P.S. Free & New 2V0-13.25 dumps are available on Google Drive shared by iPassleader: <https://drive.google.com/open?id=1f2e-FH6JRy7HE-jSXmQkiup4SUKIAkYn>

It is convenient for the user to read. The 2V0-13.25 test materials have a biggest advantage that is different from some online learning platform which has using terminal number limitation, the 2V0-13.25 quiz torrent can meet the client to log in to learn more, at the same time, the user can be conducted on multiple computers online learning, greatly reducing the time, and people can use the machine online of 2V0-13.25 Test Prep more conveniently at the same time. As far as concerned, the online mode for mobile phone clients has the same function.

## VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.</li> </ul>

## VMware 2V0-13.25 Questions For Guaranteed Success [2026]

If you want to ace the VMware Cloud Foundation 9.0 Architect (2V0-13.25) test, the main problem you may face is not finding updated 2V0-13.25 practice questions to crack this test quickly. After examining the situation, the iPassleader has come with the idea to provide you with updated and actual VMware 2V0-13.25 Exam Dumps so you can pass VMware Cloud Foundation 9.0 Architect (2V0-13.25) test on the first attempt. The product of iPassleader has many different premium features that help you use this product with ease. The study material has been made and updated after consulting with a lot of professionals and getting customers' reviews.

### VMware Cloud Foundation 9.0 Architect Sample Questions (Q92-Q97):

#### NEW QUESTION # 92

How can Broadcom storage solutions improve VMware vSAN performance?

- A. Seamless integration
- B. Data redundancy
- C. High IOPS
- D. Low latency

**Answer: A,B,C,D**

Explanation:

High IOPS, low latency, data redundancy, and seamless integration improve vSAN performance with Broadcom storage solutions.

#### NEW QUESTION # 93

Which Broadcom solutions are required to support VMware's disaster recovery strategy?

- A. Broadcom RAID Controller
- B. Broadcom 25GbE Ethernet Adapter
- C. vSphere HA
- D. vSAN

**Answer: A,C,D**

Explanation:

vSphere HA, Broadcom RAID Controllers, and vSAN are essential for supporting VMware's disaster recovery strategy.

## NEW QUESTION # 94

What are the best practices for troubleshooting VMware storage issues with Broadcom hardware?

- A. Verify disk health status
- B. Reset storage array configuration
- C. Check RAID controller logs
- D. Monitor latency and IOPS

**Answer: A,C,D**

Explanation:

Disk health, RAID logs, and latency monitoring are essential to resolve storage problems in VMware.

## NEW QUESTION # 95

An architect is working on a design for a new VMware Cloud Foundation (VCF) solution for a retail organization. The organization wants to initially deploy the solution into their headquarters and a number of larger stores. They also plan to pilot the expansion of the deployment into some of their smaller stores.

The locations have the following characteristics:

Headquarters has a brand-new datacenter and 40Gb network infrastructure.

Larger stores have secure machine rooms and 10Gb network infrastructure.

Smaller stores have small secure racks and 100Mb network infrastructure.

The organization's cloud administration team have stated a requirement that the design should minimize the number of instances of management tools they need to support without impacting the performance of the workloads consumed by the end users.

What three design decisions about the VCF deployment architecture could the architect include in the logical design? (Choose three.)

- A. Smaller stores will have remote clusters deployed from the geographically closest Larger store VCF instance.
- B. Larger stores will have a private cloud based on the VCF Consolidated Architecture.
- C. Headquarters will have a private cloud based on the VCF Standard Architecture.
- D. Larger stores will have workload domains deployed from the HQ VCF instance.
- E. Smaller stores will have remote clusters deployed from the HQ VCF instance.
- F. Headquarters will have a private cloud based on the VCF Consolidated Architecture.

