Trustworthy NSK300 Exam Content - NSK300 Reliable Torrent

Exam   :   **NSK300**

Title   :   Netskope Certified Cloud
              Security Architect Exam

https://www.passcert.com/NSK300.html

P.S. Free & New NSK300 dumps are available on Google Drive shared by DumpsKing: https://drive.google.com/open?id=1ZTGP9fIh86SfvYv4SBWgtXagspiMBXbs

In order to cater to different needs for customers, three versions for NSK300 training materials are available, and you can choose the most suitable one according to your own needs. NSK300 PDF version is printable, and if you prefer to practice on paper, you can choose this version and print it into hard one. NSK300 Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, you can choose this version. Besides, NSK300 Soft test engine has two modes for practice, and it supports MS operating system. NSK300 Online test engine is convenient and easy to learn, and it has testing history and performance review, if you like this mode, you can choose this version.

You only need 20-30 hours to learn our NSK300 test braindumps and then you can attend the exam and you have a very high possibility to pass the NSK300 exam. For many people whether they are the in-service staff or the students they are busy in their job, family lives and other things. But you buy our NSK300 prep torrent you can mainly spend your time energy and time on your job, the learning or family lives and spare little time every day to learn our Netskope Certified Cloud Security Architect exam torrent. And you will pass the NSK300 exam as it is a piece of cake to you with our NSK300 exam questions.

NSK300 Reliable Torrent & NSK300 Test Voucher

Our key priority is to provide such authentic Netskope NSK300 Exam Material which helps the candidate qualify for Netskope Certified Cloud Security Architect NSK300 exam on the very first attempt. This means that you can download the product right after purchasing and start your journey toward your big career.

Netskope Certified Cloud Security Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59
You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs.
How would you accomplish this task?

- A. Use IPsec tunnels from the AWS Virtual Private Gateway.
- B. Use IPsec tunnels from the AWS Transit Gateway.
- C. Use GRE tunnels from the AWS Transit Gateway.
- D. Use GRE tunnels from the AWS Virtual Private Gateway

Answer: B

Explanation:
The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required12. The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP1.

NEW QUESTION # 60
You are architecting a Netskope steering configuration for devices that are not owned by the organization The users could be either on-premises or off-premises and the architecture requires that traffic destined to the company's instance of Microsoft 365 be steered to Netskope for inspection.
How would you achieve this scenario from a steering perspective?

- A. Use DPoP and Secure Forwarder
- B. Use IPsec and GRE tunnels.
- C. Use reverse proxy.
- D. Use explicit proxy and the Netskope Client

Answer: D

Explanation:
For devices not owned by the organization, using an explicit proxy along with the Netskope Client is the best approach to steer traffic for inspection. This method allows for granular control over the traffic, ensuring that only the traffic destined for the company's instance of Microsoft 365 is inspected by Netskope. The explicit proxy configuration can be applied regardless of whether the users are on-premises or off-premises, providing a consistent steering mechanism for all users.

NEW QUESTION # 61
You successfully configured Advanced Analytics to identify policy violation trends Upon further investigation, you notice that the activity is NULL. Why is this happening in this scenario?

- A. The REST API v1 token has expired.
- B. A user accessed a static Web page.
- C. The SSPM policy was not configured during setup.
- D. A policy violation was identified using API Protection.

Answer: B

Explanation:
The reason for the activity being NULL in this scenario is likely because a user accessed a static Web page. In Netskope's Advanced Analytics, when the activity is reported as NULL, it often indicates that there was no dynamic interaction or transaction to record,

which is typical when a static web page is accessed1. Static web pages do not generate the kind of events or activities that are tracked by policies, hence they appear as NULL in the activity field.

This explanation is supported by the Netskope Knowledge Portal, which mentions that applications fields with null values indicate incidents generated from web traffic, such as accessing static web pages2.Further information on interpreting NULL values in Advanced Analytics reports can be found in the Netskope documentation1.

NEW QUESTION # 62

Your customer is currently using Directory Importer with Active Directory (AD) to provision users to Nelskope. They have recently acquired three new companies (A. B. and C) and want to onboard users from the companies onto the NetsKope platform. Information about the companies is shown below.
- Company A uses Active Directory.
-- Company B uses Azure AD.
-- Company C uses Okta Universal Directory.
Which statement is correct in this scenario?

