You can also set the number of CheckPoint 156-521 dumps questions to attempt in the practice test and time as well. The web-based CheckPoint 156-521 practice test software needs an active internet connection and can be accessed through all major browsers like Chrome, Edge, Firefox, Opera, and Safari. Our Desktop-based CheckPoint 156-521 Practice Exam Software is very suitable for those who don't have an internet connection. You can download and install it within a few minutes on Windows-based PCs only and start preparing for the Check Point Certified Automation Specialist - R81.20 (CCAS) exam.

CheckPoint Check Point Certified Automation Specialist - R81.20 (CCAS) Sample Questions (Q38-Q43):

NEW QUESTION # 38

After adding a host using `mgmt_cli --format json`, how would you extract only the name field using jq?

- A. `jq '.name'`
- B. `jq '.host'`
- C. `jq 'name'`
- D. `jq '.object.name'`

Answer: A

Explanation:

When `mgmt_cli` returns the output with `--format json`, the resulting JSON includes "name" at the top level. Running `jq '.name'` extracts just the value of that field.

NEW QUESTION # 39

What should an API script do after a failed login attempt?

- A. Restart the Management Server
- **B. Wait and retry after a timeout**
- C. Skip authentication
- D. Retry without delay indefinitely

Answer: B

Explanation:

To avoid brute-force risks and rate limits, the script should wait before retrying. Repeated login failures may result in temporary blocks or security alerts, so retries must be delayed and controlled.

NEW QUESTION # 40

If Postman receives HTML instead of JSON when hitting /login, what is the likely cause?

- A. User account is locked
- B. API key is missing
- C. Postman license expired
- **D. The login method is GET instead of POST**

Answer: D

Explanation:

If you use the wrong HTTP method (GET instead of POST), the server may return the WebUI HTML page instead of the API response. Ensure you're using POST for login.

NEW QUESTION # 41

Where does Check Point store SIC certificates?

- A. \$FWDIR/conf
- **B. \$CPDIR/conf**
- C. \$MDSDIR/etc
- D. \$PDIR/security

Answer: B

NEW QUESTION # 42

Which of the following are required to enable API access to remote clients? (Choose two)

- A. Enable Expert Mode on gateways
- **B. Use SmartConsole to allow external API access**
- **C. Configure allowed client IPs**
- D. Set API mode to "automatic"

Answer: B,C

Explanation:

To enable API access from external clients, you must allow external connections in SmartConsole and explicitly list allowed IPs. These steps ensure controlled and secure remote API usage.
