Reliable DP-300 Dumps Files, DP-300 New Practice Materials

Selecting NewPassLeader can 100% help you pass the exam. According to Microsoft DP-300 test subjects' changing, we will continue to update our training materials and will provide the latest exam content. NewPassLeader can provide a free 24-hour online

customer service for you. If you do not pass Microsoft Certification DP-300 Exam, we will full refund to you.

Microsoft DP-300 exam is a challenging but rewarding certification that can help professionals advance their careers in database administration and demonstrate their expertise in managing relational databases on the Microsoft Azure platform. It is highly recommended for professionals who work with Azure SQL databases and want to validate their skills and knowledge in this field.

The Microsoft DP-300 exam covers a wide range of topics, including configuring and managing databases, securing databases, implementing disaster recovery solutions, and monitoring and optimizing database performance. Candidates are expected to have a solid understanding of Azure SQL Database, SQL Server in Azure Virtual Machines, and Azure Cosmos DB.

To prepare for the Microsoft DP-300 Exam, candidates are advised to have a strong understanding of database administration concepts and practices, as well as familiarity with the Microsoft Azure cloud platform. Microsoft offers a range of training courses and study materials to help candidates prepare for the exam, including instructor-led training, online courses, and study guides. Additionally, candidates can take advantage of practice exams and other resources to ensure that they are fully prepared for the exam.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q284-Q289):

NEW QUESTION # 284

You need to identify the event_file target for monitoring DB3 after the migration to Azure SQL Database. The solution must meet the management requirements.

What should you use as the event_file target?

- A. an Azure Blob Storage container
- B. an Azure SQL database
- C. an Azure Files share
- D. a SQL Server filegroup

Answer: A

NEW QUESTION # 285

You create a new Azure SQL managed instance named SQL1 and enable Database Mail extended stored procedure. You need to ensure that SQL Server Agent jobs running on SQL 1 can notify when a failure occurs. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in correct order.

Answer:

Explanation:

- 1 - Create a Database Mail account.
- 2 - Create a profile named AzureManagedInstance_dbmail_profile.
- 3 - Enable email notifications upon failure.

NEW QUESTION # 286

From a website analytics system, you receive data extracts about user interactions such as downloads, link clicks, form submissions, and video plays.

The data contains the following columns:

You need to design a star schema to support analytical queries of the data. The star schema will contain four tables including a date dimension.

To which table should you add each column? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 287

You have an Azure subscription that contains an instance of SQL Server on Azure Virtual Machines. The virtual machine hosts a database named DB1. You need to monitor DB1 by using Extended Events. The solution must meet the following requirements:

- * Capture raw event data and store the data in Azure Storage.
- * Minimize the performance impact of capturing extended events.

How should you complete the Transact-SQL statement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 288

Hotspot Question

You have an Azure SQL database named SQL1.

You need to monitor the resource usage of SQL1 by using a dynamic management view. The solution must return the average memory usage and the peak CPU usage.

How should you complete the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: `max_worker_percent`

Maximum concurrent workers (requests) in percentage of the limit of the database's service tier.

Box 2: `dm_db_resource_stats`

This dynamic management view (DMV) in Azure SQL Database provides real-time resource utilization data.

The query `SELECT avg_memory_usage_percent FROM sys.` is used in Azure SQL Database to retrieve the average memory usage percentage of a database. This information is provided by the `sys.dm_db_resource_stats` dynamic management view (DMV).

The `avg_memory_usage_percent` column represents the average memory usage as a percentage of the maximum allowed memory for the database's service tier and performance level.