- A. Users from Company B and Company C cannot be provisioned because the customer is already using AD Importer.
- B. Either Company B or Company C users cannot be provisioned because integration with only one SCIM solution is allowed.
- C. Company A users cannot be provisioned to Netskope because the customer is already using AD Importer to import users from another Active Directory environment.
- D. Users from Companies A. B, and C can be provisioned to Netskope by deploying additional AD Importers and integrating more than one SCIM solution.

Answer: D

Explanation:
Users from Companies A, B, and C can indeed be provisioned to Netskope. Company A, which uses Active Directory, can continue to use the existing AD Importer. For Company B that uses Azure AD and Company C that uses Okta Universal Directory, integration with SCIM (System for Cross-domain Identity Management) solutions is possible. Netskope supports provisioning users from multiple directories, including Active Directory and cloud-based identity providers like Azure AD and Okta, by using additional AD Importers and integrating more than one SCIM solution12.

The correct approach for provisioning users from different companies that use various directory services is supported by Netskope's capabilities to integrate with multiple identity providers and directory services, as outlined in their documentation and community resources12.

Netskope supports multiple identity sources at the same time.In this scenario:

Company A (Active Directory):You can deploy additional Directory Importer (DI) instances to connect to separate AD forests or domains. Netskope supports multiple DI connectors.

Company B (Azure AD):Azure AD provisioning uses SCIM, which is fully supported alongside DI.

Company C (Okta Universal Directory):Okta also uses SCIM, and Netskope allows more than one SCIM integration simultaneously.

Therefore, the customer can onboard all three companies without conflict.

Why the other options are incorrect

A). Users from Company B and C cannot be provisioned because customer is already using AD Importer.# Incorrect - SCIM integrations can coexist with Directory Importer.

B). Either Company B or C cannot be provisioned because only one SCIM solution is allowed.# Incorrect
- Netskope supports multiple SCIM connectors.

D). Company A users cannot be provisioned because the customer is already using AD Importer with another AD environment.# Incorrect - Multiple DI instances can be deployed for multiple AD environments.

NEW QUESTION # 63

Review the exhibit.

You installed Directory Importer and configured it to import specific groups ot users into your Netskope tenant as shown in the exhibit. One hour after a new user has been added to the domain, the user still has not been provisioned to Netskope. What are three potential reasons for this failure? (Choose three.)

- A. The user is not a member of the group specified as a filter
- B. Active Directory integration is not enabled on your tenant.
- C. Directory Importer does not support ongoing user syncs; you must manually provision the user.

- D. The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpomt.
- E. The default collection interval is 180 minutes, therefore a sync may not have run yet.

Answer: A,D,E

Explanation:

The three potential reasons for the failure of a new user not being provisioned to Netskope an hour after being added to the domain could be:

* B. The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpoint:
If the server cannot connect to Netskope's endpoint, it cannot sync the user data. This could be due to network issues, incorrect configuration, or firewall restrictions1.

* C. The user is not a member of the group specified as a filter: The Directory Importer may be configured to import users from specific groups only. If the new user is not a member of these groups, they will not be imported into Netskope1.

* E. The default collection interval is 180 minutes, therefore a sync may not have run yet: The Directory Importer may be scheduled to sync every 180 minutes. If only an hour has passed, the sync process might not have occurred yet, and the user would not be provisioned until the next sync interval1.

These potential reasons are based on the standard operation and configuration of the Netskope Directory Importer as described in the Netskope Knowledge Portal and documentation

NEW QUESTION # 64

......

Preparation of professional Netskope Certified Cloud Security Architect (NSK300) exam is no more difficult because experts have introduced the preparatory products. With DumpsKing products, you can pass the Netskope Certified Cloud Security Architect (NSK300) exam on the first attempt. If you want a promotion or leave your current job, you should consider achieving a professional certification like Netskope Certified Cloud Security Architect (NSK300) exam. You will need to pass the Netskope NSK300 exam to achieve the Netskope Certified Cloud Security Architect (NSK300) certification.
