Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q55-Q60):

NEW QUESTION # 55
Refer to the exhibit.
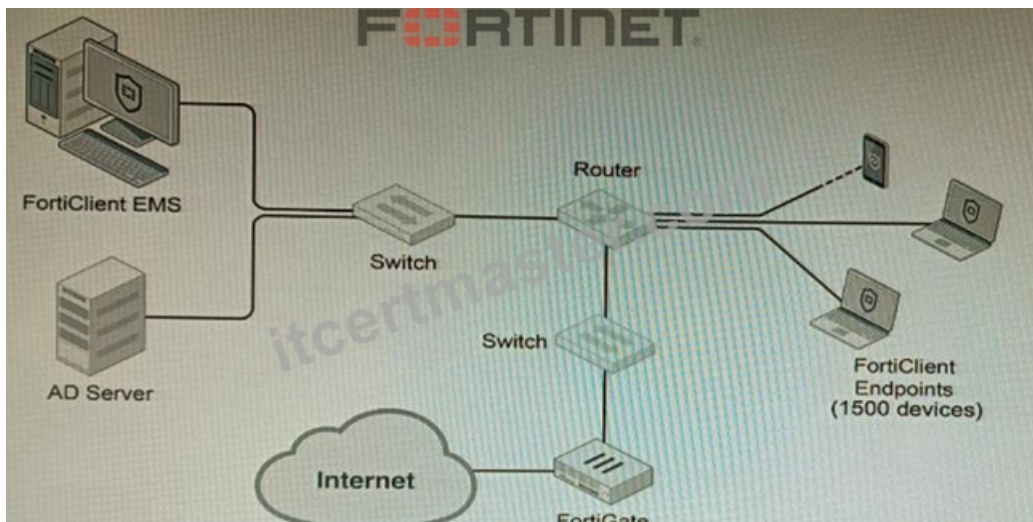

A customer wants FortiClient EMS configured to deploy to 1500 endpoints. The deployment will be integrated with FortiOS and there is an Active Directory server.

Given the configuration shown in the exhibit, which two statements about the installation are correct? (Choose two.)

- A. A client can be eligible for multiple enabled configurations on the EMS server, and one will be chosen based on first priority
- B. If no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay.
- C. The Windows clients only require "File and Printer Sharing0 allowed and the rest is handled by Active Directory group policy
- D. You can only deploy initial installations to Windows clients.
- E. You must use Standard or Enterprise SQL Server rather than the included SQL Server Express

Answer: B,C

Explanation:
A is correct because if no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay. This is because the FortiClient EMS server will not force the installation on the client.
E is correct because the Windows clients only require "File and Printer Sharing" allowed and the rest is handled by Active Directory group policy. This is because the Active Directory group policy will configure the Windows clients to automatically install FortiClient and the FortiClient EMS server will only need to push the initial configuration to the clients.
The other options are incorrect. Option B is incorrect because a client can only be eligible for one enabled configuration on the EMS server. Option C is incorrect because you can deploy initial installations to both Windows and macOS clients. Option D is incorrect because you can use the included SQL Server Express to deploy FortiClient EMS.

NEW QUESTION # 56
Refer to the exhibit.
You are deploying a FortiGate 6000F. The device should be directly connected to a switch. In the future, a new hardware module providing higher speed will be installed in the switch, and the connection to the FortiGate must be moved to this higher-speed port. You must ensure that the initial FortiGate interface connected to the switch does not affect any other port when the new module is installed and the new port speed is defined.
How should the initial connection be made?

- A. Connect the switch on any interface between ports 21 to 24
- B. Connect the switch on any interface between ports 1 to 4
- C. Connect the switch on any interface between ports 25 to 28
- D. Connect the switch on any interface between ports 5 to 8.

Answer: C

NEW QUESTION # 57
