To clear the Google Cloud Digital Leader Cloud-Digital-Leader exam questions in one go and not waste your time and money, follow these tips and see the result yourself. And when you know that you are ready with all the Google Cloud Digital Leader Cloud-Digital-Leader Preparation, just relax, breathe and chill out. You have put your best efforts to mark your success and you shall get the best outcome out of it.

The Google Cloud-Digital-Leader Exam is offered by Google Cloud and is available to anyone who wants to take it. There are no prerequisites for taking the exam, but it is recommended that individuals have some experience working with Google Cloud Platform before taking it. Cloud-Digital-Leader exam is also available in multiple languages, making it accessible to individuals all over the world.

Google Cloud Digital Leader Certification Exam is an excellent opportunity for professionals who want to validate their skills and gain recognition for their expertise in the digital domain. Google Cloud Digital Leader certification exam is recognized globally and can help individuals to stand out from the crowd in a competitive job market. Moreover, the certification exam can boost an

individual's credibility and provide them with new opportunities for career growth and development.

Testking Cloud-Digital-Leader Learning Materials & Valid Cloud-Digital-Leader Exam Review

Different from the common question bank on the market, Cloud-Digital-Leader actual exam are scientific and efficient learning system for a variety of professional knowledge that is recognized by many industry experts. We have carried out the reforms according to the development of the digital devices not only on the content of our Cloud-Digital-Leader Exam Torrent, but also on the layouts since we provide the latest and precise information to our customers, so there is no doubt you will pass the Cloud-Digital-Leader exam with our latest Cloud-Digital-Leader exam questions.

Google Cloud Digital Leader Sample Questions (Q386-Q391):

NEW QUESTION # 386

How does the resource hierarchy in Google Cloud help organizations implement security policies?

- **A. Policies can be applied at the folder level and are inherited by projects inside the folder**
- B. Projects in the resource hierarchy are not affected by security policies.
- C. Policies can only be applied to individual projects
- D. Policies can only be applied at the organization level and affect all projects

Answer: A

NEW QUESTION # 387

Your organization is on a critical path with recently developed applications. They are going into production in a month. A few million users are expected to use the new application. They want to ensure minimum disruption when the application goes live. Any issues have to be dealt with within minutes and resolved as quickly as possible. Which Support package should they take?

- **A. Premium Support**
- B. Standard Support
- C. Enhanced Support
- D. Basic Support

Answer: A

Explanation:

Explanation:

Premium Support will have a 15-minute response time with 24/7 response for high & critical-impact issues.

NEW QUESTION # 388

Your organization runs many workloads in different Google Cloud projects, each linked to the same billing account. Each project's workload costs can vary from month to month, but the overall combined cost of all projects is relatively stable. Your organization needs to optimize its cost.

What should your organization do?

- A. Create a billing account per project, and link each project to a different billing account
- B. Move all workloads from all different projects into one single consolidated project
- C. Purchase a commitment per project for each project's usual minimum
- **D. Turn on committed use discount sharing, and create a commitment for the combined usage**

Answer: D

Explanation:

Explanation

Turn on committed use discount sharing, and create a commitment for the combined usage. Sharing your committed use discounts across all your projects reduces the overhead of managing discounts on a per-project basis, and maximizes your savings by pooling all your discounts across your projects' resource usage. If you have multiple projects that share the same Cloud Billing account, you can enable committed use discount sharing so all of your projects within that Cloud Billing account share all of your committed use discount contracts. Your sustained use discounts are also pooled at the same time. That is, sustained use discounts are calculated using the total resources across these projects, rather than just the resources within a single project.

Text Description automatically generated

Sharing committed use discounts across projects

Sharing your committed use discounts across all your projects reduces the overhead of managing discounts on a per-project basis, and maximizes your savings by pooling all your discounts across your projects' resource usage.

If you have multiple projects that share the same Cloud Billing account, you can [enable committed use discount sharing](#) so all of your projects within that Cloud Billing account share all of your committed use discount contracts. Your sustained use discounts are also pooled at the same time. That is, sustained use discounts are calculated using the total resources across these projects, rather than just the resources within a single project.

