Training 156-315.81 For Exam - Pass4sure 156-315.81 Exam Prep

The desktop-based practice exam software is the first format that 156-315.81 provides to its customers. It allows candidates to track their progress from start to finish and provides an easily accessible progress report. This CheckPoint 156-315.81 Practice Questions is customizable and mimics the real exam's format. It is user-friendly on Windows-based computers, and the product support staff is available to assist with any issues that may arise.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q578-Q583):

NEW QUESTION # 578

What CLI command compiles and installs a Security Policy on the target's Security Gateways?

- A. fwm fetch
- **B. fwm load**
- C. fwm compile
- D. fwm install

Answer: B

Explanation:

Explanation

The CLI command that compiles and installs a Security Policy on the target's Security Gateways is fwm load.

Fwm stands for FireWall Management, and it is a command that allows administrators to perform various management tasks on the Security Management Server or Multi-Domain Server. Fwm load takes two arguments: the name of the Security Policy and the name or IP address of the target Security Gateway or Gateway Cluster. For example:

```
[Expert@SMS]# fwm load Standard_Policy fw1
```

This command will compile and install the Standard_Policy on the Security Gateway named fw1. The other commands are either invalid or perform different functions.

NEW QUESTION # 579

Which statement is correct about the Sticky Decision Function?

- **A. It is not supported with either the Performance pack of a hardware based accelerator card**
- B. It is not required L2TP traffic
- C. Does not support SPI's when configured for Load Sharing
- D. It is automatically disabled if the Mobile Access Software Blade is enabled on the cluster

Answer: A

Explanation:

The statement that is correct about the Sticky Decision Function is It is not supported with either the Performance pack of a hardware based accelerator card. The Sticky Decision Function (SDF) is a feature that ensures that packets from the same connection are handled by the same cluster member in a Load Sharing configuration. However, SDF is not compatible with SecureXL acceleration, which is enabled by default or by using a Performance pack or a hardware based accelerator card⁴. The other statements are either incorrect or outdated about SDF. References: Check Point R81 ClusterXL Administration Guide, Sticky Decision Function - Check Point CheckMates

NEW QUESTION # 580

What command lists all interfaces using Multi-Queue?

- A. show multiqueue all
- B. show interface all
- C. cpmq set
- **D. cpmq get**

Answer: D

Explanation:

Explanation

The command that lists all interfaces using Multi-Queue is cpmq get. Multi-Queue is a feature that allows network interfaces to use multiple transmit and receive queues, which improves the performance and scalability of the Security Gateway by distributing the network load among several CPU cores. Cpmq is a command that allows administrators to configure and manage Multi-Queue settings on network interfaces.

Cpmq get lists all interfaces using Multi-Queue and shows their queue count and core distribution.

NEW QUESTION # 581

Joey wants to upgrade from R75.40 to R81 version of Security management. He will use Advanced Upgrade with Database Migration method to achieve this.

What is one of the requirements for his success?

- A. Size of the /var/log folder of the source machine must be at least 25% of the size of the /var/log directory on the target machine
- B. Size of the \$FWDIR/log folder of the target machine must be at least 30% of the size of the \$FWDIR/log directory on the source machine
- C. Size of the /var/log folder of the target machine must be at least 25GB or more
- D. Size of the /var/log folder of the target machine must be at least 25% of the size of the /var/log directory on the source machine

Answer: D

NEW QUESTION # 582

What are the main stages of a policy installation?

- A. Verification Compilation, Transfer and Commit
- B. Initiation, Conversion and Save
- C. Verification, Commit, Installation
- D. Initiation, Conversion and FWD REXEC

Answer: A

Explanation:

The main stages of a policy installation are Verification, Compilation, Transfer, and Commit. Verification is the stage where the policy is checked for syntax errors and conflicts. Compilation is the stage where the policy is translated into a binary format that can be executed by the Security Gateway. Transfer is the stage where the policy is sent from the Security Management Server to the Security Gateway. Commit is the stage where the policy is activated on the Security Gateway.
