- R81 (CCME) certification can help individuals to advance their careers in the field of cybersecurity and to increase their earning potential.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q87-Q92):

NEW QUESTION # 87

Where should `sx_api_ports_dump.py` command be ran?

- A. SMO Appliance
- B. Management server
- C. Security Group
- **D. Orchestrator**

Answer: D

Explanation:

The `sx_api_ports_dump.py` command should be run on the Orchestrator, which is the device that manages the communication and the configuration of the Security Groups and the SGMs. The command shows the port mapping and the traffic distribution for each Security Group, as well as the backplane bonds and the Orchestrator ports. The command does not work on the Management server, the Security Group, or the SMO Appliance, as they do not have the same role and functionality as the Orchestrator.

NEW QUESTION # 88

Which command is used to set the number of sites in a Maestro environment?

- A. `set maestro configuration orchestrator-site-id`
- **B. `set maestro configuration orchestrator-site-amount`**
- C. `set maestro orchestrator-site-amount`
- D. `set maestro configuration orchestrator-site-number`

Answer: B

Explanation:

Explanation

This command is used to set the number of sites in a Maestro environment, which can be either one or two.

The number of sites determines the site-sync configuration and the failover policies for the Security Groups and the Security Group Members. The default value is one, and it can be changed only before the first Security Group is created.

NEW QUESTION # 89

There are two appliances within the same Security Group. One of them is connected by One downlink only, another one by Two downlinks. Assuming there's no NAT and no VPN, what would be proportion of traffic distribution done by Orchestrator?

- A. 66%/33%
- **B. 33%/66%**
- C. 50%/50%
- D. 100%/0%

Answer: B

NEW QUESTION # 90

There are two 10Gbps dual-port NICs and one 40Gbps NIC installed on a 23800 Appliance in slots 1, 2 and 3 accordingly. Which interfaces should be connected to Orchestrator 1 for downlinks' intra- orchestrator redundancy when using two Orchestrators?

- A. This configuration is not supported
- B. Port 1 in Slot 2 and Port 2 in Slot 1
- **C. Port 1 in Slot 1 and Port 2 in Slot 1**
- D. Any pair of available ports

Answer: C

Explanation:

This configuration likely provides balanced and redundant connectivity for orchestrator redundancy.

NEW QUESTION # 91

What Maestro component is automatically designated the SMO Master?

- **A. The SGM with the lowest member ID (the first one added to the security group.)**
- B. The MDS that pushes policy to the SMO is considered the SMO Master.
- C. The SGM with the highest member ID (the last one added to the security group.)
- D. The first MHO configured is considered the SMO Master.

Answer: A

Explanation:

Explanation

The SMO Master is the SGM that is responsible for synchronizing the configuration and policy with the other SGMs in the security group. The SMO Master is automatically designated as the SGM with the lowest member ID, which is usually the first one added to the security group. The SMO Master can be changed manually if needed.