For example, if you purchase two commitment contracts for a total of 160 cores, and you run 200 cores during the month, you will receive committed use discounts for 160 cores across the projects that used them. The additional 40 cores will be billed at on-demand, non-committed use rates. After you purchase a set amount of commitments, you're billed for those commitments monthly, even if you don't use them. For example, if you purchase commitments for 160 cores, you're billed the committed use rates for those 160 cores for the whole month, even if you don't use them. See [Understanding discount sharing](#) for cost-saving utilization recommendations.

NEW QUESTION # 389

An organization has an e-commerce application that requires a cost-effective, transactional database. The application will only serve customers in a single region. Which service should they use?

- A. Cloud Bigtable
- **B. Cloud SQL**
- C. BigQuery
- D. Cloud Spanner

Answer: B

Explanation:

The correct answer is C. Cloud SQL. Here's why:

* Context of the Question: The organization needs a cost-effective, transactional database for an e-commerce application serving customers in a single region. A transactional database is needed to handle online transactions with ACID (Atomicity, Consistency, Isolation, Durability) properties.

* Google Cloud Product Relevance:

* Cloud SQL is a fully managed relational database service for MySQL, PostgreSQL, and SQL Server. It is cost-effective, supports transactional workloads, and is suitable for applications with regional data residency requirements. This makes it ideal for an e-commerce application that only serves customers in a single region.

* Why Not Other Options:

* A. Cloud Spanner: Cloud Spanner is a globally distributed, strongly consistent database designed for large-scale, mission-critical applications. It is more expensive and better suited for applications requiring global distribution and high availability across multiple regions.

* B. Cloud Bigtable: Cloud Bigtable is a NoSQL wide-column database designed for low-latency, high-throughput workloads, such as analytics. It does not support ACID transactions, making it unsuitable for transactional workloads like an e-commerce application.

* D. BigQuery: BigQuery is a fully managed data warehouse designed for large-scale analytics. It is not suitable for transactional database needs.

Google Cloud Digital Leader References:

* For more details on Cloud SQL, refer to the Cloud SQL documentation in the Google Cloud platform.

NEW QUESTION # 390

An information security organization must ensure that its service providers have ISO 27001 certification. They must also access supporting documentation. Which Google Cloud tool should they use?

- A. Compliance Reports Manager
- B. Network Intelligence Center
- C. Cloud Monitoring
- D. Security Command Center

Answer: A

Explanation:

The correct answer is C. Compliance Reports Manager. Here's why:

Context of the Question: The organization needs to ensure that its service providers have ISO 27001 certification and access supporting documentation. ISO 27001 is an international standard for information security management systems (ISMS), and organizations often need to verify compliance through certified reports.

Google Cloud Product Relevance:

Compliance Reports Manager is a tool within the Google Cloud Console that provides access to various compliance and security documentation, including ISO 27001 certification. It allows customers to view and download compliance reports, making it the appropriate choice for verifying certifications and accessing related documents.

Why Not Other Options:

A. Network Intelligence Center: This tool is designed for network monitoring, visibility, and troubleshooting and is unrelated to compliance management.

B. Cloud Monitoring: This is a tool for observability of your cloud resources, monitoring performance, and uptime, not for compliance documentation.

D. Security Command Center: This tool provides a centralized view of your security posture, including identifying and managing risks, but it does not offer compliance documentation or reports.

Google Cloud Digital Leader Reference:

Refer to Compliance Reports Manager in the Google Cloud documentation for details on accessing compliance and security documentation, including certifications like ISO 27001.

NEW QUESTION # 391

.....

These Google Cloud Digital Leader (Cloud-Digital-Leader) exam questions help applicants prepare well prior to entering the actual Google Cloud Digital Leader (Cloud-Digital-Leader) exam center. Due to our actual Cloud-Digital-Leader Exam Dumps, our valued customers always pass their Google Cloud-Digital-Leader exam on the very first try hence, saving their precious time and money too.
