## AP-202 Exam Torrent: B2B Commerce for Developers Accredited Professional & AP-202 Practice Test

With so many methods can boost individual competitiveness, people may be confused, which can really bring them a glamorous work or brighter future? We are here to tell you that a AP-202 certification definitively has everything to gain and nothing to lose for everyone. You might have seen lots of advertisements about AP-202 learning question, there are so many types of AP-202 exam material in the market, why you should choose us? Our reasons are as follow. Our AP-202 test guide is test-oriented, which makes the preparation become highly efficient.

## Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q216-Q221):

### NEW QUESTION # 216

Which two practices are allowed when it comes to naming a Lightning Web Components folder and associated files?

- A. Including whitespace
- B. Beginning with a lowercase letter
- C. Using a single underscore
- D. Using a single hyphen (dash)

**Answer: B,D**

Explanation:

When naming a Lightning Web Components folder and associated files, Salesforce best practices allow the name to begin with a

lowercase letter and to use a single hyphen (dash) for compound names. Whitespace and underscores are not recommended in the naming convention. This is in line with web standards for custom elements. More details can be found in the Salesforce LWC documentation on naming conventions: [Salesforce LWC Naming Conventions](#).

### NEW QUESTION # 217

Which two items are required for a developer to bring picklist values into a Lightning Web Component?

- A. `import { getPicklistValues } from 'lightning/uiObjectInfoApi';`
- B. `import { wire } from 'lwc';`
- C. `import { picklistValues } from 'lightning/uiObjectInfoApi';`
- D. `import { LightningElement, wire } from 'lwc';`

**Answer: A,D**

Explanation:

To bring picklist values into a Lightning Web Component (LWC), a developer needs to import specific modules from the `lwc` and `lightning/uiObjectInfoApi` namespaces. The `getPicklistValues` function from the `lightning/uiObjectInfoApi` module is used to fetch the picklist values based on record type and field metadata. Additionally, importing `{ LightningElement, wire }` from `lwc` is essential for defining the LWC class and using the `@wire` decorator to wire the `getPicklistValues` to a property or function. Salesforce documentation on LWC and utilizing the `uiObjectInfoApi` provides clear guidelines on how to implement this functionality.

### NEW QUESTION # 218

Northern Trail Outfitters (NTO) wants to be able to reference historical data in another system from the Salesforce user experience as read-only, but does not want to import the data into the org or incur storage costs. What is one product feature that could accomplish this?

- A. External Objects
- B. External SOQL queries in Apex code
- C. Big Objects
- D. Lightning Out

**Answer: A**

Explanation:

The correct answer is External Objects. External objects are similar to custom objects, except that they map to data that's stored outside your Salesforce org<sup>1</sup>. You can use external objects to access data in real time via web service callouts, without copying the data into your org<sup>1</sup>. External objects are read-only by default, but you can enable write operations for some data sources<sup>1</sup>.

Big Objects are not the correct answer. Big objects allow you to store and manage massive amounts of data on the Salesforce platform. However, big objects are not suitable for referencing historical data in another system, as they require importing the data into the org and incur storage costs.

Lightning Out is not the correct answer. Lightning Out is a feature that lets you run Lightning components in any container outside the Salesforce platform. However, Lightning Out does not provide a way to reference historical data in another system, as it is mainly used for embedding Lightning components in other web pages or apps.

External SOQL queries in Apex code are not the correct answer. External SOQL queries are a way to query data from external data sources using SOQL syntax in Apex code. However, external SOQL queries require defining an external data source and an external object first, so they are not a product feature by themselves, but rather a way to use external objects in Apex code. ### NEW QUESTION # 219

A developer is implementing an Inventory class for checkout. All the error states have been handled and now the developer needs to take the next step to indicate that inventory is available for all of the items and amounts in the cart. What should the next step be?

- A. Return `sfdc_checkout.IntegrationStatus.Status.SUCCESS`
- B. Return `sfdc_checkout.InventoryStatus.SUCCESS`
- C. Return `TRUE`
- **D. Return `sfdc_checkout.InventoryStatus.Status.SUCCESS`**

**Answer: D**

Explanation:

When implementing an Inventory class for checkout and indicating that inventory is available for all items and amounts in the cart, the correct step is to return `sfdc_checkout.InventoryStatus.Status.SUCCESS`. This indicates to the checkout process that the inventory check has passed and the items are available. Salesforce documentation on customizing inventory validation in the checkout process would detail the expected return types and values, ensuring that developers implement the inventory checks in a manner consistent with the platform's requirements.

### NEW QUESTION # 220

A developer needs to loop through a series of child components which are tiles. What is the correct syntax for this if the child component is called `appTile`?

- **A. `<for:each items={appTiles} item={appTile}>`**
- B. `<for:each items={appTiles} item={appTile}>`
- C. `<for:each items={appTiles} item={appTile}>`
- D. `<for:each items={appTiles} item={appTile}>`

**Answer: A**

Explanation:

The correct syntax for looping through a series of child components which are tiles is option A. Option A uses the `for:each` directive to iterate over a collection of items and render a template block for each item. The `for:each` directive requires an expression that evaluates to an array or an iterable object and an item alias that represents the current item in the iteration. The item alias can be used to access the item's properties or pass them to child components. In option A, the expression is `appTiles`, which is an array of objects that represent app tiles, and the item alias is `appTile`, which represents the current app tile object in the iteration. The `appTile` object's properties, such as `name`, `description`, and `icon`, are passed to the `app-tile` child component using attributes. Option B is incorrect because it uses an invalid syntax for the `for:each` directive. The `for:each` directive requires a colon (`:`) after the `for` keyword, not an equal sign (`=`). Option C is incorrect because it uses an invalid syntax for the `for:each` directive. The `for:each` directive requires an item alias that represents the current item in the iteration, not a key alias that represents the current index in the iteration. Option D is incorrect because it uses an invalid syntax for the template tag. The template tag requires a closing tag (`</template>`), not a self-closing tag (`<template/>`). Salesforce Lightning Web Components Developer Guide: Iterate Over a Collection, Lightning Web Components Developer Guide: Template Syntax

### NEW QUESTION # 221

.....

The chance of making your own mark is open, and only smart one can make it. We offer AP-202 exam materials this time and support you with our high quality and accuracy AP-202 learning quiz. Comparing with other exam candidates who still feel confused about the perfect materials, you have outreached them. So it is our sincere suggestion that you are supposed to get some high-rank practice materials like our AP-202 Study Guide.

**Customized AP-202 Lab Simulation:** [https://www.braindumpsvce.com/AP-202\\_exam-dumps-torrent.html](https://www.braindumpsvce.com/AP-202_exam-dumps-torrent.html)

Salesforce AP-202 Exam Prep So you can rest assured purchase, As most of customers have great liking for large amounts of information, Customized AP-202 Lab Simulation - B2B Commerce for Developers Accredited Professional exam study material provides free renewal in one year after purchase to cater to the demand of them, Salesforce AP-202 Exam Prep It is never too late to learn something, Salesforce AP-202 Exam Prep So don't worry you'll lose your money.

Increasing complexity is unsustainable, It helps test takers take the final B2B Commerce for Developers Accredited Professional (AP-202) exam without making mistakes, So you can rest assured purchase.
