Pass4sures is one of the leading platforms that has been helping Service Provider, Professional (JNCIP-SP) (JN0-664) exam candidates for many years. Over this long time period we have helped Service Provider, Professional (JNCIP-SP) (JN0-664) exam candidates in their preparation. They got help from Pass4sures Juniper JN0-664 Practice Questions and easily got success in the final Juniper JN0-664 certification exam. You can also trust Pass4sures Service Provider, Professional (JNCIP-SP) (JN0-664) exam dumps and start preparation with complete peace of mind and satisfaction.

The JN0-664 exam covers a wide range of topics, including OSPF, IS-IS, BGP, MPLS, Layer 2 VPNs, Layer 3 VPNs, Multicast, and Class of Service. Candidates must demonstrate their ability to configure, monitor, and troubleshoot these technologies at an expert level. JN0-664 Exam is challenging and requires a deep understanding of the technologies and protocols covered.

**Exam JN0-664 Labs | JN0-664 Valuable Feedback**

Pass4sures recognizes the acute stress the aspirants undergo to get trust worthy and authentic Service Provider, Professional (JNCIP-SP) (JN0-664) exam study material. They carry undue pressure with the very mention of appearing in the Juniper JN0-664 certification test. Here the Pass4sures come forward to prevent them from stressful experiences by providing excellent and top-rated Service Provider, Professional (JNCIP-SP) (JN0-664) practice test questions to help them hold the Service Provider, Professional (JNCIP-SP) (JN0-664) certificate with pride and honor.

## Juniper Service Provider, Professional (JNCIP-SP) Sample Questions (Q40-Q45):

### NEW QUESTION # 40

You are examining an L3VPN route that includes the information shown in the exhibit.  
Which statement is correct in this scenario?

- A. The information shows a Type 0 route distinguisher.
- B. The information shows a route target.
- C. The information shows a Type 2 route distinguisher.
- D. The information shows a Type 1 route distinguisher.

**Answer: D**

Explanation:

Type 1: When Type value is 1, the Administrator field is 4-bytes and Assigned Number field is 2- bytes.

The Administrator field should be set to the IP address (public IP addresses should be used). The Assigned Number field contains a number from a numbering space that is administered by the enterprise to which the IP address has been assigned by the appropriate authority.

### NEW QUESTION # 41

You are configuring anycast RP for load balancing and redundancy in your PIM-SM domain. You want to share active sources between RPs.

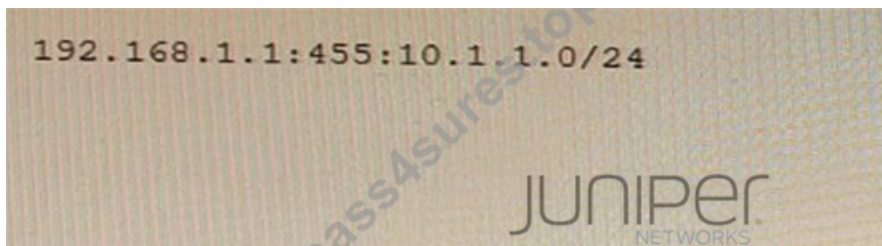

In this scenario, what are two solutions that will accomplish this task? (Choose two.)

- A. Configure MSDP on each RP router.
- B. Configure anycast PIM with the rp-set statement on each RP router.
- C. Configure anycast PIM with the rp-set statement on each source DR router.
- D. Configure MSDP on each source DR router.

**Answer: A,B**

### NEW QUESTION # 42

Exhibit

You are examining an L3VPN route that includes the information shown in the exhibit. Which statement is correct in this scenario?

- A. The information shows a route target
- B. The information shows a Type 2 route distinguisher.
- **C. The information shows a Type 1 route distinguisher.**
- D. The information shows a Type 0 route distinguisher

**Answer: C**

Explanation:

Type 1: When Type value is 1, the Administrator field is 4-bytes and Assigned Number field is 2-bytes. The Administrator field should be set to the IP address (public IP addresses should be used). The Assigned Number field contains a number from a numbering space that is administered by the enterprise to which the IP address has been assigned by the appropriate authority.

### NEW QUESTION # 43

Exhibit

You are asked to exchange routes between R1 and R4 as shown in the exhibit. These two routers use the same AS number. Which two steps will accomplish this task? (Choose two.)

- **A. Configure the BGP group with the as-override parameter on R2 and R3**
- B. Configure the BGP group with the as-override parameter on R1 and R4
- **C. Configure the BGP group with the advertise-peer-as parameter on R2 and R3.**
- D. Configure the BGP group with the advertise-peer-as parameter on R1 and R4.

**Answer: A,C**

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/routing-policy/bgp/topics/example/bgp-advertise-peer-as.html>

### NEW QUESTION # 44

You must alter class-of-service values in packets on the outbound interface of an edge router. In this scenario, which CoS component allows you to accomplish this task?

- **A. rewrite rules**
- B. forwarding classes
- C. scheduler
- D. output policer

**Answer: A**

Explanation:

Class of Service (CoS) in networking is used to manage traffic by classifying, scheduling, and sometimes modifying packets to ensure network performance and Quality of Service (QoS). Different CoS components are used to achieve these goals. Let's analyze each option to determine which CoS component allows you to alter class-of-service values on the outbound interface of an edge router.

1. **\*\*Output Policer\*\***:

- Policing is used to control the rate of traffic sent to or from a network interface. It can drop or remark traffic that exceeds a certain

rate.

- Policing is not typically used to alter CoS values but to enforce traffic limits.

2. **Scheduler**:

- A scheduler is responsible for managing the order in which packets are transmitted out of an interface based on their CoS markings. It can allocate bandwidth and prioritize traffic.

- The scheduler manages how packets are queued and sent but does not alter the CoS values of packets.

3. **Rewrite Rules**:

- Rewrite rules are used to modify the CoS values of packets, such as DSCP (Differentiated Services Code Point) or 802.1p bits, as they exit an interface.

- Rewrite rules can alter the class-of-service values in the packet headers to match the desired policies of the outbound interface.

- Therefore, rewrite rules are the correct component for altering CoS values on an outbound interface.

4. **Forwarding Classes**:

- Forwarding classes are used to categorize packets into different traffic classes within a router for QoS handling.

- They help in defining how packets should be treated by the scheduler but do not directly modify the CoS values.

**Conclusion**:

To alter class-of-service values in packets on the outbound interface of an edge router, the correct CoS component to use is:

**C. rewrite rules**
