## Salesforce Certified Omnistudio Consultant Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which Omniscript element retrieves Salesforce data that is then returned in Value/Label pairs and becomes available for selection in a dropdown list.

- A. Calculation Action
- B. Lookup

- C. Select
- D. Date Mapper Extract Action

**Answer: C**

Explanation:

Below is the formatted question with a 100% verified answer based on official Salesforce OmniStudio documentation, including a comprehensive explanation and references.

**NEW QUESTION # 59**

A company wants to create a guided process for their customers. The process needs to retrieve data from Salesforce as well as external systems, and the steps of the process will branch depending on input from the user. Users will complete the process in a single session.

How should the consultant design the solution to meet these requirements?

- A. OmniScripts and DataRaptors
- B. FlexCards and Integration Procedures
- C. FlexCards and DataRaptors
- D. **OmniScripts and Integration Procedures**

**Answer: D**

Explanation:

The consultant should design the solution using OmniScripts and Integration Procedures to meet these requirements. An OmniScript is a tool that can design customer interactions using elements and actions. The consultant can use an OmniScript to create the guided process for the customers. An Integration Procedure is a tool that can execute multiple DataRaptor actions, such as Extract, Transform, and Load, and also invoke REST or SOAP services. The consultant can use Integration Procedures to retrieve data from Salesforce as well as external systems, and store it in a JSON object for display or processing in the OmniScript

**NEW QUESTION # 60**

In which two scenarios should a DataRaptor be used?

Choose 2 answers

- A. **To send an SMS alert to the user when a process completes**
- B. To retrieve an account and Its related contacts
- C. To retrieve today's financial news
- D. **To merge the city and state fields into a single field**

**Answer: A,D**

Explanation:

The two scenarios where a DataRaptor should be used are: to retrieve an account and its related contacts, and to merge the city and state fields into a single field. A DataRaptor is a tool that can read, transform, and write data from Salesforce objects or JSON objects. A DataRaptor Extract can retrieve data from one or more Salesforce objects using SOQL queries, and store it in an Interface object or a JSON object. A DataRaptor Transform can map data from one Interface object or JSON object to another, and apply formulas and functions to transform the data. For example, a DataRaptor Transform can concatenate two fields into one using the + operator

**NEW QUESTION # 61**

A business needs a 360° view of their accounts, including a FlexCard to display all of the products sold to the account. The business identified 20 different data elements and 10 actions that users would need when viewing the product information. Once all of the elements were collected together on the FlexCard, it looked cluttered.

What FlexCard feature should the consultant recommend to address this issue?

- A. Actions
- B. Zones
- C. **Flyouts**
- D. States

### **Answer: C**

Explanation:

The FlexCard feature that the consultant should recommend to address this issue is Flyouts. A Flyout is a pop-up window that can display additional information or actions for a FlexCard. The consultant can use Flyouts to show some of the data elements and actions that are not essential for the main view of the product information, such as product details, specifications, reviews, etc. This way, the consultant can reduce the clutter on the main FlexCard and improve the user experience

### **NEW QUESTION # 62**

A business wants to display cases for an account using FlexCards. The cases should be organized in a tabular list by case status, so that Escalated cases appear first, followed by Active and Closed cases.

Which FlexCard feature should the consultant recommend to meet this requirement?

- A. A Datatable element with the Group By property
- B. Child FlexCards in a parent FlexCard with the Group By property
- C. States with conditions to filter by case status
- D. flyout with child FlexCards with conditions to filter by case status

### **Answer: A**

Explanation:

The FlexCard feature that the consultant should recommend to meet this requirement is a Datatable element with the Group By property. A Datatable element is an element that can display data in a tabular format, with columns and rows. The consultant can use a Datatable element to display the cases for an account, with columns for case status, case number, subject, etc. The Group By property is a property that allows grouping data by one or more fields, such as case status. The consultant can use the Group By property to organize the cases by case status, so that Escalated cases appear first, followed by Active and Closed cases

### **NEW QUESTION # 63**

.....

The countless candidates have already passed their Plat-Con-201 certification exam and they all used the real, valid, and updated DumpStillValid Plat-Con-201 exam questions.
