

Quiz 2026 Esri EAEP2201–Valid Latest Material

2026 Latest ValidExam EAEP2201 PDF Dumps and EAEP2201 Exam Engine Free Share: <https://drive.google.com/open?id=1Emn5PmYJEKd4LzwfshV-CgDjgw2Xrp-c>

After you purchase our EAEP2201 learning materials, we will still provide you with excellent service. Our customer service is 24 hours online, you can contact us any time you encounter any problems. Of course, you can also send us an email to contact with us on the EAEP2201 Study Guide. We will reply you the first time. As you know, there are many users of EAEP2201 exam preparation. But we work high-efficiently 24/7 to give you guidance.

Esri EAEP2201: Enterprise Administration Professional 2201 Exam is a certification program designed for professionals seeking to prove their expertise in the administration of Esri enterprise GIS software. EAEP2201 exam is intended for IT professionals, GIS managers, and system administrators with experience in Esri software deployment and administration. Passing EAEP2201 exam can help professionals demonstrate their knowledge and skills to potential employers and clients.

To be eligible to take the EAEP2201 Exam, candidates must have a minimum of one year of experience working with ArcGIS Enterprise. They must also have completed the recommended training courses, which include ArcGIS Enterprise Administration: Configuring and Managing ArcGIS Enterprise and ArcGIS Enterprise: High Availability and Disaster Recovery.

EAEP2201 Exam Testking & Certification EAEP2201 Training

What is the measure of competence? Of course, most companies will judge your level according to the number of qualifications you have obtained. It may not be comprehensive, but passing the qualifying exam is a pretty straightforward way to hire an employer. Our EAEP2201 exam practice questions on the market this recruitment phenomenon, tailored for the user the fast pass the examination method of study, make the need to get a good job have enough leverage to compete with other candidates. The quality of our EAEP2201 learning guide is absolutely superior, which can be reflected from the annual high pass rate.

The EAEP2201 exam consists of multiple-choice questions that cover a broad range of topics related to enterprise GIS administration. These topics include system architecture, security, data management, performance optimization, and user management. EAEP2201 exam is designed for experienced GIS professionals who have a deep understanding of GIS concepts and practical experience with enterprise-level GIS systems. Passing the EAEP2201 Exam demonstrates a high level of competence in GIS administration, which is highly valued by employers in industries such as government, utilities, and natural resources management.

Esri Enterprise Administration Professional 2201 Sample Questions (Q30-Q35):

NEW QUESTION # 30

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Enable cached drawing mode
- B. Use service defaults for publishing
- C. Adjust pooling to handle the request
- **D. Increase the max record count**

Answer: D

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000). To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

* Option C would keep the default setting of 1,000, which would not meet the requirement.

* Option D relates to visual performance, not record retrieval.

NEW QUESTION # 31

An ArcGIS Pro user receives the following error when trying to publish to ArcGIS Enterprise:

"Unable to publish to ArcGIS Server, error 001369: failed to create service" The ArcGIS Server logs reveal:

- * Failed to create service
- * Internal server error
- * Unable to instantiate class for XML schema type
- * Invalid XML registry file
- * 390 ArcSOC processes running
- * Server uses only half of available RAM

Which action should the administrator perform?

- A. Increase the non-interactive desktop heap size
- **B. Use more dedicated instances instead of shared**
- C. Scale up the ArcGIS Server machine resources

Answer: B

Explanation:

This issue is consistent with desktop heap exhaustion, especially when a high number of ArcSOC processes (e.g., 390) are running on Windows. Desktop heap is a limited memory resource used for GUI and system object management. When it runs out, services can fail to start and produce XML-related errors.

Increasing the non-interactive desktop heap size in the Windows registry resolves this.

From Esri documentation:

"If the Windows desktop heap size is too low, ArcGIS Server may be unable to create new processes (ArcSOC), causing service failures and related internal server errors."

* Option B is a generic fix and won't address the specific heap exhaustion issue.

* Option C doesn't help if the root issue is OS-level heap size limits.

Reference: ArcGIS Enterprise - ArcSOC process limits and Windows desktop heap size

NEW QUESTION # 32

An organization has an ArcGIS Enterprise deployment but does not have access to ArcGIS Online. The GIS administrator wants to

create a web page that is easy to navigate by non-GIS users but allows these users to interact with, download, and create apps from data.

Which option should the GIS administrator use?

- **A. ArcGIS Enterprise Sites**
- B. ArcGIS Experience Builder
- C. ArcGIS Hub

Answer: A

Explanation:

ArcGIS Enterprise Sites is a capability within ArcGIS Enterprise that enables organizations to create tailored web pages for sharing data and content. These sites are designed to be user-friendly for non-GIS users, allowing them to interact with, download, and create applications from the organization's data. Since the organization does not have access to ArcGIS Online, ArcGIS Enterprise Sites provides the necessary functionality within their existing deployment.

ArcGIS Hub (Option A) is a separate product that requires ArcGIS Online. ArcGIS Experience Builder (Option C) is a tool for creating web applications but does not provide the comprehensive site-building capabilities needed for this scenario.

NEW QUESTION # 33

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- B. Open ArcGIS Server statistics to create a report for commonly used items.
- **C. Run usage reports in Portal for ArcGIS to determine the effect on the organization.**

Answer: C

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

NEW QUESTION # 34

An ArcGIS Enterprise deployment is expanding one of its ArcGIS Server sites from one to three machines because some services now require additional resources. Half the services use a shared instance, and the other half includes dedicated instances.

What will happen to the minimum number of ArcSOCs running on the site?

- **A. Three times as many ArcSOCs will be running**
- B. The same number of ArcSOCs will be running
- C. One and a half times as many ArcSOCs will be running

Answer: A

Explanation:

When expanding an ArcGIS Server site from one to three machines, the number of ArcSOC processes (service instances) will increase proportionally. For dedicated instances, each service's minimum and maximum instances are configured per machine, so tripling the number of machines will triple the number of dedicated ArcSOCs. For shared instances, the shared instance pool runs on each machine, and the number of shared instances is configured per machine. Therefore, the total number of ArcSOCs (both dedicated and shared) will be approximately three times greater after the expansion.

NEW QUESTION # 35
