DP-300 Trustworthy Exam Content - Vce DP-300 Download

Free demo is available before buying DP-300 exam braindumps, and we recommend you have a try before buying, so that you can have a deeper understanding of what you are going to buy. In addition, DP-300 exam dumps cover most of knowledge points of the exam, and you can pass the exam, and in the process of learning, your professional ability will also be improved. DP-300 Exam Braindumps also have certain quantity, and it will be enough for you to pass the exam. We have online and offline chat service staff, who possess professional knowledge for DP-300 exam materials, if you have any questions, don't hesitate to contact us.

Microsoft DP-300: Important Notes

The target candidates for this certification exam are the individuals performing the job roles of a Data Management Specialist and a Database Administrator. These professionals have the responsibility for the availability, performance & security monitoring, as well as optimization of current relational database solutions. They work closely with the Azure Data Engineers to manage different aspects of operations for data platform solutions.

The applicants for the Microsoft DP-300 exam should be capable of managing and implementing the operational components of hybrid data and Cloud-native platform solutions that are developed on SQL Server and Azure Data Services. They also should have competence in using different tools and techniques to carry out their daily operations, which include using the knowledge of T-SQL for different administrative management functions.

The Microsoft DP-300 test does not require that the students meet any eligibility requirements. However, they should have a deep understanding of the concepts that are covered in the exam content.

Microsoft Administering Relational Databases on Microsoft Azure Sample

Questions (Q220-Q225):

NEW QUESTION # 220

You have a 50-TB Microsoft SQL Server database named DB1.

You need to reduce the time it takes to perform database consistency checks of DB1.

Which Transact-SQL command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Microsoft

DBCC CHECKDB ([DB1], [] with []

NOINDEX
REPAIR_FAST
REPAIR_REBUILD

ALL_ERRORMSGSGS
NO_INFOMSGSGS
PHYSICAL_ONLY

Answer:

Explanation:

Microsoft

DBCC CHECKDB ([DB1], [] with []

NOINDEX
REPAIR_FAST
REPAIR_REBUILD

ALL_ERRORMSGSGS
NO_INFOMSGSGS
PHYSICAL_ONLY

Explanation

Table Description automatically generated with low confidence

Microsoft

DBCC CHECKDB ([DB1], [] with []

NEW QUESTION # 221

You have an Azure SQL database.

You discover that the plan cache is full of compiled plans that were used only once.

You run the `select * from sys.database_scoped_configurations` Transact-SQL command and receive the results shown in the following table.

configuration_id	name	value	is_value_default
1	LEGACY_CARDINALITY_ESTIMATION	0	1
2	QUERY_OPTIMIZER_HOTFIXES	0	1
3	OPTIMIZE_FOR_AD_HOC_WORKLOADS	0	1
4	ACCELERATED_PLAN_FORCING	1	1

Microsoft

You need to relieve the memory pressure.

What should you configure?

- A. QUERY_OPTIMIZER_HOTFIXES
- B. ACCELERATED_PLAN_FORCING
- C. OPTIMIZE_FOR_AD_HOC_WORKLOADS
- D. LEGACY_CARDINALITY_ESTIMATION

Answer: C

Explanation:

Explanation

OPTIMIZE_FOR_AD_HOC_WORKLOADS = { ON | OFF }

Enables or disables a compiled plan stub to be stored in cache when a batch is compiled for the first time. The default is OFF. Once the database scoped configuration OPTIMIZE_FOR_AD_HOC_WORKLOADS is enabled for a database, a compiled plan stub will be stored in cache when a batch is compiled for the first time.

Plan stubs have a smaller memory footprint compared to the size of the full compiled plan.

<https://docs.microsoft.com/en-us/sql/t-sql/statements/alter-database-scoped-configuration-transact-sql>

NEW QUESTION # 222

You have an Azure subscription that contains an Azure SQL managed instance named SQLMi1 and a SQL Agent job named Backupdb. Backupdb performs a daily backup of the databases hosted on SQLMi1.

You need to be notified by email if the job fails.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions

- Create a SQL Server Agent alert.
- Create an operator.
- Create an extended event.
- Enable Database Mail.
- Add a failure notification to the job.

Answer Area

Navigation icons: Left arrow, Right arrow, Up arrow, Down arrow.

Answer:

Explanation:

Answer Area

- Enable Database Mail.
- Create an operator.
- Add a failure notification to the job.

- 1 - Enable Database Mail.
- 2 - Create an operator.
- 3 - Add a failure notification to the job.

NEW QUESTION # 223

SIMULATION

You need to classify the StandardCost and ListPrice columns of the SalesLT.Product table in db1. The columns must have the following configurations:

- An information type of Financial
- A sensitivity label of Confidential

To complete this task, sign in to the virtual machine. You may need to use SQL Server Management Studio and the Azure portal.

