaptive and intelligent than standard ACLs or static filtering, enabling protection against zero-day and volumetric attacks that may not follow known patterns.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 3, Pages 74-77

NEW QUESTION # 172

An engineer is configuring multifactor authentication using Duo. The implementation must use Duo Authentication Proxy and the Active Directory as an identity source. The company uses Azure and a local Active Directory. Which configuration is needed to meet the requirement?

- A. Configure the Identity Source as "SAML" on the Single Sign-On tab, and configure the authentication proxy with the "[cloud]" section.
- B. Configure the Identity Source as "Active Directory" on the Single Sign-On tab in the Duo Admin Panel, and configure the permit list to "Local database".
- C. Configure the Identity Source as "SAML" on the Single Sign-On tab in the Duo Admin Panel, and configure the forwarding proxy as "local" for the Identity Source.
- D. Configure the Identity Source as "Active Directory" on the Single Sign-On tab, and configure the authentication proxy with the "[sso]" section.

Answer: D

Explanation:

When integrating Duo Authentication Proxy with Active Directory for multifactor authentication (MFA), you must: Configure the Identity Source in the Duo Admin Panel as Active Directory (not SAML), since it's using the Authentication Proxy. Configure the authentication proxy settings in the [sso] section to communicate with both AD and the Duo cloud.

This setup allows Active Directory to be the primary identity store while Duo provides the second authentication factor.

User and Device Security, Pages 40-45

NEW QUESTION # 173

Enforcing application policy at the network security edge is crucial for:

- A. Ensuring only authorized applications can access network resources
- B. Allowing all applications to bypass security checks
- C. Decreasing the overall security of the network

- D. Ignoring the security posture of accessing devices

Answer: A

NEW QUESTION # 174

Configuring SAML/SSO is beneficial because:

- A. It disables the need for encryption
- B. It increases the number of passwords a user must remember
- C. It allows users to use the same password across all systems, reducing security
- **D. It simplifies user experience by allowing a single set of credentials for multiple services**

Answer: D

NEW QUESTION # 175

.....

When looking for a job, of course, a lot of companies what the personnel managers will ask applicants that have you get the 300-740 certification to prove their abilities, therefore, we need to use other ways to testify our knowledge we get when we study at college , such as get the 300-740 Test Prep to obtained the qualification certificate to show their own all aspects of the comprehensive abilities, and the 300-740 exam guide can help you in a very short period of time to prove yourself perfectly and efficiently.
