2Pass4sure Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) practice exam (desktop and web-based) keep track of the previous attempts. These Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) practice tests also show mistakes on every attempt. So this feature helps you reduces your chance of failure in the NCP-DB-6.10 actual examination. The Nutanix NCP-DB-6.10 Exam Questions are instantly downloadable right after your purchase. In the same way, 2Pass4sure provides a money back guarantee if in any case you don't ace the NCP-DB-6.10 exam after using our product. Terms and conditions are mentioned on the guarantee page.

Under the dominance of knowledge-based economy, we should keep pace with the changeable world and renew our knowledge in pursuit of a decent job and higher standard of life. In this circumstance, possessing a NCP-DB-6.10 certification in your pocket can totally increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. Therefore our NCP-DB-6.10 Study Guide can help you with dedication to realize your dream. And only after studying with our NCP-DB-6.10 exam questions for 20 to 30 hours, you will be able to pass the NCP-DB-6.10 exam.

Hot NCP-DB-6.10 Reliable Test Testking | Amazing Pass Rate For NCP-DB-6.10: Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 | Free PDF New NCP-DB-6.10 Test Experience

Using actual Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) dumps PDF is the best way to make your spare time useful for the NCP-DB-6.10 test preparation. We also provide you with customizable desktop Nutanix NCP-DB-6.10 practice test software and web-based Nutanix NCP-DB-6.10 Practice Exam. You can adjust timings and NCP-DB-6.10 questions number of our NCP-DB-6.10 practice exams according to your training needs.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q121-Q126):

NEW QUESTION # 121

An administrator is trying to register a database server VM with NDB. Which file types will prevent the registration from being successful if located in the C:\ drive?

- A. Backup
- B. Database

- C. System
- **D. Page**

Answer: D

Explanation:

Page files are temporary files that Windows uses to store data that does not fit in the physical memory. Page files can interfere with the registration of a database server VM with NDB, as they can cause errors or performance issues. Therefore, page files should be located in a separate drive or partition from the C:\ drive, where the NDB agent and other files are installed. System, database, and backup files do not prevent the registration of a database server VM with NDB, as long as they are not corrupted or incompatible with the NDB requirements.

NEW QUESTION # 122

A customer has NDB configured to create snapshots of their production databases every 4 hours.

A developer requires a copy of the current production data at 7:00am of each day. What is the most efficient way to meet this requirement?

- **A. Configure Time Machine to create a clone from a daily snapshot at 7:00am.**
- B. Authorize the developer in RBAC to create clones as required.
- C. Configure a clone with a daily Data Refresh Schedule at 7:00am.
- D. Run a script which creates a clone from the latest snapshot at 7:00am.

Answer: A

Explanation:

Time Machine is a feature of Nutanix Era that allows you to create and manage snapshots of your databases. You can use Time Machine to create clones from any snapshot, either manually or automatically. You can also configure Time Machine to create clones from snapshots based on a schedule, such as daily, weekly, or monthly. This way, you can ensure that your clones are always up to date with the latest data from your production databases. In this scenario, the most efficient way to meet the developer's requirement is to configure Time Machine to create a clone from a daily snapshot at 7:00am. This will save the developer's time and effort, as well as reduce the storage consumption by using the existing snapshots.

NEW QUESTION # 123

What minimum account access level is required in Prism Element to deploy NDB?

- A. Viewer
- B. Backup Administrator
- C. User Administrator
- **D. Cluster Administrator**

Answer: D

Explanation:

To deploy Nutanix Database Service (NDB) in Prism Element, the minimum account access level required is Cluster Administrator. This role provides the necessary permissions to manage cluster resources (e.g., storage, networking, and VMs) required for NDB deployment, including registering the cluster with NDB, configuring storage containers, and deploying NDB components. Lower roles like Viewer or Backup Administrator lack the scope to perform these tasks, and User Administrator is focused on user management, not deployment.

NEW QUESTION # 124

An administrator needs to add multiple databases to an existing PostgreSQL instance. How should the administrator satisfy this requirement?

- A. Modify parameter profile using ncli.
- **B. Modify parameter profile using the GUI.**
- C. Modify parameter profile using post script.
- D. Modify parameter profile using NDB CLI.

Answer: B

Explanation:

To add multiple databases to an existing PostgreSQL instance managed by NDB, the administrator should use the NDB graphical user interface (GUI). The GUI provides a user-friendly way to modify the parameter profile associated with the PostgreSQL instance, allowing the addition of new databases by adjusting settings such as database names, sizes, or configurations. This process typically involves navigating to the "Databases" or "Instances" section, selecting the PostgreSQL instance, and editing the parameter profile to include additional databases.

NEW QUESTION # 125

A Linux OS is running a PostgreSQL instance that is managed by NDB. This instance is not working properly after a manual OS update, so an administrator has prepared a new Linux DB server VM that is ready to host the data from the broken DB. Which action should the administrator perform to migrate data to the new DB server VM?

- A. Follow the Provision a PostgreSQL Instance wizard.
- B. Provision a new PostgreSQL instance from the Databases page.
- C. From The Machine policy, Authorize Database Server VMs.
- **D. Register the new DB Server VM in NDB.**

Answer: D

Explanation:

In this scenario, a PostgreSQL instance managed by NDB on a Linux VM is malfunctioning after a manual OS update, and a new Linux DB server VM has been prepared to host the data. To migrate the data to the new VM, the administrator must integrate the new VM into NDB's management framework. The correct action is to register the new DB Server VM in NDB, which allows NDB to recognize and manage the VM as a database server. Once registered, the administrator can use NDB's features (e.g., cloning, restoring, or reprovisioning) to migrate the data from the broken instance to the new VM.

NEW QUESTION # 126

.....

Nutanix NCP-DB-6.10 study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your NCP-DB-6.10 Exam, if you want to pass your NCP-DB-6.10 exam and get the certification in a short time, our Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 study materials will be your best choice to help you achieve your dream.
