

# 100% Pass Quiz 2026 Microsoft AZ-800: Efficient Administering Windows Server Hybrid Core Infrastructure Latest Test Braindumps

What's more, part of that ValidTorrent AZ-800 dumps now are free: <https://drive.google.com/open?id=1DQ7ri86n-m0efScNkgq1p-ELGxbp2mre>

Like the Web-based Administering Windows Server Hybrid Core Infrastructure practice exam, the Desktop AZ-800 practice test software of ValidTorrent provides its valuable customers with AZ-800 test questions which are very similar to the actual Administering Windows Server Hybrid Core Infrastructure exam questions. There is no hustle. The Administering Windows Server Hybrid Core Infrastructure AZ-800 Practice Test material is updated and created after feedback from more than 90,000 professionals around the globe. A free demo of any Administering Windows Server Hybrid Core Infrastructure exam dumps format will be provided by ValidTorrent to the one who wants to assess before purchasing.

One of the key benefits of earning the Microsoft AZ-800 certification is that it demonstrates your expertise in hybrid infrastructure management. Administering Windows Server Hybrid Core Infrastructure certification is recognized by employers around the world, and it can lead to new career opportunities and higher salaries. Additionally, the skills and knowledge you gain while preparing for the exam can help you become a more valuable asset to your current employer, as you will be able to contribute more effectively to hybrid cloud projects.

The Microsoft AZ-800 Exam requires candidates to demonstrate their proficiency in several key areas. These include managing Windows Server workloads in hybrid environments, implementing and managing Azure solutions, and planning and implementing migration strategies. Additionally, candidates must be able to monitor and optimize performance, as well as troubleshoot issues that may arise.

## Realistic Microsoft AZ-800 Latest Test Braindumps Free PDF

As a main supplier for AZ-800 Certification Exam training, ValidTorrent's AZ-800 experts continually provide you the high quality product and a free online customer service, but also update the exam outline with the fastest speed.

Microsoft AZ-800 Certification Exam is designed for IT professionals with experience in managing Windows Server infrastructures. Candidates should have a solid understanding of Windows Server administration, including Active Directory, networking, and security. Additionally, candidates should have experience working with cloud-based solutions, including Microsoft Azure and Microsoft 365.

## Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q58-Q63):

### NEW QUESTION # 58

You have an Azure virtual machine named VM1 that runs Windows Server and has the following configurations:

Size: D2s\_v4

Operating system disk: 127-GiB standard SSD

Data disk 128-GiB standard SSD

Virtual machine generation: Gen 2

You plan to perform the following changes to VM1:

Change the virtual machine size to D4s\_v4.

Detach the data disk.

Add a new standard SSD.

Which changes require downtime for VM1?

- A. Changing the virtual machine size only.
- B. Detaching the data disk only and adding a new standard SSD.
- C. Detaching the data disk only.
- D. Adding a new standard SSD only.

**Answer: A**

Explanation:

Data disks can be added and detached without requiring downtime. Changing the VM size requires the VM to be restarted.

### NEW QUESTION # 59

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.

You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

- \* Ensures that a user named User1 can perform the RODC installation on Server1
- \* Ensures that you can control the AD DS replication schedule to the Server1
- \* Ensures that Server1 is in a new site named RemoteSite1
- \* Uses the principle of least privilege

Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.	
Create a site and a subnet.	
Create a site link.	
Pre-create an RODC account.	
Add User1 to the Contoso\Administrators group.	

**Answer:**

Explanation:

### Actions

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Create a site and a subnet.

Create a site link.

Pre-create an RODC account.

Add User1 to the Contoso\Administrators group.

### Answer Area

Create a site and a subnet.

Pre-create an RODC account.

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

➤
➤

Explanation:

### Create a site and a subnet.

### Pre-create an RODC account.

### Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Box 1.

We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.

Box 2.

When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.

Box3.

User1 can connect the RODC to the prestaged account by running the AD DS installation wizard.

#### NEW QUESTION # 60

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com and the servers shown in the following table.

Name	Domain	Description
DC1	contoso.com	Has the schema master, infrastructure master, and domain naming master roles
DC2	east.contoso.com	Has the PDC emulator and RID master roles and is a global catalog server
Server1	contoso.com	Has the File Server, DFS Namespaces, and DFS Replication server roles

You need to create a folder for the Central Store to manage Group Policy template files for the entire forest.

What should you name the folder, and on which server should you create the folder? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

Name:  These are the selections for Name:

- CentralDefinitions
- PolicyDefinitions
- TemplateDefinitions

Server:

- DC1 only
- DC2 only
- Server1 only
- DC1 and DC2 only
- DC1, DC2, and Server1

**Answer:**

**Explanation:**  
**Answer Area**

**Answer Area**

Name:  These are the selections for Name:

- CentralDefinitions
- PolicyDefinitions
- TemplateDefinitions

Server:

- DC1 only
- DC2 only
- Server1 only
- DC1 and DC2 only
- DC1, DC2, and Server1

**Explanation**

**Answer Area**

Name:

Server:

### NEW QUESTION # 61

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains the domain controllers shown in the following table.

Name	Description
DC1	PDC emulator, RID master, and global catalog server
DC2	Infrastructure master and domain naming master
DC3	Schema master
RODC1	Read-only domain controller (RODC)

You need to ensure that if an attacker compromises the computer account of RODC1, the attacker cannot view the Employee-Number AD DS attribute. Which partition should you modify?

- A. configuration
- B. global catalog
- C. schema
- D. domain

**Answer: C**

### NEW QUESTION # 62

You have a server named Server1 that runs Windows Server and has the Active Directory Federation Services role installed.

You plan to deploy Web Application Proxy to a server named Server2.

You export the Active Directory Federation Services (AD FS) certificate from Server1.

Which actions should you perform on Server2 in sequence? To answer, drag the appropriate actions to the correct order. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions

- Install the Remote Access role.
- Install the Active Directory Federation Services role.
- Run the Web Application Proxy Configuration Wizard.
- Install Microsoft Application Request Routing (ARR) for IIS.
- Run the Active Directory Federation Services Configuration Wizard.

Answer Area

Step 1:

Step 2: Import the AD FS certificate to Server2.

Step 3:

**Answer:**

**Explanation:**

Actions

- Install the Remote Access role.
- Install the Active Directory Federation Services role.
- Run the Web Application Proxy Configuration Wizard.
- Install Microsoft Application Request Routing (ARR) for IIS.
- Run the Active Directory Federation Services Configuration Wizard.

Answer Area

Step 1: Install the Active Directory Federation Services role.

Step 2: Import the AD FS certificate to Server2.

Step 3: Install the Remote Access role.
