## Terraform-Associate-004資料 - Terraform-Associate-004考古題分享

你可以先在網上免費下載NewDumps為你提供的部分HashiCorp Terraform-Associate-004認證考試的練習題和答案，一旦你決定了選擇了NewDumps，NewDumps會盡全力幫你通過考試。如果你發現我們提供的考試練習題和答案與實際考試練習題和答案有差別，不能使你通過考試，我們會立刻100%全額退款。

## 最新的 Terraform Associate Terraform-Associate-004 免費考試真題 (Q299-Q304):

### 問題 #299

A terraform apply can not \_\_\_\_\_ infrastructure.

- A. change
- B. provision
- C. import
- D. destroy

答案： C

解題說明：

The terraform import command is used to import existing infrastructure into Terraform's state. This allows Terraform to manage and destroy the imported infrastructure as part of the configuration. The terraform import command does not modify the configuration, so the imported resources must be manually added to the configuration after the import. References = [Importing Infrastructure]

### 問題 #300

Which of the following should you add in the `required_providers` block to define a provider version constraint?

- A. version
- **B. version = "3.1"**
- C. version: 3.1
- D. version - 3.1

**答案： B**

解題說明：

Rationale for Correct Answer (B):

Provider version constraints in Terraform are specified using the `version` argument in the `required_providers` block, e.g.:

```
terraform {
  required_providers {
    aws = {
      source = "hashicorp/aws"
    }
  }
}
```

This ensures Terraform always uses a specific provider version (or constraint expression).

Analysis of Incorrect Options:

- A. version: Incomplete, no value specified.
- C. version: 3.1: Incorrect syntax, Terraform uses = not .
- D. version - 3.1: Incorrect syntax, - is invalid here.

Key Concept:

Defining provider version constraints ensures consistent provider behavior across environments and avoids breaking changes.

Reference:

Terraform Exam Objective - Manage Terraform Resources and Providers.

### 問題 #301

You can develop a custom provider to manage its resources using Terraform.

- **A. True**
- B. False

**答案： A**

解題說明：

You can develop a custom provider to manage its resources using Terraform, as Terraform is an extensible tool that allows you to write your own plugins in Go language. You can also publish your custom provider to the Terraform Registry or use it privately.

### 問題 #302

How would you reference the volume IDs associated with the `ebs_block_device` blocks in this configuration?

- A. `aws_instance.example.ebs_block_device.[*].volume_id`
- B. `aws_instance.example.ebs_block_device[sda2,sda3].volume_id`
- **C. `aws_instance.example-ebs_block_device.*.volume_id`**
- D. `aws_instance.example.ebs_block_device.volume_ids`

**答案： C**

解題說明：

This is the correct way to reference the volume IDs associated with the `ebs_block_device` blocks in this configuration, using the splat expression syntax. The other options are either invalid or incomplete.

### 問題 #303

What functionality do providers offer in Terraform? (Pick the 3 correct responses below.)

- A. Provision resources for public cloud infrastructure services.
- B. Interact with cloud provider APIs.
- C. Provision resources for on-premises infrastructure services.
- D. Enforce security and compliance policies.
- E. Group a collection of Terraform configuration files that map to a single state file.

答案: A,B,C

解題說明:

Rationale for Correct answer:

B: Providers can manage on-premises services (e.g., vSphere, Kubernetes, GitHub, DNS, databases), not just public cloud.

C: Providers provision and manage public cloud resources (AWS, Azure, Google Cloud, etc.).

D: Providers are the plugin layer that interacts with APIs (cloud/service APIs) to create, read, update, and delete resources.

Analysis of Incorrect Options (Distractors):

A: This describes how Terraform configuration and state are organized (root module/workspace/state), not a provider function.

E: Policy enforcement is handled by separate policy-as-code systems (e.g., Sentinel/OPA integrations) rather than being a core provider responsibility.

Key Concept: Providers as plugins that implement resource/data source types and perform API interactions for many platforms.
