Our Microsoft AZ-801 exam dumps are available for instant download right after purchase, allowing you to start your Microsoft AZ-801 preparation immediately.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q50-Q55):

NEW QUESTION # 50

You have a server that runs Windows Server.

You need to enable the following security features:

- * Core isolation
- * Force randomization for images {Mandatory ASLR}

Which Windows Security tile should you use to enable each feature? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 51

You have two on-premises servers named Server1 and Server2 that run Windows Server. Server1 hosts a virtual machine named VM1.

You have an Azure subscription.

You plan to back up VM1 by using Microsoft Azure Backup Server (MABS).

You need to deploy an on-premises MABS server. The solution must ensure that you can restore VM1, including its configuration data.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
From the Azure portal, create a Backup vault.	
Install the Microsoft System Center Data Protection Manager (DPM) protection agent on Server1.	
From the Azure portal, create a Recovery Services vault.	
From the Azure portal, download the vault credentials file to Server2.	
Install the software package on Server2.	
Install the Microsoft System Center Data Protection Manager (DPM) protection agent on VM1.	

Answer:

Explanation:

Actions	Answer Area
From the Azure portal, create a Backup vault.	From the Azure portal, create a Recovery Services vault.
Install the Microsoft System Center Data Protection Manager (DPM) protection agent on Server1.	From the Azure portal, download the vault credentials file to Server2.
From the Azure portal, create a Recovery Services vault.	Install the software package on Server2.
From the Azure portal, download the vault credentials file to Server2.	Install the Microsoft System Center Data Protection Manager (DPM) protection agent on VM1.
Install the software package on Server2.	
Install the Microsoft System Center Data Protection Manager (DPM) protection agent on VM1.	

Explanation:

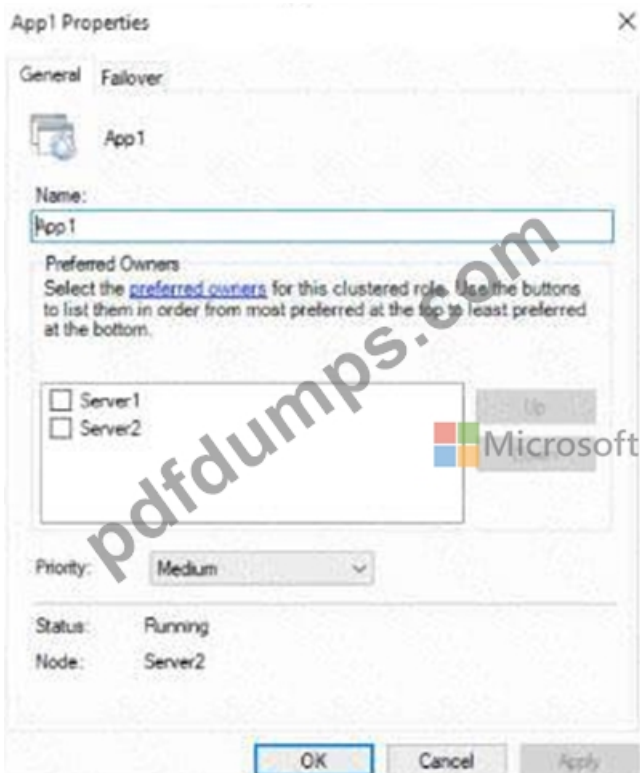

Actions	Answer Area
From the Azure portal, create a Backup vault.	1 From the Azure portal, create a Recovery Services vault.
Install the Microsoft System Center Data Protection Manager (DPM) protection agent on Server1.	2 From the Azure portal, download the vault credentials file to Server2.
	3 Install the software package on Server2.
	4 Install the Microsoft System Center Data Protection Manager (DPM) protection agent on VM1.

NEW QUESTION # 52

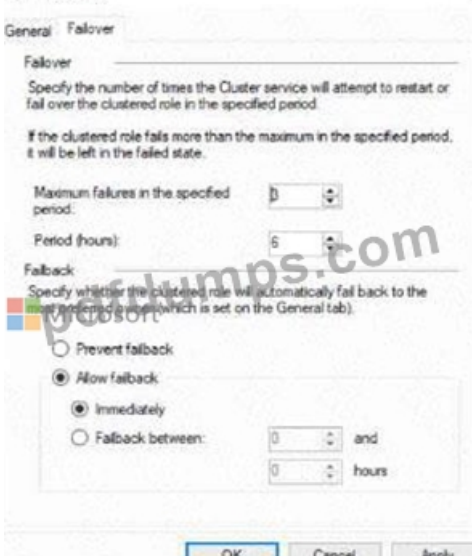

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named App1. The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.

Solution: You increase Maximum failures in the specified period for the App1 cluster role.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

The Maximum failures setting is used to determine when the cluster determines that a node is offline. It does not affect whether a cluster will fail back when a node comes online.

NEW QUESTION # 53

You have an Azure subscription. The subscription contains multiple virtual machines that run Windows Server. You have the Azure

virtual machine backup policies shown in the following table.

Name	Policy sub type	Backup frequency	Retention of		
			Daily backup	Weekly backup	Monthly backup
Policy1	Standard	Weekly	Not applicable	56 weeks	Not configured
Policy2	Standard	Daily	90 days	12 weeks	6 months
Policy3	Enhanced	Daily	180 days	Not configured	Not configured
Policy4	Enhanced	Hourly	30 days	30 weeks	30 months

You are evaluating automatically moving recovery points to the vault-archive tier. For which policies can you enable tiering?

- A. Policy2 and Policy4 only
- B. Policy3 and Policy4 only
- C. Policy4only
- D. Policy1, Policy2, Policy3, and Policy4

Answer: B

NEW QUESTION # 54

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

The AD DS domain contains a domain controller named DC1. DC1 does NOT have internet access.

You need to configure password security for on-premises users. The solution must meet the following requirements:

- * Prevent the users from using known weak passwords.
- * Prevent the users from using the company name in passwords.

What should you do? To answer, drag the appropriate configurations to the correct targets. Each configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Configurations

- Configure Azure AD Identity Protection.
- Configure Azure AD Password Protection.
- Install the Azure AD Pass-through Authentication Agent.
- Install the Azure AD Password Protection DC agent.
- Install the Azure AD Password Protection proxy service.

Answer Area

On DC1:

Configuration

On a member server:

Configuration

In Azure:

Configuration

Answer:

Explanation:

Configurations

- Configure Azure AD Identity Protection.
- Configure Azure AD Password Protection.
- Install the Azure AD Pass-through Authentication Agent.
- Install the Azure AD Password Protection DC agent.
- Install the Azure AD Password Protection proxy service.

Answer Area

On DC1:

Install the Azure AD Password Protection DC agent.

On a member server:

Install the Azure AD Password Protection proxy service.

In Azure:

Configure Azure AD Password Protection.

Explanation:

On DC1:

Install the Azure AD Password Protection DC agent.

On a member server:

Install the Azure AD Password Protection proxy service.

In Azure:

Configure Azure AD Password Protection.
