Acquia Drupal-Site-Builder Exam Dumps - Get Success Itexamguide Minimal Effort

The reason why many people choose Itexamguide is that Itexamguide brings more convenience. IT elites of Itexamguide use their professional eye to search the latest Drupal-Site-Builder certification training materials, which ensure the accuracy of our Drupal-Site-Builder Exam Dumps. If you still worry, you can download Drupal-Site-Builder free demo before purchase.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q47-Q52):

NEW QUESTION # 47

You installed a new site using the Spanish language. You added new fields to article content type alongside the default fields. The custom fields labels are in Spanish.

Which of the following statements is true when you add the French language to your site?

- A. Drupal will handle translation of content configuration for custom fields automatically. Built-in fields will need to be translated manually.
- B. All content configurations should be translated to French manually.
- C. Drupal will handle translations of both built in and custom field configurations to French automatically.
- **D. Drupal will handle translation of content configuration for built-in fields automatically. Custom fields will have to be translated manually.**

Answer: D

Explanation:

Drupal distinguishes between interface text and configuration text. The built-in labels and other text that come from Drupal core, modules, and themes are handled by the Interface Translation system, and Drupal can download those translations for added languages. The Drupal User Guide explains that this built-in text is typically translated by downloading available translations rather than translating it yourself.

By contrast, field labels are configuration. Drupal's multilingual documentation says that configuration text includes items such as labels for fields in your content types, and the Configuration Translation module provides the interface to translate that configuration into other languages. It also specifically lists Content fields as translatable configuration elements. That means field labels you created yourself in Spanish are not automatically translated into French just because French is added; they must be translated through configuration translation.

So, when French is added, Drupal can automatically provide translations for built-in field/interface text where translations exist, but custom field configuration labels still require manual translation. Therefore, option C is the correct answer.

NEW QUESTION # 48

Your tennis club would like to publish details about upcoming competition events. Each event needs a title, description, scheduled date, image, and contact information. This content will need to be searchable, sortable, and displayed in multiple formats on the site. How do you structure this content to meet the requirements?

- A. Create custom content types for each field and add a taxonomy term reference with common event name terms to link the nodes.
- B. Create a custom content type called Event with title and body fields; use blocks to display date, image and contact information.
- C. Use the Article content type to publish event data in the body field and group these nodes under a custom menu called "Events".
- **D. Create a custom content type called "Event" with fields for each discrete data element.**

Answer: D

Explanation:

Drupal 10 and Drupal 11 documentation recommends planning content structure by identifying each kind of content and then creating an appropriate content type with separate fields for each distinct piece of information. Drupal's User Guide explains that content entities are made up of fields, and that when you add a content type, you can then add fields such as date, image, link, text, and other structured values. This structured approach is what makes content easier to manage, search, sort, reuse in Views, and display in different ways.

For an events use case, the correct model is a single Event content type with discrete fields for title, description, scheduled date, image, and contact information. Storing all event details in one body field or splitting them into unrelated content types would make sorting and display much harder. Drupal's planning guidance also says to choose the content entity type based on how the content will be used and edited, while blocks are better for reusable page-region content, not for primary structured records like event listings.

NEW QUESTION # 49

You have a website which is using a custom theme made specifically for that website. The client complains that content creators see an admin theme called "Claro" while creating or editing content. They want to see the content edit page in their own custom theme, but keep the other admin section in the Claro theme.

How can you achieve this?

- A. Give the Content Creator role permission to "View Admin Theme"
- B. On the Appearance page set admin theme as default theme
- **C. On Appearance page, unselect the checkbox "See the administration theme when editing or creating content"**
- D. Revoke the permission of viewing the custom theme for content creator role.

Answer: C

Explanation:

Drupal core provides a specific setting for whether node add/edit forms should use the administration theme.

On the Appearance page, this is the checkbox labeled "Use the administration theme when editing or creating content". When that setting is enabled, content creation and editing routes are treated as admin-theme routes; when it is disabled, those forms use the site's default front-end theme instead, while the rest of the administration area can still use the admin theme such as Claro. This behavior is implemented in core through the node.settings configuration value use_admin_theme and the node route subscriber that

marks node operation routes as admin routes only when that setting is turned on. That makes option A correct. Option B would not solve the requirement, because setting the admin theme as the default theme would affect the whole site's front-end presentation. Options C and D are incorrect because Drupal does not use a role permission like "View Admin Theme" to control this behavior for node edit pages. The documented control for this requirement is the Appearance-page checkbox tied to `node.settings.use_admin_theme`.