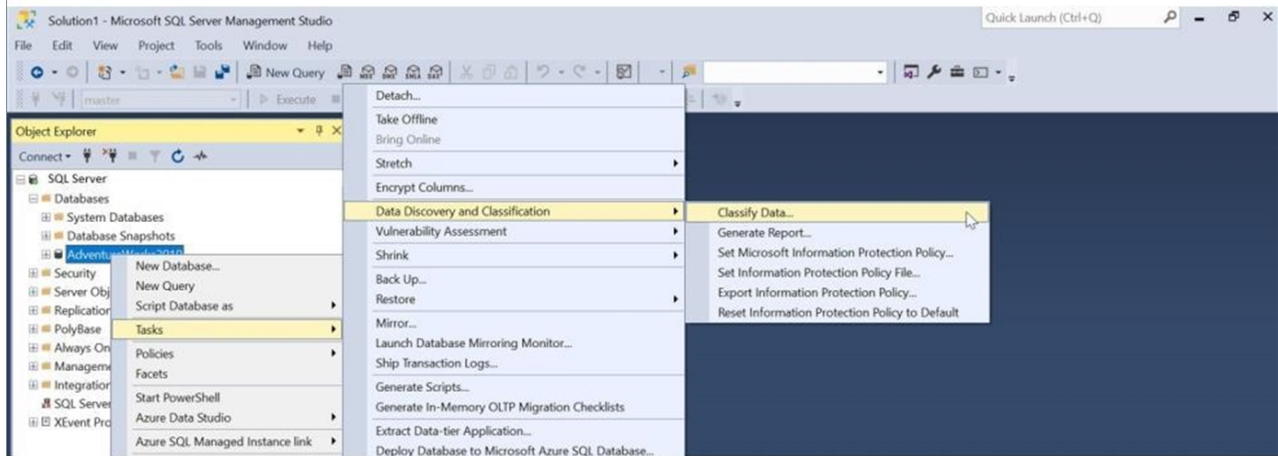

Answer:

Explanation:

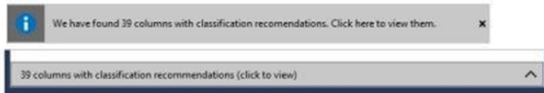

To classify your SQL Server database:

Step 1: In SQL Server Management Studio (SSMS), connect to the SQL Server.

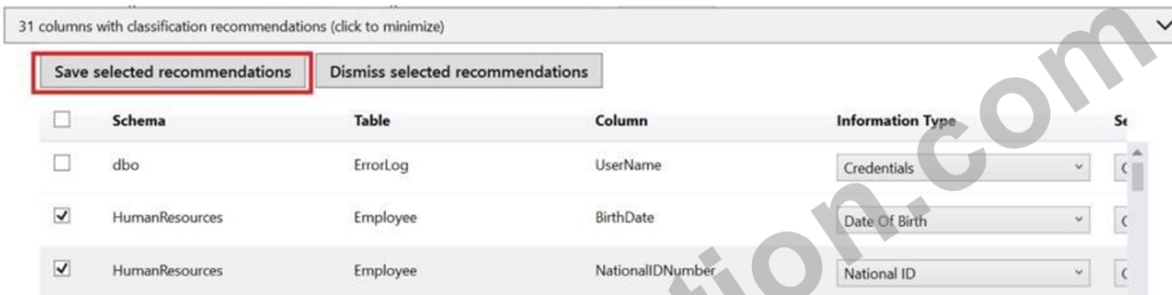

Step 2: In the SSMS Object Explorer, select the database [Here db1] that you would like to classify and choose Tasks > Data Discovery and Classification > Classify Data....

Step 3: The classification engine scans your database for columns containing potentially sensitive data and provides a list of recommended column classifications:

Step 4: You can change the recommended Information Type and Sensitivity Label using the drop-down boxes.

