## Certification Data-Architect Exam Cost, Data-Architect Certification Sample Questions

If you are considering to get help from the exam braindumps for you to pass the exam, you need to get a reliable and authentic valid Data-Architect study material, which will help you to pass exams with an ease. But, this is also a must have updated Data-Architect exam questions to save you from the tedious task of collecting resources from multiple sources. And at the same time, the Data-Architect learning guide must stand the test of the market and can make the customers understood by all over the world. And these are exactly the advantages of our Data-Architect practice engine has. Just come and have a try!

## Salesforce Certified Data Architect Sample Questions (Q129-Q134):

**NEW QUESTION # 129**
Universal Containers (UC) is going thought major reorganization of their sales team. This would require changes to a large a number of group members and sharing rules. UCs administrator is concerned about long processing time and failure during the process. What should a Data architect implement to make changes efficiently?

- A. Log out all users and make changes to sharing rules.
- B. Enable Defer Sharing Calculation prior to making sharing rule changes.
- C. Log a case with salesforce to make sharing rule changes.
- D. Delete old sharing rules and build new sharing rules

**Answer: B**

Explanation:
The correct answer is B. To make changes efficiently, a data architect should enable Defer Sharing Calculation prior to making sharing rule changes. This will allow the administrator to make multiple changes to sharing rules without recalculating them after each change, which can take a long time and cause failures. The sharing rules can be recalculated later when there are fewer users online or during off-peak hours. Option A is incorrect because logging a case with salesforce to make sharing rule changes will not speed up the process or prevent failures. Option C is incorrect because deleting old sharing rules and building new sharing rules will not reduce the processing time or failure rate. Option D is incorrect because logging out all users and making changes to sharing rules will disrupt the business operations and may not be feasible.

**NEW QUESTION # 130**
NTO would like to retrieve their SF orgs meta data programmatically for backup within a various external. Which API is the best fit for accomplishing this task?

- A. Bulk API in serial mode
- B. Tooling API
- C. SOAP API
- D. Metadata API

**Answer: D**

**NEW QUESTION # 131**
Universal Containers has successfully migrated 50 million records into five different objects multiple times in a full copy sandbox. The Integration Engineer wants to re-run the test again a month before it goes live into Production. What is the recommended approach to re-run the test?

- A. Refresh the full copy sandbox and re-run the data migration test.
- B. Hard delete all 5 objects' data and re-run the data migration test.
- C. Truncate all 5 objects quickly and re-run the data migration test.
- D. Truncate all 5 objects and hard delete before running the migration test.

**Answer: A**

Explanation:
The recommended approach to re-run the test is to refresh the full copy sandbox and re-run the data migration test. A full copy sandbox is a replica of the production Org, including all data, metadata, and attachments.
Refreshing a full copy sandbox means creating a new copy of the production Org and replacing the existing sandbox. This would ensure that the test is run on a clean and up-to-date environment, without any leftover data or configuration from previous tests. Truncating or hard deleting objects would not be sufficient, because they would not remove all the data or metadata from the sandbox, and they could also affect other dependent objects or processes.

**NEW QUESTION # 132**
Universal Containers (UC) has implemented Salesforce, UC is running out of storage and needs to have an archiving solution, UC would like to maintain two years of data in Saleforce and archive older data out of Salesforce.
Which solution should a data architect recommend as an archiving solution?

- A. Use a third-party backup solution to backup all data off platform.
- B. Build a batch join move all records off platform, and delete all records from Salesforce.
- C. Build a batch join to move two-year-old records off platform, and delete records from Salesforce.
- D. Build a batch job to move all restore off platform, and delete old records from Salesforce.

**Answer: C**

Explanation:
The data architect should recommend building a batch job to move two-year-old records off platform, and delete records from Salesforce as an archiving solution. A batch job is a process that runs in the background and performs operations on large volumes of data in Salesforce. By building a batch job that moves two-year-old records off platform to an external storage system, such as

Amazon S3 or Google Cloud Storage, and deletes them from Salesforce, the data architect can reduce the storage consumption and improve the performance of Salesforce org. Option A is incorrect because using a third-party backup solution to backup all data off platform will not free up any storage space in Salesforce, unless the data is also deleted from Salesforce after backup. Option B is incorrect because building a batch job to move all records off platform, and delete all records from Salesforce will result in losing all the current data in Salesforce, which may not be desirable or feasible. Option D is incorrect because building a batch job to move all restore off platform, and delete old records from Salesforce does not make sense, as restore implies restoring data back to Salesforce, not moving it off platform.

## NEW QUESTION # 133

Get Cloudy Consulting needs to evaluate the completeness and consistency of contact information in Salesforce. Their sales reps often have incomplete information about their accounts and contacts. Additionally, they are not able to interpret the information in a consistent manner. Get Cloudy Consulting has identified certain ""key"" fields which are important to their sales reps.
What are two actions Get Cloudy Consulting can take to review their data for completeness and consistency? (Choose two.)

- A. Run a report which shows the last time the key fields were updated.
- B. Run a report that shows the percentage of blanks for the important fields.
- C. Run a process that can fill in default values for blank fields.
- D. Run one report per key field, grouped by that field, to understand its data variability.

**Answer: A,B**

Explanation:
Running a report that shows the last time the key fields were updated can help Get Cloudy Consulting identify stale or outdated data and prioritize data cleansing activities. Running a report that shows the percentage of blanks for the important fields can help Get Cloudy Consulting measure the completeness of their data and identify gaps or missing value

## NEW QUESTION # 134

......

If you still feel nervous for the exam, our Data-Architect Soft test engine will help you to release your nerves. Data-Architect Soft test engine can stimulate the real environment, and you can know the general process of exam by using the exam dumps. What's more, we provide you with free update for one year, and you can get the latest information for the Data-Architect Learning Materials in the following year. We have online service stuff, if you have any questions about the Data-Architect exam braindumps, just contact us.
