

Exam Associate-Cloud-Engineer Forum - New Associate-Cloud-Engineer Practice Questions

15/06/2020 Associate Cloud Engineer Practice Exam

Associate Cloud Engineer Practice Exam

The Cloud Engineer practice exam will familiarize you with the types of questions you may encounter on the certification exam and help you determine your readiness or if you need more preparation and/or experience. Successful completion of the practice exam does not guarantee that you will pass the certification exam as the actual exam is longer and covers a wider range of topics.

New Associate-Cloud-Engineer Practice Questions & Associate-Cloud-Engineer Online Bootcamps

ActualTorrent Google Associate-Cloud-Engineer dumps contain required materials for the candidates. Once you purchase our products, all problems will be readily solved. You can try to use our free demo and download pdf real questions and answers before you make a decision. These exam simulations will help you to understand our products. Widespread scope and regularly update are

the outstanding characteristic of ActualTorrent Google Associate-Cloud-Engineer braindump. By choosing it, all IT certifications are ok.

Google Associate-Cloud-Engineer Certification Exam focuses on testing the proficiency and ability of candidates to operate and manage Google Cloud Platform services. Associate-Cloud-Engineer exam is designed to validate the knowledge and skills required to deploy, monitor, and maintain applications on Google Cloud Platform.

Below are the Problems in taking the Associate Cloud Engineer Exam

Google Certified Specialist is the most powerful certification that candidates can have on their resume. But for this, they will have to pass Associate Cloud Engineer questions. Associate Cloud Engineer is a challenging exam to pass this exam Candidates will have to work hard with the help of the right focus and preparation material passing this exam is an achievable goal. ActualTorrent help candidates by providing the most relevant and updated **Associate Cloud Engineer exam dumps**. Furthermore, We also provide the Associate Cloud Engineer practice test that will be much beneficial in the preparation. ActualTorrent aims to provide the best **Associate Cloud Engineer exam dumps** that are verified by the Google experts. If Candidates feel any doubt in the Associate Cloud Engineer practice test then our team is always there to help them. **Associate Cloud Engineer exam dumps** are the perfect way to prepare the Associate Cloud Engineer exam with good grades in the just first attempt. So, Candidates want instant success in the Associate Cloud Engineer exam with quality Associate Cloud Engineer training material then ActualTorrent is the best option for them because our management is well trained in it and we update each question of all exams on regular basis after consulting recent updates with our Google certified professionals.

Google Associate Cloud Engineer Exam Sample Questions (Q217-Q222):

NEW QUESTION # 217

You are using Deployment Manager to create a Google Kubernetes Engine cluster. Using the same Deployment Manager deployment, you also want to create a DaemonSet in the kube-system namespace of the cluster. You want a solution that uses the fewest possible services. What should you do?

- A. Add the cluster's API as a new Type Provider in Deployment Manager, and use the new type to create the DaemonSet.
- B. Use the Deployment Manager Runtime Configurator to create a new Config resource that contains the DaemonSet definition.
- C. In the cluster's definition in Deployment Manager, add a metadata that has kube-system as key and the DaemonSet manifest as value.
- D. With Deployment Manager, create a Compute Engine instance with a startup script that uses kubectl to create the DaemonSet.

Answer: D

Explanation:

Reference:

NEW QUESTION # 218

You are working with a Cloud SQL MySQL database at your company. You need to retain a month-end copy of the database for three years for audit purposes. What should you do?

- A. Set up an on-demand backup for the first of the month.
Write the backup to an Archive class Cloud Storage bucket.
- B. Save the automatic first-of-the-month backup for three years.
Store the backup file in an Archive class Cloud Storage bucket.
- C. Convert the automatic first-of-the-month backup to an export file.
Write the export file to a Coldline class Cloud Storage bucket.
- D. Set up an export job for the first of the month.
Write the export file to an Archive class Cloud Storage bucket.

Answer: B

NEW QUESTION # 219

You are deploying an application on Google Cloud that requires a relational database for storage. To satisfy your company's security policies, your application must connect to your database through an encrypted and authenticated connection that requires minimal management and integrates with Identity and Access Management (IAM). What should you do?

- A. Deploy a Cloud SQL database with the SSL mode set to encrypted only, configure SSL/TLS client certificates, and configure a database user and password.
- B. Deploy a Cloud SQL database with the SSL mode set to encrypted only, configure SSL/TLS client certificates, and configure IAM database authentication.
- C. Deploy a Cloud SQL database and configure a database user and password. Access the database through the Cloud SQL Auth Proxy.
- **D. Deploy a Cloud SQL database and configure IAM database authentication. Access the database through the Cloud SQL Auth Proxy.**

Answer: D

Explanation:

Cloud SQL Auth Proxy: This proxy ensures secure connections to your Cloud SQL database by automatically handling encryption (SSL/TLS) and IAM-based authentication. It simplifies the management of secure connections without needing to manage SSL/TLS certificates manually. IAM Database Authentication: This allows you to use IAM credentials to authenticate to the database, providing a unified and secure authentication mechanism that integrates seamlessly with Google Cloud IAM.

NEW QUESTION # 220

You've deployed a microservice called myapp1 to a Google Kubernetes Engine cluster using the YAML file specified below:

You need to refactor this configuration so that the database password is not stored in plain text. You want to follow Google-recommended practices. What should you do?

- A. Store the database password inside the Docker image of the container, not in the YAML file.
- B. Store the database password inside a ConfigMap object. Modify the YAML file to populate the DB_PASSWORD environment variable from the ConfigMap.
- **C. Store the database password inside a Secret object. Modify the YAML file to populate the DB_PASSWORD environment variable from the Secret.**
- D. Store the database password in a file inside a Kubernetes persistent volume, and use a persistent volume claim to mount the volume to the container.

Answer: C

Explanation:

NEW QUESTION # 221

You host a static website on Cloud Storage. Recently, you began to include links to PDF files on this site.

Currently, when users click on the links to these PDF files, their browsers prompt them to save the file onto their local system.

Instead, you want the clicked PDF files to be displayed within the browser window directly, without prompting the user to save the file locally. What should you do?

- A. Enable 'Share publicly' on the PDF file objects.
- B. Add a label to the storage bucket with a key of Content-Type and value of application/pdf.
- C. Enable Cloud CDN on the website frontend.
- **D. Set Content-Type metadata to application/pdf on the PDF file objects.**

Answer: D

Explanation:
