- A. It sends the switch configuration to Cisco TAC.
- B. It schedules a backup on a Cisco switch using EEM.
- **C. It sends a Cisco device backup to a remote destination.**
- D. It backs up Cisco switches to Cisco Prime infrastructure.

**Answer: C**

**NEW QUESTION # 308**

An engineer must suggest a deployment model for a newly developed application. The engineer has a small starting budget and lacks technical knowledge and infrastructure to implement store, operating system and database services to support the application deployment. The engineer also needs usage data related to the service and the ability to elastically scale the deployment as customer demands grow. Which two models must be used to meet the requirements? (Choose two)

- A. software as a service
- B. private cloud
- C. platform as a service
- **D. infrastructure as a service**
- **E. public cloud**

**Answer: D,E**

**NEW QUESTION # 309**

A network engineer repeatedly saves a configuration on Catalyst switches to NVRAM using the write memory command. What action should be taken to implement the same action on Nexus switches?

- **A. Use the alias command to use the write memory command.**
- B. Use the write memory command to save the configuration.
- C. Use the exit command to leave the configuration mode and save the configuration automatically.
- D. Use the wri command to use the copy running-config startup-config command.

**Answer: A**

**NEW QUESTION # 310**

A host in EPG Client wants to talk to a webserver in EPG Web. A contract with default settings is defined between EPG Client and EPG Web, which allows TCP communication initiated by the client toward the webserver with TCP destination port 80. Which statement is true?

- A. If EPG Web is made a preferred group member, a contract between EPG Client and EPG Web is no longer required for the host in EPG Client to reach the webserver in EPG Web.
- B. If v3Any is configured to consume and provide a "deny all" contract, traffic between EPG Client and EPG Web is no longer allowed.
- **C. The host in EPG Client can connect to TCP destination port 80 on the webserver in EPG Web. The webserver can initiate a separate TCP connection to a host port with TCP source port 80.**
- D. The host in EPG Client can connect to TCP destination port 80 on the webserver in EPG Web. The webserver will not be able to initiate a separate TCP connection to a host port with TCP source port 80.

**Answer: C**

**NEW QUESTION # 311**
