Salesforce Sample Questions (Q89-Q94):

NEW QUESTION # 89

以下のコンポーネントコードと要件を参照してください。

□

- A. □
- B. □
- C. □
- D. □

Answer: D

Explanation:

Based on the component code and requirements, the change that should be made to the Lightning web component is option B. This option adds a new column for the MailingAddress field to the columns attribute in the javascript file, and also adds the

MailingAddress field to the fields attribute in the HTML template file. This way, the Lightning web component can display the contacts' mailing addresses in the lightning-datatable component, as long as the Apex controller class returns the MailingAddress field in the query result. Option A would not work, as it only adds the MailingAddress field to the fields attribute in the HTML template file, but not to the columns attribute in the javascript file. Option C would not work, as it only adds the MailingAddress field to the columns attribute in the javascript file, but not to the fields attribute in the HTML template file. Option D would not work, as it adds the MailingAddress field to the wrong place in the columns attribute in the javascript file, and also adds an unnecessary comma after the last column definition. NEW QUESTION # 90

Universal Containers (LIC) は、顧客がコンテナに関する問題を記録できるようにする顧客コミュニティを開発したいと考えています。コミュニティは、ドイツ語とスペイン語を話す顧客のためにも機能する必要があります。UC は、Salesforce を使用すると国際的なコミュニティを簡単に作成できると聞き、サイトを構築する開発者を雇いました。

開発者はサイトを多言語化するには何を使用する必要がありますか？

- A. カスタム ラベルを使用して、カスタム メッセージが適切に翻訳されていることを確認します。
- B. カスタム メタデータを使用してカスタム選択リスト値を変換します。
- C. カスタム オブジェクトを使用してカスタム選択リスト値を変換します。
- D. カスタム設定を使用して、カスタム メッセージが適切に翻訳されるようにします。

Answer: A

Explanation:

Custom labels are used for translating text strings in Salesforce that need to be presented in multiple languages. They support translations and can be referenced in Aura components, Visualforce pages, and Apex code.

NEW QUESTION # 91

Universal Containers には、取引先が顧客としてマークされたときにアカウントプランレコードを作成する取引先に対する Apex トリガーがあります。

最近、レコードによってトリガーされるフローが追加され、アカウントが顧客としてマークされるたびに、「以降の顧客」日付フィールドが今日の日付で更新されるようになりました。フローの追加以来、アカウントがマークされるたびに 2 つのアカウントプランレコードが作成されます。顧客として、これが起こる原因は何でしょうか？

- A. フローは、レコードの作成時と編集のたびに評価するように構成されています。
- B. フローは「レコードの更新」要素を使用するように構成されています。
- C. Apex トリガは、確実に 1 回だけ起動するために静的変数を使用しません。
- D. Apex トリガは一括安全ではなく、for ループ内で insert を呼び出します。

Answer: A

Explanation:

The reason why two Account Plan records are created whenever the Account is marked as a Customer is that the flow is configured to evaluate when a record is created and every time it is edited. This means that the flow will run both when the Account is inserted and when the Account is updated by the Apex trigger. Since the flow and the trigger both create an Account Plan record, this results in two Account Plan records being created for the same Account. To avoid this, the flow should be configured to evaluate only when a record is created or only when specified changes are made to the record. This way, the flow and the trigger will not conflict with each other and only one Account Plan record will be created.
