156-536 Valid Test Camp - 156-536 Test Engine Version

If you have Dumpcollection 156-536 Exam Questions, you don't need a person to help you with reading and explaining the facts. This CheckPoint 156-536 exam questions material is available in pdf so that anyone can study it without any difficulty. On the other hand, to understand real exam's format, you can easily take Dumpcollection 156-536 Practice Exams. These Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) practice tests help you know how much you can score and if it is the right time to apply for the Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) certification exam or if you should wait for a little.

CheckPoint 156-536 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Deploying Harmony Endpoint Data Security Protection: In this domain, CheckPoint Security Administrators will demonstrate their skills in deploying data security protections within Harmony Endpoint. This includes configuring data loss prevention strategies and ensuring data integrity across endpoints.
Topic 2	<ul style="list-style-type: none"> Harmony Endpoint Management as a Service: This section targets Harmony Endpoint Security Professionals, focusing on managing endpoint security as a service. It covers the cloud-based management capabilities of Harmony Endpoint, allowing for scalable deployment and policy management.
Topic 3	<ul style="list-style-type: none"> Introduction to Harmony Endpoint: This section measures the skills of CheckPoint Security Administrators about the fundamental concepts of Harmony Endpoint. It introduces candidates to the capabilities of the Harmony Endpoint solution, which is designed to protect endpoint devices from various cyber threats.
Topic 4	<ul style="list-style-type: none"> Troubleshooting: In this final section, CheckPoint Security Administrators will demonstrate their troubleshooting skills related to Harmony Endpoint. This involves identifying and resolving issues that may arise during deployment or operation of the endpoint security solution.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q86-Q91):

NEW QUESTION # 86

Where are quarantined files stored?

- A. On client computer, under C:\Program Files\CheckPoint\Endpoint Security\Remediation\quarantine
- B. On client computer, under C:\ProgramData\CheckPoint\Endpoint Security\Remediation\quarantine
- C. On client computer, under C:\ProgramData\CheckPoint\Harmony Endpoint Security\quarantine
- D. On Management server, under \$FWDIR\sba\Remediation\quarantine

Answer: C

NEW QUESTION # 87

Full Disk Encryption (FDE) protects data at rest stored on a Hard Drive.

- A. SMB Share
- B. RAM Drive
- C. Hard Drive
- D. NFS Share

Answer: C

Explanation:

Full Disk Encryption (FDE) in Check Point Harmony Endpoint is designed to protect data at rest stored on the Hard Drive of desktops and laptops. This is explicitly outlined in the CP_R81.

20_Harmony_Endpoint_Server_AdminGuide.pdf on page 217, under the section "Check Point Full Disk Encryption," which states: "Combines Pre-boot protection, boot authentication, and strong encryption to make sure that only authorized users are given access to information stored on desktops and laptops." This indicates that FDE encrypts the entire hard drive, securing all data stored on it when the device is powered off or in a resting state. Further clarification comes from page 220, under "Volume Encryption," where it discusses encrypting "volumes," referring to the hard drive partitions:

"Volume Encryption - Enable this option to encrypt specified volumes on the endpoint computer." Since a hard drive is the primary local storage medium on endpoint devices, Option D ("Hard Drive") is the correct answer.

* Option A ("RAM Drive") is incorrect because RAM (Random Access Memory) is volatile memory that does not store data at rest; it loses data when power is off, unlike a hard drive.

* Option B ("SMB Share") and Option C ("NFS Share") are incorrect because these are network-based file shares (Server Message Block and Network File System, respectively), not local storage devices protected by FDE. FDE focuses on local hard drives, not network resources.

CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 217: "Check Point Full Disk Encryption" (describes protecting data stored on desktops and laptops).

CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 220: "Volume Encryption" (confirms encryption targets hard drive volumes).

NEW QUESTION # 88

The Check Point Harmony Product Suite is a suite of security products that includes?

- A. Harmony Endpoint (Cloud and On-Premises)
- B. Quantum Endpoint (Cloud)
- C. Quantum Spark
- D. Harmony Mobile (On-Premises)

Answer: A

Explanation:

The Check Point Harmony Product Suite includes Harmony Endpoint, which is available both as a Cloud- based and On-Premises security solution.

Exact Extract from Official Document:

"Harmony Endpoint is available as both Cloud-based and On-Premises deployment." Reference:Check Point Harmony Endpoint Specialist R81.20 Administration Guide, "Introduction to Harmony Endpoint."

NEW QUESTION # 89

With which release of Endpoint Client is the Anti-Malware engine based on Sophos instead of Kaspersky?

- A. Endpoint Client release E83.20 and higher for Cloud deployments
- B. Endpoint Client release E86.26 and higher for Cloud deployments
- C. Endpoint Client release E84.40 and higher for all deployments
- D. Endpoint Client release E81.20 and higher for On-premises deployments

Answer: C

NEW QUESTION # 90

What type of attack is Ransomware?

- A. Where an attacker decrypts files on a computer and demands payment for encryption key.
- B. Where a victim encrypts files on a computer and demands payment for decryption key from an attacker.
- C. Where an attacker encrypts files on a computer and demands payment for decryption key.
- D. Ransomware is not an attack.

Answer: C

Explanation:

Ransomware is a form of malicious software (malware) where an attacker encrypts the victim's data, rendering it inaccessible. The attacker then demands a ransom payment from the victim to provide the decryption key that will restore access to the data.

Exact Extract from Official Document:

"Before a Ransomware attack can encrypt files, Anti-Ransomware backs up your files to a safe location. After the attack is stopped, it deletes files involved in the attack and restores the original files from the backup location." This indicates that ransomware encrypts files, confirming that the attacker encrypts the files and demands a payment for a decryption key.
