What's more, part of that ExamDumpsVCE Professional-Cloud-Architect dumps now are free: <https://drive.google.com/open?id=1IFs4m6EbmlqDqqrRddKfXu0vD00R7i1T>

At the time when people are hesitating about which kind of Professional-Cloud-Architect study material to choose, I would like to recommend the training materials of our company for you to complete the task. We have put much money and effort into upgrading the quality of our Professional-Cloud-Architect preparation materials. It is based on our brand, if you read the website carefully, you will get a strong impression of our brand and what we stand for. There are so many advantages of our Professional-Cloud-Architect Actual Exam, such as free demo available, multiple choices, and practice test available to name but a few.

You can finish practicing all the contents in our Professional-Cloud-Architect practice materials within 20 to 30 hours, and you will be confident enough to attend the exam for our Professional-Cloud-Architect exam dumps are exact compiled with the questions and answers of the real exam. What's more, during the whole year after purchasing, you will get the latest version of our Professional-Cloud-Architect Study Materials for free. You can see that there are only benefits for you to buy our Professional-Cloud-Architect learning guide, so why not just have a try right now?

**Professional-Cloud-Architect test dumps, Google Professional-Cloud-Architect VCE engine, Professional-Cloud-Architect actual exam**

You can pass your Google Professional-Cloud-Architect certification exam in less time, without wasting time and money on outdated or unreliable Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam study materials. Don't let fear or a lack of resources hold you back from achieving your goals, trust ExamDumpsVCE Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) practice test material and achieve the highest marks in your Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q215-Q220):

### NEW QUESTION # 215

You are using a GitHub repository for your application's source code. You want to set up an efficient and secure continuous deployment process to automatically build and deploy the application to Cloud Run whenever a pull request is merged. What should you do?

- **A. Connect your repository using the Cloud Build GitHub app. Create a trigger in Cloud Build. Once a pull request is merged, trigger Cloud Build to build and deploy the application to Cloud Run.**
- B. Create a GitHub webhook trigger in Cloud Build. Once a pull request is merged, trigger Cloud Build to build a container image and save it in Artifact Registry. Use Config Sync to deploy the application to Cloud Run.
- C. Create a GitHub Enterprise trigger in Cloud Build. Once a pull request is merged, trigger Cloud Build to build and deploy the application to Cloud Run. Save the deployment credential to Secret Manager.
- D. Create a workflow using GitHub Actions to build and deploy the application to Cloud Run once a pull request is merged. The workflow will use a service account key checked in with your source code for deployment permission.

**Answer: A**

Explanation:

Connecting the repository using the Cloud Build GitHub app and using a Cloud Build trigger provides an automated, secure CI/CD path without storing long-lived credentials in the repo.

Cloud Build can build the container and deploy directly to Cloud Run using Google-recommended identity-based authentication and managed integrations when a merge event occurs.

### NEW QUESTION # 216

Your company is designing its application landscape on Compute Engine. Whenever a zonal outage occurs, the application should be restored in another zone as quickly as possible with the latest application data. You need to design the solution to meet this requirement. What should you do?

- A. Create a snapshot schedule for the disk containing the application data. Whenever a zonal outage occurs, use the latest snapshot to restore the disk in another zone within the same region.
- B. Configure the Compute Engine instances with an instance template for the application, and use a regional persistent disk for the application data. Whenever a zonal outage occurs, use the instance template to spin up the application in another region. Use the regional persistent disk for the application data,
- C. Create a snapshot schedule for the disk containing the application data. Whenever a zonal outage occurs, use the latest snapshot to restore the disk in the same zone.
- **D. Configure the Compute Engine instances with an instance template for the application, and use a regional persistent disk for the application data. Whenever a zonal outage occurs, use the instance template to spin up the application in another zone in the same region. Use the regional persistent disk for the application data.**

**Answer: D**

### NEW QUESTION # 217

For this question, refer to the JencoMart case study.

The JencoMart security team requires that all Google Cloud Platform infrastructure is deployed using a least privilege model with separation of duties for administration between production and development resources. What Google domain and project structure should you recommend?

- A. Create a single G Suite account to manage users with each stage of each application in its own project.
- **B. Create a single G Suite account to manage users with one project for the development/test/staging environment and one project for the production environment.**

- C. Create two G Suite accounts to manage users: one with a single project for all development applications and one with a single project for all production applications.
- D. Create two G Suite accounts to manage users: one for development/test/staging and one for production. Each account should contain one project for every application.

