UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q61-Q66):

NEW QUESTION # 61
What is a key activity carried out during the User Acceptance Testing (UAT) stage?

- A. Conducting informal process shadowing
- B. Developing reusable components
- C. Testing the automation in a business-like environment by end users
- D. Reviewing project SOW

Answer: C

Explanation:
During the User Acceptance Testing (UAT) stage, the automation is tested in a business-like environment by end users to confirm that it meets the agreed-upon requirements and performs as expected under real-world conditions.
This phase is critical because it validates the automation's functionality, accuracy, reliability, and usability.
End users - usually from the Client Team- execute test cases defined earlier, often based on the Process Definition Document (PDD) and UAT Plan.
If any bugs or discrepancies are identified, they are reported and fixed by the Automation Developer. Only after successful completion of UAT is the automation approved for deployment into the production environment. This stage ensures stakeholder confidence and minimizes risk before go-live.

NEW QUESTION # 62
Which document serves as the technical blueprint during the development stage?

- A. Application Tracker
- B. Statement of Work (SOW)
- C. Solution Design Document (SDD)
- D. Process Definition Document (PDD)

Answer: C

Explanation:
The Solution Design Document (SDD) serves as the technical blueprint for the development stage of an automation project. This document is created primarily by the Solution Architect and includes detailed specifications for how the automation should be built.
The SDD outlines the To-Be process flow, module design, exception handling logic, data flows, and technical components to be used. It builds on the business requirements documented in the PDD, translating them into an actionable, structured format that developers follow to implement the solution in UiPath Studio.
A well-prepared SDD ensures the development is aligned with the business goals, reduces ambiguity, and avoids scope creep. It also assists in development reviews and helps validate that the final automation meets functional and technical expectations.

NEW QUESTION # 63
Which of the following roles is responsible for becoming well-versed in the business process to be automated?

- A. Automation Business Analyst
- B. Automation Developer
- C. Infrastructure Engineer
- D. Solution Architect

Answer: A

Explanation:
The Automation Business Analyst is responsible for becoming well-versed in the business process that is to be automated. Their role is to deeply understand the process from the business perspective and ensure that the automation solution aligns with business goals and stakeholder expectations.
They achieve this by conducting workshops, shadowing sessions, and interviews with Subject Matter Experts (SMEs) from the Client Team. They then document the As-Is process and help define the To-Be state, collaborating closely with the Solution Architect to ensure feasibility and completeness.
The Business Analyst is also instrumental in identifying automation candidates, validating business value, and defining success criteria and UAT scenarios. Their business-focused insights are essential in building automations that deliver real value and meet the organization's objectives.

NEW QUESTION # 64
Which document/app is used to record access required to build the automation and run it in UAT and production?

- A. Application Tracker
- B. Process Definition Document
- C. UAT Test Log

- D. Access Control Matrix

Answer: A

Explanation:
TheApplication Trackeris the document used torecord all access requirementsneeded for the automation project. It includes the details of what access is needed fordevelopers,robots, andtestersduringdevelopment, UAT, andproductionstages.
Access is one of the most common causes of project delays. Hence, the Application Tracker ensuresclear documentation and trackingof which systems need access provisioning, which roles need it, and what level of access is required. It helps prevent last-minute surprises where developers or bots are blocked from interacting with key systems.
By maintaining this centralized record, project managers and infrastructure engineers can coordinate effectively with client IT teams to avoid delays, improve security compliance, and ensure timely availability of required access credentials or accounts.

NEW QUESTION # 65
During which stage is the Process Definition Document (PDD) created?

- A. Kickoff
- B. Business Case and Technical Validation
- C. Process Analysis
- D. Solution Design

Answer: C

Explanation:
TheProcess Definition Document (PDD)is created during theProcess Analysisstage. This document is the output of a detailed analysis of the current (As-Is) process, conducted collaboratively by theBusiness Analyst, Solution Architect, andClient SMEs.
In this stage, workshops and shadowing sessions are conducted to gather insights into each step of the process, including decision points, exceptions, inputs, outputs, and system interactions. The purpose is to fully understand how the process works manually before planning automation.
The PDD is then used to validate scope, plan the To-Be design, and prepare for solution development. It serves as a foundational document that reduces ambiguity and ensures all stakeholders are aligned on what is being automated.

NEW QUESTION # 66
......
