NEW QUESTION # 1171

Which of the following would NOT be considered a penetration testing technique?

- A. Scanning
- **B. Data manipulation**
- C. Sniffing
- D. War dialing

Answer: B

Explanation:

The correct answer is Data manipulation. Data manipulation describes the corruption of data integrity to perform fraud for personal gain or other reasons.

External penetration testing should not alter the data in any way. The other three are common penetration techniques.

NEW QUESTION # 1172

What do Capability Maturity Models (CMM) serve as a benchmark for in an organization?

- A. Procedures in systems development
- B. Experience in the industry
- C. Human resource planning efforts
- D. Definition of security profiles

Answer: A

Explanation:

Capability Maturity Models (CMM) are frameworks that describe the key elements of effective processes for various domains, such as software engineering, project management, or information security. CMM serve as a benchmark for an organization to assess its current level of maturity and identify the areas for improvement.

CMM can help an organization to establish, standardize, measure, control, and optimize its procedures in systems development, which is the process of creating, maintaining, and enhancing information systems.

Experience in the industry, definition of security profiles, and human resource planning efforts are not the main focus of CMM, although they may be influenced by the maturity level of the organization. NEW QUESTION # 1173

A business continuity plan is an example of which of the following?

- A. Corrective control
- B. Preventive control
- C. Compensating control
- D. Detective control

Answer: A

Explanation:

Explanation/Reference:

Explanation:

A corrective control, such as business continuity plan (BCP), consists of instructions, procedures, or guidelines used to reverse the effects of an unwanted activity, such as attacks or errors. In particular a BCP is the assessment of a variety of risks to organizational processes and the creation of policies, plans, and procedures to minimize the impact those risks might have on the organization if they were to occur.

Incorrect Answers:

B: A business continuity plan is A detective control. A detective control is an access control deployed to discover unwanted or unauthorized activity. Examples of detective access controls include security guards, supervising users, incident investigations, and intrusion detection systems (IDSs).

C: A preventive control is any security mechanism, tool, or practice that can deter and mitigate undesirable actions or events. A business continuity plan is A preventive control.

D: A compensating control is a data security measure that is designed to satisfy the requirement for some other security measure that is deemed too difficult or impractical to implement. A business continuity plan is A compensating control.