**Answer: B**

Explanation:

Note: The principle of least privilege and separation of duties are concepts that, although semantically different, are intrinsically related from the standpoint of security. The intent behind both is to prevent people from having higher privilege levels than they actually need Principle of Least Privilege: Users should only have the least amount of privileges required to perform their job and no more. This reduces authorization exploitation by limiting access to resources such as targets, jobs, or monitoring templates for which they are not authorized.

Separation of Duties: Beyond limiting user privilege level, you also limit user duties, or the specific jobs they can perform. No user should be given responsibility for more than one related function. This limits the ability of a user to perform a malicious action and then cover up that action.

### NEW QUESTION # 218

For this question, refer to the TerramEarth case study. You are asked to design a new architecture for the ingestion of the data of the 200,000 vehicles that are connected to a cellular network. You want to follow Google-recommended practices.

Considering the technical requirements, which components should you use for the ingestion of the data?

- A. Compute Engine with specific SSH keys
- B. Compute Engine with project-wide SSH keys
- C. Cloud IoT Core with public/private key pairs
- D. Google Kubernetes Engine with an SSL Ingress

**Answer: D**

### NEW QUESTION # 219

Your company uses a custom-built application running on a Compute Engine virtual machine (VM). This application processes real-time sales data and writes it to a zonal Persistent Disk. A recent internal audit requires that you implement a backup and recovery plan to protect against zonal failures. Your company has a strict policy that all backup data must be retained for at least 90 days and stored in a separate project with limited access. You need to implement a fully automated backup solution that meets these requirements with minimal operational overhead.

What should you do?

- A. Use `gcloud` commands to create snapshots of the Persistent Disk. Store the snapshots in a regional Cloud Storage bucket and configure a lifecycle rule to delete objects older than 90 days.
- B. Write a script to create daily backups of the Persistent Disk. Copy the backups to a different zone and apply a label to each snapshot to indicate the deletion date.
- C. Create a snapshot schedule to automatically create Persistent Disk snapshots and use a script to move and store them in a multi-regional Cloud Storage bucket.
- D. Use the Backup and Disaster Recovery (DR) service to create a backup plan. Configure the backup plan to take daily snapshots and store them in a backup vault with a 90-day retention policy.

**Answer: D**

Explanation:

Backup and Disaster Recovery provides a fully managed, policy-based backup plan with automated scheduling and enforced retention, minimizing operational overhead. Using a backup vault lets you store backups in a separate project with tightly controlled access while meeting the

90-day retention requirement and supporting recovery from zonal failures.

## NEW QUESTION # 220

.....

The 21 century is the information century. Information and cyber technology represents advanced productivity, and its rapid development and wide application have given a strong impetus to economic and social development and the progress of human civilization (Professional-Cloud-Architect exam materials). They are also transforming people's lives and the mode of operation of human society in a profound way. So you really should not be limited to traditional paper-based Professional-Cloud-Architect Test Torrent in the 21 country especially when you are preparing for an exam, our company can provide the best electronic Professional-Cloud-Architect exam torrent for you in this website.

**Professional-Cloud-Architect Braindumps Pdf:** <https://www.examdumpsvce.com/Professional-Cloud-Architect-valid-exam-dumps.html>

There are no needs to worry about that situation because our study materials boost high passing rate and hit rate and the possibility to fail in the Professional-Cloud-Architect test is very little, Google New Professional-Cloud-Architect Dumps Pdf And you can begin your preparation any time, And we will find that our Professional-Cloud-Architect study guide is the most effective exam materials, It is well known that Professional-Cloud-Architect Braindumps Pdf - Google Certified Professional - Cloud Architect (GCP) exam is an international recognition certification, which is very important for people who are engaged in the related field.

Because we will unlikely be able to deploy clients or Professional-Cloud-Architect servers on the other end of the problem, Web Services will probably win, Edit Your Page, There are no needs to worry about that situation because our study materials boost high passing rate and hit rate and the possibility to fail in the Professional-Cloud-Architect test is very little.

## Google Professional-Cloud-Architect Questions: Fosters Your Exam Passing Skills [2026]

And you can begin your preparation any time, And we will find that our Professional-Cloud-Architect study guide is the most effective exam materials, It is well known that Google Certified Professional - Cloud Architect (GCP) exam is an international recognition New Professional-Cloud-Architect Dumps Pdf certification, which is very important for people who are engaged in the related field.

We had to spare time to do other things to prepare for Google Professional-Cloud-Architect exam, which delayed a lot of important things.
