SDS Interactive Practice Exam & Valid SDS Exam Sample

It is known to us that to pass the SDS exam is very important for many people, especially who are looking for a good job and wants to have a SDS certification. Because if you can get a certification, it will be help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the SDS Certification will help you get a higher salary. We believe that our company has the ability to help you successfully pass your exam and get a SDS certification by our SDS exam torrent.

DASCA Senior Data Scientist Sample Questions (Q83-Q88):

NEW QUESTION # 83
Which of the following is NOT Structured data?

- A. CSV files
- B. XML
- C. None of the above
- D. Data tables
- E. Relational databases

Answer: B

Explanation:
Structured data refers to highly organized data stored in predefined formats such as rows and columns.
Relational databases (Option A): Structured.
Data tables (Option B): Structured.
CSV files (Option C): Structured because they are tabular with rows and columns.
XML (Option D): Not structured but semi-structured because it stores hierarchical information with tags and attributes.
Thus, the correct answer is Option D (XML).

NEW QUESTION # 84
Which of the following is FALSE for Social Network Analysis (SNA)?

- A. Social Network Analysis (SNA) is an example of graph analysis
- B. Social Network Analysis (SNA) is an example of trend analysis
- C. None of the above
- D. SNA is used to investigate social structures and relationships across social networks
- E. SNA characterizes networked structures in terms of nodes and the ties or edges that connect them

Answer: B

Explanation:
Social Network Analysis (SNA) is a powerful analytical method that applies graph theory to study relationships among entities (people, organizations, computers, etc.).
Option A: Correct. SNA is indeed an example of graph analysis because it models entities as nodes and their relationships as edges/ties.
Option B: FALSE. SNA is not an example of trend analysis. Trend analysis focuses on temporal patterns (time series), while SNA is structural and relational.
Option C: Correct. SNA investigates structures such as communities, influencers, and information diffusion in networks.
Option D: Correct. The characterization of nodes and edges is central to SNA.
Option E: Incorrect, since we've identified Option B as false.
Thus, the false statement is Option B.

NEW QUESTION # 85
SpamAssassin has been developed to detect:

- A. Email with virus
- B. Spam emails
- C. None of the above
- D. Email with big attachments

Answer: B

Explanation:

Apache SpamAssassin is one of the most widely used open-source tools for spam email detection.
It applies a rule-based system combined with Bayesian filtering, heuristics, and collaborative filtering methods to classify incoming emails as spam or legitimate.
Option A (Spam emails): Correct, this is the main function.
Option B (Big attachments): Incorrect. Large attachment filtering is not its primary purpose.
Option C (Email with virus): Incorrect. That falls under antivirus or malware detection tools, not SpamAssassin.
Option D: Incorrect since A is valid.
Thus, the correct answer is Option A (Spam emails).

NEW QUESTION # 86

Which of the following standardizes scores similar to a percentile rank but preserves equal interval properties of a Z-score?

- A. Medium Curve Equivalent (MCE)
- B. High Curve Equivalent (HCE)
- C. None of the above
- D. Trend analysis
- E. Normal Curve Equivalent (NCE)

Answer: E

Explanation:
Normal Curve Equivalent (NCE) scores are standardized scores designed to:
Range between 1 and 99.
Be comparable to percentile ranks but with the advantage of equal-interval properties like Z-scores.
This makes NCE scores useful in educational assessments, survey analysis, and statistical modeling.
Option A (Trend analysis): Incorrect. Not related to score standardization.
Option B (Correct): NCE fits the definition perfectly.
Option C (HCE) & D (MCE): Not recognized standard measures in statistics.
Option E: Incorrect, since Option B is valid.
Thus, the correct answer is Option B: Normal Curve Equivalent (NCE).

NEW QUESTION # 87

In regression, the principle of machine learning is used to optimize the parameters to:

- A. Calculate the closest possible outcomes
- B. None of the above
- C. Both A and B
- D. Minimize the approximation error

Answer: C

Explanation:
Regression is a supervised learning technique where a model estimates the relationship between input features (independent variables) and an output (dependent variable).
Option A: Correct. The learning process involves optimizing model parameters (e.g., coefficients in linear regression) to minimize approximation error. Common loss functions include Mean Squared Error (MSE) or Mean Absolute Error (MAE).
Option B: Correct. Minimizing error enables the model to produce the closest possible outcomes to the actual observed values, ensuring accurate predictions.
Option C: Correct, since both A and B are true.
Option D: Incorrect.
Thus, regression optimization in machine learning aims to minimize approximation error and generate closest possible outcomes, making Option C the correct answer.