NEW QUESTION # 50

You are building a recipe site in which users submit their favorite recipes as nodes, tagged with common ingredients from a carefully curated taxonomy vocabulary. You've been asked to create a page on which site visitors can select the ingredients they have on hand and view all the site's recipes that use those ingredients.

You've already created a view listing all Recipe nodes.

How can you modify the view to support filtering by ingredient?

- A. For each ingredient, create a separate view display with a contextual filter to limit results by that ingredient.
- B. Include a "Combine fields" filter that searches all fields for the ingredient name(s) the user enters.
- C. Create a filter using the Recipe content type's "Ingredients" field. Expose the filter to users, making sure it allows multiple selections.
- D. Add a menu block listing all ingredients. Each item in the menu block should link to a subdirectory URL associated with the listed ingredient.

Answer: C

Explanation:

Drupal's recommended way to let visitors narrow a Views listing by a field value is to add that field as a filter criterion and then expose the filter to site visitors. The core Views documentation explains that filters can be exposed so users can interact with the data shown in the view, instead of hard-coding separate displays or relying on free-text searching.

This question specifically says the recipes are tagged with a curated taxonomy vocabulary of ingredients.

Drupal's User Guide uses Ingredients as an example of a field that should be a taxonomy term reference, because the allowed values come from a managed list that can grow over time. That means the correct filter is the Recipe content type's Ingredients taxonomy-reference field in the View. Since visitors should be able to choose the ingredients they have on hand, the exposed filter should allow multiple selections.

The other options are not the standard Drupal site-building solution. Separate displays per ingredient do not scale, a combined-text search is not a structured taxonomy filter, and a menu block is navigation rather than a proper Views filter.

NEW QUESTION # 51

The site you are managing has a "Comments approval" process. You have moderators with appropriate permissions to review and approve comments. The moderators want to see all the unapproved comments sorted by the node on which they are posted, but they can't do this on the Comments approval page.

What is the simplest way to solve this problem?

- A. Create a View of unapproved comments and set the sort order to "Entity ID."
- B. Create an Export view, so the content editor can review comments in a spreadsheet.
- C. Have the content editor review comments by visiting the node instead of using the Comments page.
- D. Edit the Comments View, and update the table settings to make the Entity ID field sortable.

Answer: D

Explanation:

In Drupal 10 and Drupal 11, the administrative Comments listing is provided by the core comment View. In core's default `views.view.comment` configuration, the comments administration display uses the table style, includes the `entity_id` field labeled "Posted in", and that column is present in the table configuration.

However, core sets that column's table option to `sortable: false`, while other columns such as Subject, Author, and Updated are sortable. That is why moderators cannot sort the approval page by the content item the comment belongs to, even though the field is already there.

Because the existing approval page already uses a View, the simplest solution is to edit that View and enable sorting for the Entity ID / Posted in column in the table settings. Creating a brand-new View would work, but it is not the simplest option because it duplicates an existing administrative display. The other options do not address the actual issue with the current moderation screen. Drupal's content administration documentation also confirms that comments are managed from the Comments administration page,

making improvement of that interface the most appropriate site-building solution.

NEW QUESTION # 52

.....

The software boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our Drupal-Site-Builder exam torrent boosts timing function and the function to stimulate the exam. Our product sets the timer to stimulate the exam to adjust the speed and keep alert. Our Drupal-Site-Builder study questions have simplified the complicated notions and add the instances, the stimulation and the diagrams to explain any hard-to-explain contents.

Certification Drupal-Site-Builder Sample Questions: https://www.itexamguide.com/Drupal-Site-Builder_braindumps.html

In addition, our Drupal-Site-Builder provides end users with real questions and answers, Acquia Study Guide Drupal-Site-Builder Pdf So you can study anywhere, anytime, We provide the warm and 24-hours online service for every buyer who has any question about our Drupal-Site-Builder test preparation files, Our PDF version, online test engine and windows software of the Certification Drupal-Site-Builder Sample Questions - Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 study materials have no restrictions to your usage, Drupal-Site-Builder Practice Exam Downloadable, Printable.

This type of feedback often vastly outweighs Drupal-Site-Builder positive statements made by the organization about its products and services in traditional marketing venues such as advertising, Reliable Drupal-Site-Builder Exam Voucher and is worth more than the expensive ad campaigns needed to attract new customers.

Real Acquia Drupal-Site-Builder Dumps PDF Format

Both Pete and Wendy highlighted GoGuardian and Lightspeed as good options for parent communications, In addition, our Drupal-Site-Builder provides end users with real questions and answers.

So you can study anywhere, anytime, We provide the warm and 24-hours online service for every buyer who has any question about our Drupal-Site-Builder test preparation files.
