Exam 156-315.81 Objectives Pdf | Exam 156-315.81 Experience

In order to cater to different needs of customers, three versions for 156-315.81 training materials are available, you can choose the most suitable one in accordance with your own needs. 156-315.81 PDF version is printable, and if you prefer a hard one, you can choose this version. 156-315.81 Soft test engine supports MS operating system, and it can install in more than 200 computers. 156-315.81 Online Test engine is convenient and easy to learn, you can have offline practice if you want. 156-315.81 Online soft test engine supports all web browsers and it has testing history and performance review, and you can have a general review of what you have learnt before next learning.

What is the cost of the CheckPoint 156-315.81 Exam

The price of the CheckPoint 156-315.81 Exam is USD 250.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q51-Q56):

NEW QUESTION # 51

Tom has been tasked to install Check Point R81 in a distributed deployment. Before Tom installs the systems this way, how many machines will he need if he does NOT include a SmartConsole machine in his calculations?

- A. Two machines
- B. Three machines
- C. One machine
- D. One machine, but it needs to be installed using SecurePlatform for compatibility purposes.

Answer: A

Explanation:
Explanation
Tom will need two machines to install Check Point R81 in a distributed deployment, if he does not include a SmartConsole machine in his calculations. A distributed deployment consists of a Security Management Server that manages one or more Security Gateways. Therefore, Tom will need one machine for the Security Management Server and another machine for the Security Gateway. The other options are either too few or too many machines for a distributed deployment. References: Check Point R81 Installation and Upgrade Guide

NEW QUESTION # 52

Which statements below are CORRECT regarding Threat Prevention profiles in SmartDashboard?

- A. You can assign only one profile per gateway and a profile can be assigned to one or more rules.
- B. You can assign multiple profiles per gateway and a profile can be assigned to one or more rules.
- C. You can assign multiple profiles per gateway and a profile can be assigned to one rule only.
- D. You can assign only one profile per gateway and a profile can be assigned to one rule Only.

Answer: B

NEW QUESTION # 53

Which VPN routing option uses VPN routing for every connection a satellite gateway handles?

- A. To center and to other satellites through center
- B. To center, or through the center to other satellites, to Internet and other VPN targets
- C. To satellites through center only
- D. To center only

Answer: B

Explanation:
Explanation
This VPN routing option uses VPN routing for every connection a satellite gateway handles, regardless of the destination. This means that all traffic from the satellite gateway will go through the VPN tunnel to the center gateway, and then be routed to the appropriate destination, whether it is another satellite, the Internet, or another VPN target. This option provides the highest level of security and control, but also consumes more bandwidth and processing power.

NEW QUESTION # 54

What state is the Management HA in when both members have different policies/databases?

- A. Synchronized
- B. Collision
- C. Never been synchronized
- D. Lagging

Answer: B

Explanation:
The state of the Management HA when both members have different policies/databases is Collision. This state indicates that there is

a conflict between the members and they need to be synchronized manually. The other states are not applicable in this scenario. The Synchronized state indicates that both members have identical policies/databases and are ready for failover. The Never been synchronized state indicates that the members have never been synchronized since they were configured as HA pair. The Lagging state indicates that one member has a newer policy/database than the other member and needs to be synchronized automatically.

NEW QUESTION # 55

In terms of Order Rule Enforcement, when a packet arrives at the gateway, the gateway checks it against the rules in the top Policy Layer, sequentially from top to bottom Which of the following statements is correct?

- A. If the rule does not match in the Network policy it will continue to other enabled polices
- B. If the Action of the matching rule is Drop the gateway stops matching against later rules in the Policy Rule Base and drops the packet
- C. If the Action of the matching rule is Drop, the gateway continues to check rules in the next Policy Layer down
- D. If the Action of the matching rule is Accept the gateway will drop the packet

Answer: B

Explanation:
If the action of the matching rule is Drop, the gateway stops matching against later rules in the Policy Rule Base and drops the packet. This is because the Drop action is a final action that terminates the rule matching process and discards the packet. The gateway does not continue to check rules in the next Policy Layer down or in other enabled policies. Reference: [Policy Layers and Sub-Policies]