**Answer: C,D,E**

Explanation:

VMware Cloud Foundation (VCF) offers two primary architectural models: Standard Architecture (separate Management and Workload Domains) and Consolidated Architecture (combined management and workloads in a single domain). The requirement to minimize management tool instances suggests centralizing management where possible, while the diverse network infrastructure (40Gb, 10Gb, 100Mb) and workload performance needs influence the design.

Let's evaluate each option:

Option A: Headquarters will have a private cloud based on the VCF Consolidated Architecture The Consolidated Architecture combines management and workload components in one domain, suitable for smaller deployments with limited resources. However, headquarters has a brand-new datacenter with 40Gb networking, indicating a high-capacity environment likely intended as the central hub. The VCF 5.2 Architectural Guide recommends the Standard Architecture for larger, scalable deployments with robust infrastructure, as it separates management for better isolation and scalability, conflicting with Consolidated Architecture here.

Option B: Larger stores will have a private cloud based on the VCF Consolidated Architecture Larger stores have 10Gb infrastructure and secure machine rooms, suggesting moderate capacity. While Consolidated Architecture could work, it requires a full VCF stack (SDDC Manager, vCenter, NSX) per site, increasing management instances. This contradicts the requirement to minimize management tools, as each store would need its own management stack.

Option C: Smaller stores will have remote clusters deployed from the HQ VCF instance Smaller stores with 100Mb infrastructure are resource-constrained. Deploying remote clusters (e.g., stretched or additional clusters) managed by the HQ VCF instance leverages centralized SDDC Manager and vCenter, minimizing management tools. The VCF 5.2 Administration Guide supports remote cluster deployment from a central VCF instance, ensuring performance via local workload placement while reducing administrative overhead-ideal for the pilot phase.

Option D: Smaller stores will have remote clusters deployed from the geographically closest Larger store VCF instance This assumes larger stores host their own VCF instances, which increases management complexity (multiple SDDC Managers). The requirement to minimize management tools favors a single HQ-managed instance over distributed management from larger stores, making this less optimal.

Option E: Headquarters will have a private cloud based on the VCF Standard Architecture. The Standard Architecture deploys a dedicated Management Domain at HQ (with 40Gb infrastructure) and allows workload domains or remote clusters to be managed centrally. This aligns with minimizing management instances (one SDDC Manager, one vCenter) while supporting high-performance workloads across all locations, per the VCF 5.2 Architectural Guide. It's the best fit for HQ's role as the central hub.

Option F: Larger stores will have workload domains deployed from the HQ VCF instance. Deploying workload domains for larger stores from HQ's VCF instance uses the Standard Architecture's flexibility to manage multiple domains centrally. With 10Gb infrastructure, larger stores can host workloads efficiently under HQ's SDDC Manager, avoiding separate VCF instances and meeting the management minimization requirement without compromising performance.

Conclusion:

E: Standard Architecture at HQ provides a scalable, centralized management foundation.

F: Workload domains for larger stores from HQ reduce management overhead.

C: Remote clusters for smaller stores from HQ support the pilot with minimal tools.

This trio balances centralized management with performance across varied infrastructure.

Reference: VMware Cloud Foundation 5.2 Architectural Guide ([docs.vmware.com](https://docs.vmware.com)): Section on Standard vs. Consolidated Architecture.

## NEW QUESTION # 96

Which of the following are key capabilities of VMware NSX in VMware Cloud Foundation?

- A. Network virtualization
- B. Backup and disaster recovery
- C. Storage management
- D. Security and micro-segmentation

**Answer: A,D**

Explanation:

VMware NSX provides network virtualization and security, crucial for managing the network in VMware Cloud Foundation.

## NEW QUESTION # 97

.....

Experts at iPassleader strive to provide applicants with valid and updated VMware Cloud Foundation 9.0 Architect 2V0-13.25 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the VMware 2V0-13.25 preparational material we provide and back it up with a money-back guarantee. iPassleader provides VMware 2V0-13.25 Exam Questions in multiple formats to make preparation easy and you can prepare yourself according to your convenience way.