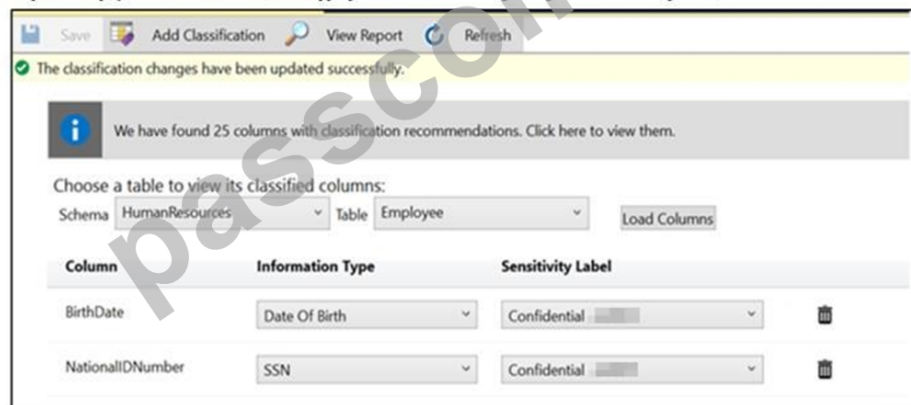

Step 5: Select columns StandardCost and ListPrice. Unselect other columns if necessary. For StandardCost and ListPrice columns select information type of Financial, and sensitivity label of Confidential.

Step 6: To apply the selected recommendations, select the Save selected recommendations button.

Step 7: To display the classified columns, select appropriate schema and corresponding table from the drop-down, then select Load Columns.

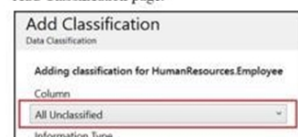

Step 8: You can also manually classify columns as an alternative, or in addition, to the recommendation-based classification:

Select Add classification in the top menu of the window.

Step 9: If you want to add classification for all the unclassified columns for a specific table in a single attempt, then select All Unclassified in the Column drop down of Add Classification page.

Other
Sensitivity Label
Confidential
Add Cancel

Step 10: To complete your classification and persistently label (tag) the database columns with the new classification metadata, select the Save button on the top menu of the window.

<https://learn.microsoft.com/en-us/sql/relational-databases/security/sql-data-discovery-and-classification>

NEW QUESTION # 224

You have an Azure SQL database that contains a table named Customer. Customer has the columns shown in the following table.

Customer_ID	Customer_Name	Customer_Phone
11001	Contoso, Ltd.	555-555-0173
11002	Litware, Inc.	555-505-3124
11003	Adventureworks Corporation	555-689-4312

You plan to implement a dynamic data mask for the Customer_Phone column. The mask must meet the following requirements:

- * The first six numerals of each customer's phone number must be masked.
- * The last four digits of each customer's phone number must be visible.
- * Hyphens must be preserved and displayed.

How should you configure the dynamic data mask? To answer, select the appropriate options in the answer area.

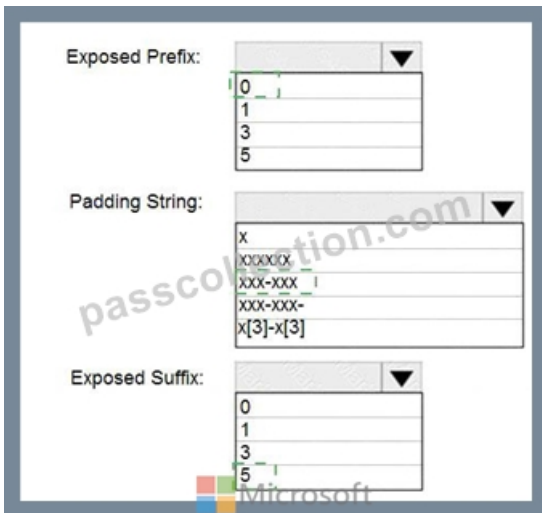

Exposed Prefix:

Padding String:

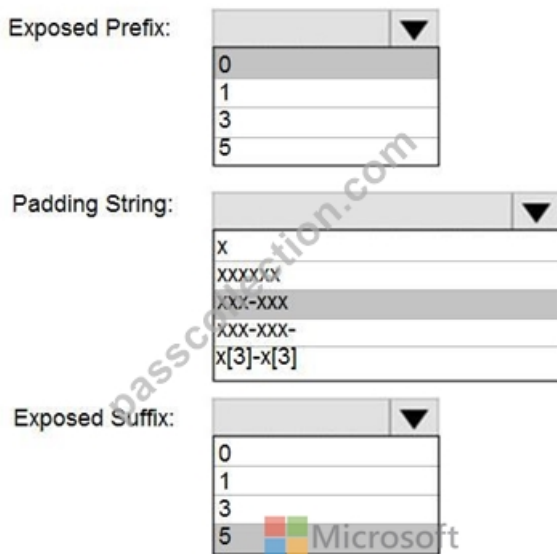

Exposed Suffix:

Answer:

Explanation:

Explanation:

Box 1: 0

Custom String : Masking method that exposes the first and last letters and adds a custom padding string in the middle. prefix, [padding],suffix Box 2: xxx-xxx Box 3: 5 Reference: <https://docs.microsoft.com/en-us/sql/relational-databases/security/dynamic-data-masking>
