Another great way to assess readiness is the GH-900 web-based practice test. This is one of the trusted online Microsoft GH-900 prep materials to strengthen your concepts. All specs of the desktop software are present in the web-based Microsoft GH-900 Practice Exam. MS Edge, Opera, Firefox, Chrome, and Safari support this GH-900 online practice test.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Topic 2	<ul style="list-style-type: none"> • Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 3	<ul style="list-style-type: none"> • Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 4	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 5	<ul style="list-style-type: none"> • Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 6	<ul style="list-style-type: none"> • Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.

Microsoft GitHub Foundations Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which of the following best describes GitHub Copilot?

- A. An AI tool designed to replace software developers
- B. A Visual Studio Code extension for developing AI solutions
- C. An advanced search tool to intelligently reuse existing code in your projects
- **D. An AI pair programmer that offers autocomplete-style suggestions**

Answer: D

Explanation:

GitHub Copilot is described as an AI pair programmer that offers autocomplete-style suggestions. It is a tool integrated into development environments like Visual Studio Code that helps developers by providing code suggestions as they type. Copilot can suggest entire lines or blocks of code based on the context of what you're writing, making it a valuable assistant in coding, but not a replacement for developers.

NEW QUESTION # 50

How can a user create a repository template, and what permissions are required?

- A. With Maintain permissions, navigate to Repository settings and select Template Repository.
- B. With Admin permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- C. With Maintain permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- **D. With Admin permissions, navigate to Repository settings and select Template Repository.**

Answer: D

Explanation:

Creating a repository template in GitHub requires specific steps and permissions:

* Creating a Repository Template:

* Option A is correct because a user with Admin permissions can navigate to the repository's settings and enable the "Template Repository" option. This allows other users to generate new repositories from this template, which includes all branches, tags, and file history.

* Other Options:

* Option B is incorrect because "Maintain" permissions do not allow the creation of repository templates, and the option is not found in Organization settings but in the repository settings.

* Option C is incorrect because the "Template Repository" option is in the repository settings, not in Organization settings.

* Option D is incorrect because "Maintain" permissions do not grant the ability to create a repository template.
