Realistic SPLK-1005 Dumps Free - Splunk Cloud Certified Admin Test Fee

Our SPLK-1005 Exams preparation software allows you to do self-assessment. If you have prepared for the SPLK-1005 exam, you will be able to assess your preparation with our preparation software. The software provides you the real feel of an exam, and it will ensure 100% success rate as well. You can test your skills in real exam like environment. If you are not getting the desired results, you will get 100% money back guarantee on all of our exam products.

Splunk SPLK-1005 Certification Exam covers a wide range of topics, including cloud deployment architecture, data inputs and forwarders, search and reporting, index management, user authentication and access control, and monitoring and troubleshooting. These topics are essential for any professional looking to become a certified Splunk Cloud administrator.

Splunk SPLK-1005 certification is designed for individuals who want to become proficient in the administration of the Splunk Cloud platform. Splunk Cloud Certified Admin certification exam tests the candidate's knowledge and skills in various areas such as managing indexes, configuring Splunk Cloud apps, users and permissions, monitoring the platform's health, and troubleshooting common issues. Splunk Cloud Certified Admin certification is a testament to the candidate's expertise in administering Splunk Cloud, which is a cloud-based version of the Splunk platform that enables organizations to collect, analyze, and visualize machine data.

Splunk Cloud Certified Admin Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is the name of the component that acts as a data manager and sends data to Splunk Cloud Platform indexers?

- A. Universal forwarder
- B. License master
- C. Deployment server
- **D. Heavy forwarder**

Answer: D

NEW QUESTION # 53

Consider the following configurations:

```
$SPLUNK_HOME/etc/apps/unix/local/inputs.conf

[monitor:///var/log/secure.log]
sourcetype = access_combined
index = security

$SPLUNK_HOME/etc/apps/search/local/inputs.conf

[monitor:///var/log/secure.log]
host = logsvr
sourcetype = linux_secure
```

What is the value of the sourcetype property for this stanza based on Splunk's configuration file precedence?

- A. linux_secure, access_combined
- B. access_corabined
- C. NULL, or unset, due to configuration conflict
- **D. linux_aacurs**

Answer: D

Explanation:

When there are conflicting configurations in Splunk, the platform resolves them based on the configuration file precedence rules. These rules dictate which settings are applied based on the hierarchy of the configuration files.

In the provided configurations:

* The first configuration in \$SPLUNK_HOME/etc/apps/unix/local/inputs.conf sets the sourcetype to access_combined.

* The second configuration in \$SPLUNK_HOME/etc/apps/search/local/inputs.conf sets the sourcetype to linux_secure.

Configuration File Precedence:

* In Splunk, configurations in local directories take precedence over those in default.

* If two configurations are in local directories of different apps, the alphabetical order of the app names determines the precedence.

Since "search" comes after "unix" alphabetically, the configuration in \$SPLUNK_HOME/etc/apps/search/local/inputs.conf will take precedence.

Therefore, the value of the sourcetype property for this stanza is linux_secure.

Splunk Documentation References:

* Configuration File Precedence

* Resolving Conflicts in Splunk Configurations

This confirms that the correct answer is C. linux_secure.

NEW QUESTION # 54

Which command can be used to install the Splunk universal forwarder credentials package on the universal forwarder machine?

- A. splunk add forwarder-credentials <path_to_credentials_package>

- B. splunk add app <path_to_credentials_package>
- C. splunk install forwarder-credentials <path_to_credentials_package>
- D. splunk install app <path_to_credentials_package>

Answer: D

NEW QUESTION # 55

When is data deleted from a Splunk Cloud index?

- A. When data is deleted via the Splunk Cloud Admin GUI.
- B. When TA_Delete is downloaded and enabled from SplunkBase.
- C. When buckets roll to frozen, without a defined archive.
- D. When the daleteindexcommand is executed from the CLI.

Answer: C

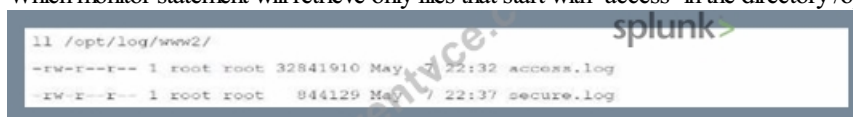

Explanation:

In Splunk Cloud, data is deleted from an index when the buckets roll to the frozen stage and no archive is defined. When data in a bucket reaches the frozen stage, it is deleted unless a frozen-to-archival script is configured to move the data elsewhere. This process is part of the index lifecycle management in Splunk.

Splunk Documentation Reference: Managing Indexes

NEW QUESTION # 56

Which monitor statement will retrieve only files that start with "access" in the directory /opt/log/www2/?

```
ll /opt/log/www2/
-rw-r--r-- 1 root root 32841910 May  7 22:32 access.log
-rw-r--r-- 1 root root 844129 May  7 22:37 secure.log
```

- A. [monitor:///opt/log/www2/access*]
- B. [monitor:///opt/log/.../]
- C. [monitor:///opt/log/www2/]
- D. [monitor:///opt/lug/.../access]

Answer: A

Explanation:

The correct monitor statement to retrieve only files that start with "access" in the directory /opt/log/www2/ is [monitor:///opt/log/www2/access*]. This configuration specifically targets files that begin with the name "access" and will match any such files within that directory, such as "access.log".

Splunk Documentation Reference: Monitor files and directories
