NewPassLeader announces another remarkable feature to its users by giving them the Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) dumps updates until 1 year after purchasing the Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) certification exam pdf questions.

Salesforce Certified Data Cloud Consultant Sample Questions (Q25-Q30):

NEW QUESTION # 25

Cumulus Financial wants its service agents to view a display of all cases associated with a Unified Individual on a contact record. Which two features should a consultant consider for this use case?

Choose 2 answers

- A. Data Action
- B. **Profile API**
- C. Query APL
- D. **Lightning Web Components**

Answer: B,D

Explanation:

A Unified Individual is a profile that combines data from multiple sources using identity resolution rules in Data Cloud. A Unified Individual can have multiple contact points, such as email, phone, or address, that link to different systems and records. A consultant can use the following features to display all cases associated with a Unified Individual on a contact record:

* **Profile API:** This is a REST API that allows you to retrieve and update Unified Individual profiles and

* related attributes in Data Cloud. You can use the Profile API to query the cases that are related to a Unified Individual by using the contact point ID or the unified ID as a filter. You can also use the Profile API to update the Unified Individual profile with new or modified case information from other systems.

* **Lightning Web Components:** These are custom HTML elements that you can use to create reusable UI components for your Salesforce apps. You can use Lightning Web Components to create a custom component that displays the cases related to a Unified Individual on a contact record. You can use the Profile API to fetch the data from Data Cloud and display it in a table, list, or chart format. You can also use Lightning Web Components to enable actions, such as creating, editing, or deleting cases, from the contact record.

The other two options are not relevant for this use case. A Data Action is a type of action that executes a flow, a data action target, or a data action script when an insight is triggered. A Data Action is used for activation and personalization, not for displaying data on a contact record. A Query APL is a query language that allows you to access and manipulate data in Data Cloud. A Query APL is used for data exploration and analysis, not for displaying data on a contact record. NEW QUESTION # 26

A customer has a requirement to receive a notification whenever an activation fails for a particular segment.

Which feature should the consultant use to solution for this use case?

- A. Dashboard
- B. **Activation alert**
- C. Report
- D. Flow

Answer: B

Explanation:

Explanation

The feature that the consultant should use to solution for this use case is C. Activation alert. Activation alerts are notifications that are

sent to users when an activation fails or succeeds for a segment. Activation alerts can be configured in the Activation Settings page, where the consultant can specify the recipients, the frequency, and the conditions for sending the alerts. Activation alerts can help the customer to monitor the status of their activations and troubleshoot any issues that may arise. References: Salesforce Data Cloud Consultant Exam Guide, Activation Alerts

NEW QUESTION # 27

A client wants to bring in loyalty data from a custom object in Salesforce CRM that contains a point balance for accrued hotel points and airline points within the same record. The client wants to split these point systems into two separate records for better tracking and processing.

What should a consultant recommend in this scenario?

- A. Create a junction object in Salesforce CRM and modify the ingestion strategy.
- B. Create a data kit from the data lake object and deploy it to the same Data Cloud org.
- **C. Use batch transforms to create a second data lake object.**
- D. Clone the data source object.

Answer: C

Explanation:

Explanation

Batch transforms are a feature that allows creating new data lake objects based on existing data lake objects and applying transformations on them. This can be useful for splitting, merging, or reshaping data to fit the data model or business requirements. In this case, the consultant can use batch transforms to create a second data lake object that contains only the airline points from the original loyalty data object. The original object can be modified to contain only the hotel points. This way, the client can have two separate records for each point system and track and process them accordingly. References: Batch Transforms, Create a Batch Transform

NEW QUESTION # 28

A user is not seeing suggested values from newly-modeled data when building a segment.

What is causing this issue?

- **A. Value suggestion is still processing and takes up to 24 hours to be available.**
- B. Value suggestion can only work on direct attributes and not related attributes.
- C. Value suggestion will only return results for the first 50 values of a specific attribute.
- D. Value suggestion requires Data Aware Specialist permissions at a minimum.

Answer: A

Explanation:

Explanation

The most likely cause of this issue is that value suggestion is still processing and takes up to 24 hours to be available. Value suggestion is a feature that enables you to see suggested values for data model object (DMO) fields when creating segment filters. However, this feature needs to be enabled for each DMO field, and it can take up to 24 hours for the suggested values to appear after enabling the feature. Therefore, if a user is not seeing suggested values from newly-modeled data, it could be that the data has not been processed yet by the value suggestion feature. References:

* Use Value Suggestions in Segmentation

NEW QUESTION # 29

A user needs permissions to access Data Cloud to create, manage, and activate segments. However, the user should not be allowed to create reports or manage data sources.

Which permission set should the consultant assign?

- A. Data Cloud Marketing Manager
- B. Data Cloud user
- **C. Data Cloud Marketing Specialist**
- D. Data Cloud Data Aware Specialist

Answer: C

Explanation:

To grant a user permissions to create, manage, and activate segments without allowing them to create reports or manage data sources, the consultant should assign the Data Cloud Marketing Specialist permission set. Here's why:

Understanding the Role Requirements :

The user needs access to segment creation, management, and activation.

The user should not have permissions to create reports or manage data sources, which are higher-level administrative tasks.

Why Data Cloud Marketing Specialist?

The Data Cloud Marketing Specialist permission set provides access to segment-related functionalities, including creating, managing, and activating segments.

It excludes permissions for creating reports or managing data sources, aligning perfectly with the stated requirements.

Steps to Assign the Permission Set :

Step 1: Navigate to Setup > Users > Permission Sets in Salesforce.

Step 2: Locate and assign the Data Cloud Marketing Specialist permission set to the user.

Step 3: Verify that the user has the required permissions by testing their access in Data Cloud.

Why Not Other Options?

B . Data Cloud Marketing Manager: This permission set includes broader permissions, such as managing campaigns and audiences, which are not required for this role.

C . Data Cloud Data Aware Specialist: This role focuses on data ingestion and transformation, not segment management.

D . Data Cloud User: This is a basic permission set that provides limited access and does not include segment management capabilities.

By assigning the Data Cloud Marketing Specialist permission set, the consultant ensures that the user has the necessary permissions without overextending their access.

NEW QUESTION # 30

.....

Persistence and proficiency made our experts dedicated in this line over so many years on the Data-Cloud-Consultant study guide. Their passing rates of our Data-Cloud-Consultant exam materials are over 98 and more, which is quite riveting outcomes. After using our Data-Cloud-Consultant practice engine, you will have instinctive intuition to conquer all problems and difficulties in your review. And with the simplified the content, you will find it is easy and interesting to study with our Data-Cloud-Consultant learning questions.
