## Top Tips for Stress-Free APMG-International ISO-IEC-27001-Foundation Exam Preparation

There are different ways to achieve the same purpose, and it's determined by what way you choose. A lot of people want to pass APMG-International certification ISO-IEC-27001-Foundation exam to let their job and life improve, but people participated in the APMG-International Certification ISO-IEC-27001-Foundation Exam all knew that APMG-International certification ISO-IEC-27001-Foundation exam is not very simple. In order to pass APMG-International certification ISO-IEC-27001-Foundation exam some people spend a lot of valuable time and effort to prepare, but did not succeed.

### APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q10-Q15):

#### NEW QUESTION # 10

Which ISMS documentation is part of the minimum scope of documented information required to be managed and controlled?

- A. Third party information security awareness materials
- B. A statement of correspondence between other ISO standards and the ISMS
- C. **Records of management decisions related to continual improvement**
- D. The budget assigned to operate the ISMS and its related allocations

**Answer: C**

Explanation:

Clause 7.5 (Documented Information) specifies that organizations must maintain documentation necessary for the effectiveness of the ISMS. Additionally, Clause 9.3 (Management Review) requires "records of decisions related to continual improvement opportunities" as an output of management review. This is a core requirement and forms part of the documented information that must be retained and controlled. Third- party materials (B), budgets (C), and cross-reference statements to other ISO standards (D) are not required by ISO/IEC 27001. Only documents that directly demonstrate compliance, decision-making, and continual improvement are mandated. Therefore, the verified minimum required documentation includes records of management review decisions related to continual improvement, confirming answer: A.

#### NEW QUESTION # 11

Which item is required to be defined when planning the organization's risk assessment process?

- A. **The criteria for acceptable levels of risk**
- B. The parts of the ISMS scope which are excluded from the risk assessment
- C. There are NO specific information requirements
- D. How the effectiveness of the method will be measured

**Answer: A**

Explanation:

Clause 6.1.2 (Information security risk assessment) requires organizations to "define and apply an information security risk assessment process that... establishes and maintains information security risk criteria, including criteria for accepting risk." This means that acceptable levels of risk (risk acceptance criteria) must be explicitly defined. These criteria ensure consistent decision-making when evaluating whether identified risks need further treatment or can be tolerated.

Option A is incorrect because exclusions relate to the ISMS scope (Clause 4.3), not risk assessment planning.

Option B is not a requirement; effectiveness of risk assessment methods is not required to be measured, though methods must be applied consistently. Option D is false—the standard clearly specifies required elements for risk assessment.

Thus, the correct answer is C: The criteria for acceptable levels of risk.

## NEW QUESTION # 12

Which statement describes the Classification of information control in Annex A of ISO/IEC 27001?

- A. Ensures the rules to control physical and logical access apply to assets
- B. Ensures that security perimeters are used to protect assets
- **C. Ensures that information is classified based on confidentiality, integrity and availability**
- D. Ensures that all information assets are labelled with their classification

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.12 (Classification of information) states:

"Information should be classified according to the information security needs of the organization based on confidentiality, integrity and availability." This aligns directly with option B. Option A (labelling) is a separate control (Annex A.5.13). Option C (security perimeters) is under physical controls (Annex A.7.1). Option D (access control rules) relates to Annex A.5.15 and A.8.2. Thus, the verified correct statement for the Classification of information control is B.

## NEW QUESTION # 13

Which information is required to be included in the Statement of Applicability?

- A. The criteria against which risk will be evaluated
- B. The risk assessment approach of the organization
- **C. The justification for including each information security control**
- D. The scope and boundaries of the ISMS

**Answer: C**

Explanation:

Clause 6.1.3 (d) requires that the organization "produce a Statement of Applicability that contains the necessary controls (see Annex A), and justification for inclusions, whether they are implemented or not, and the justification for exclusions." This is the defining requirement of the SoA: it documents which Annex A controls are relevant, which are implemented, and the justification for inclusion/exclusion. While the ISMS scope (A) is documented in Clause 4.3, and risk evaluation criteria (C) are defined in Clause 6.1.2, these do not belong in the SoA. The SoA does not describe the full risk assessment approach (B); that is part of the risk assessment methodology.

Therefore, the mandatory requirement for the SoA is justification for including (or excluding) each information security control.

## NEW QUESTION # 14

Which action is an organization required to take to ensure that personnel are competent to perform their assigned tasks within the ISMS?

- **A. Hold up-to-date records on training, skills, experience and qualifications**
- B. Ensure that the controls for compliance with legal and contractual requirements are implemented
- C. Ensure all personnel are trained to ISO/IEC 27001 Foundation level
- D. Identify products which could be used in the organization to improve ISMS performance and effectiveness

**Answer: A**

Explanation:

Clause 7.2 (Competence) requires the organization to:

\* "determine the necessary competence of person(s) doing work under its control that affects its information security performance;"  
\* "ensure that these persons are competent on the basis of appropriate education, training, or experience;"  
\* "retain appropriate documented information as evidence of competence." This makes holding up-to-date records on training, skills, experience, and qualifications (D) the correct answer. Option A is irrelevant to competence. Option B is incorrect since ISO does not require Foundation- level training - competence is context-based. Option C is related to compliance but does not ensure individual competence.

Thus, the verified correct answer is D.

## NEW QUESTION # 15

With the rapid development of the world economy and frequent contacts between different countries, the talent competition is increasing day by day, and the employment pressure is also increasing day by day. If you want to get a better job and relieve your employment pressure, it is essential for you to get the ISO-IEC-27001-Foundation Certification. However, due to the severe employment situation, more and more people have been crazy for passing the ISO-IEC-27001-Foundation exam by taking examinations, the exam has also been more and more difficult to pass.
