We promise, when you buy the SY0-701 Exam Certification training materials, if there are any quality problems or you fail SY0-701 certification exam, we will give a full refund immediately.

CompTIA Security+ Certification Exam Sample Questions (Q453-Q458):

NEW QUESTION # 453

A visitor plugs a laptop into a network jack in the lobby and is able to connect to the company's network. Which of the following should be configured on the existing network infrastructure to best prevent this activity?

- A. Web application firewall
- B. Port security
- C. Transport layer security
- D. Virtual private network

Answer: B

NEW QUESTION # 454

During a recent log review, an analyst discovers evidence of successful injection attacks. Which of the following will best address this issue?

- A. Input validation
- B. Static code analysis
- C. Authentication
- D. Secure cookies

Answer: A

Explanation:

Input validation is the most effective way to prevent injection attacks, such as SQL injection, XSS, etc. It ensures that only correctly formatted and expected inputs are processed by the application.

NEW QUESTION # 455

A help desk employee receives a call from someone impersonating the Chief Executive Officer. The caller asks for assistance with resetting a password. Which of the following best describes this event?

- A. Hactivism
- B. Misinformation
- C. Blackmail
- D. Vishing

Answer: D

NEW QUESTION # 456

Select the appropriate attack and remediation from each drop-down list to label the corresponding attack with its remediation.

INSTRUCTIONS

Not all attacks and remediation actions will be used.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Answer:

Explanation:

Explanation:

Web server Botnet Enable DDoS protection User RAT Implement a host-based IPS Database server Worm Change the default application password Executive Keylogger Disable vulnerable services Application Backdoor Implement 2FA using push notification A screenshot of a computer program Description automatically generated with low confidence

NEW QUESTION # 457

A company is expanding its threat surface program and allowing individuals to security test the company's internet-facing application. The company will compensate researchers based on the vulnerabilities discovered. Which of the following best describes the program the company is setting up?

- A. Bug bounty
- B. Penetration testing
- C. Open-source intelligence
- D. Red team

Answer: A

Explanation:

A bug bounty is a program that rewards security researchers for finding and reporting vulnerabilities in an application or system. Bug bounties are often used by companies to improve their security posture and incentivize ethical hacking. A bug bounty program typically defines the scope, rules, and compensation for the researchers.
