## Valid SAP C-CPI-2506 Exam Testking, Latest C-CPI-2506 Exam Online

Prep4sureExam offers web-based C-CPI-2506 practice exams and desktop SAP Certified Associate - Integration Developer (C-CPI-2506) practice test software so that our customers can give unlimited SAP C-CPI-2506 practice tests and make themselves perfect by tracking their mistakes. The progress of previously given SAP Certified Associate - Integration Developer (C-CPI-2506) practice tests are saved in the history so that the customers can assess it and avoid mistakes in future exams and pass SAP Certified Associate - Integration Developer (C-CPI-2506) certification exam easily.

## SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q41-Q46):

### NEW QUESTION # 41

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. A local installation is not required.
- B. Integration processes can be developed offline.
- C. Predefined scenarios can be used out-of-the-box.
- D. Customer-to-Customer(C2C) integrations can be developed

**Answer: A,C**

Explanation:

Some advantages of the cloud integration capability within SAP Integration Suite are:

A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.

Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

### NEW QUESTION # 42

In a Content Modifier, you want to set up a call to the message body of the previous Content Modifier. Which notation do use to implement this?

- A. S{body.in}
- B. S{in body}
- C. S[bodyin]
- D. S(inbody)

**Answer: B**

Explanation:

To access the message body of the previous Content Modifier step in an integration flow, you must use the notation S {in body) in the current Content Modifier step. This notation means that you want to read the value from the in-message body of the exchange container. The exchange container is used to store additional data besides the message that is being processed by SAP Integration Suite. It has two message containers: in-message and out-message. The in-message contains the original message that was received by the integration flow, while the out-message contains the modified message that will be sent by the integration flow. Reference: Content Modifier Basics | SAP Help Portal, Exchange Container | SAP Help Portal

#### NEW QUESTION # 43

Which of the following data types can use for an exchange property in a content modifier? Note: There are 2 correct answers to this question.

- A. java.lang.integer
- B. java.lang.String
- C. java.lang.string
- D. java.lang.Integer

**Answer: B,D**

Explanation:

In SAP Cloud Integration, when configuring Exchange Properties in a Content Modifier, supported Java data types include: java.lang.String # The most common type.

java.lang.Integer # Numeric properties can be stored.

Other options:

java.lang.string and java.lang.integer # Invalid, because Java types are case-sensitive.

Thus, correct types are java.lang.Integer and java.lang.String.

#### NEW QUESTION # 44

What kind of editor can you use to manipulate integration flows?

- A. Graphical editor
- B. Code editor
- C. Command-line editor

**Answer: A**

Explanation:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).

Thus, the editor is the Graphical editor.

#### NEW QUESTION # 45

When does the "Trace" log level expire and when will the log files be re-moved?

- A. Expiration: 15 minutes Removal: After 10 hours
- B. Expiration: 15 minutes Removal: After 24 hours
- C. Expiration: 10 minutes Removal: After 24 hours
- D. Expiration: 10 minutes Removal: After 1 hour

**Answer: D**

Explanation:

The "Trace" log level expires after 10 minutes and the log files are removed after 1 hour. The "Trace" log level is the most detailed
